Docket No. 50-244-

Rochester Gas and Electric Corporation
ATTN: Mr. Robert C. Mecredy
General Manager
Nuclear Production
49 East Avenue
Rochester, New York 14649

Gentlemen:

Subject: NRC Inspection Report No. 50-244/89-07

A routine inspection was conducted at Ginna Station on April 24-28, 1989, to review radiation safety during the extended outage. Areas reviewed included: qualification of contracted technicians; control of work; ALARA; and control of locked high radiation areas.

Within the scope of this review, no violations were observed. Your staff indicated that in response to NRC comments during this and previous inspections, a thorough review of ALARA programs would commence after the outage. Changes are anticipated that will significantly enhance ALARA performance. We encourage these efforts and will review your progress in future inspections.

No reply to this report is required. Your cooperation with us in this matter is appreciated.

Sincerely,

Original Signed By:
Ronald R. Bellamy
