Subject: Inservice Pump and Valve Testing Program
R.E. Ginna Nuclear Power Plant
Docket Number 50-244

Dear Mr. Lear:

Enclosed is Revision 7 to the Ginna Station Quality Assurance Manual, Appendix C, which describes the Inservice Pump and Valve Testing Program for the January 1, 1981 through December 31, 1989 testing period. This revision further revises Revisions 3, 3A, 4 and 6 submitted on December 21, 1982, June 20, 1983, December 21, 1983 and June 3, 1985 respectively. The changes are essentially threefold and include (1) adding on page 17, containment isolation valve 1793 which had been inadvertently omitted from Appendix C and Technical Specifications (2) page 24 adds suffixes to two valve numbers for consistency with the P&ID (3) page 34 provides an exemption for leak testing of ECCS check valves based on a recent change to Technical Specifications. The changes are shown by a solid line in the left-hand margin on pages 17, 24, 33 and 34. Although the margin lines identify only the location of Revision 7 changes, the submittal contains all pages of the current Pump and Valve Testing Program.

Very truly yours,

Roger W. Kober
Vice President
Electric & Steam Production
