

JUL 30 1991

Docket No. 50-244

Rochester Gas and Electric Corporation
ATTN: Dr. Robert C. Mecredy
Vice President
Ginna Nuclear Production
89 East Avenue
Rochester, New York 14649

Dear Dr. Mecredy:

Subject: NRC Inspection Report No. 50-244/91-13

This refers to the routine inspection conducted by Mr. J. Carrasco of this office on May 20-24, 1991, at R. E. Ginna Nuclear Power Plant, Ontario, New York. The findings were discussed with you and other members of your staff at the conclusion of the inspection.

Areas examined during this inspection are described in the NRC Region I inspection report which is enclosed with this letter. The inspection consisted of selected examination of procedures and representative records, interviews with personnel, and observation by the inspector. Within the scope of this inspection, no violations were identified. In following up of Bulletin 82-02, the inspector noted that only visual inspection is performed on the steam generator manway studs prior to reuse. We understand that this practice will be reviewed and, although not a requirement, consideration will be given to performing a surface examination such as MT or PT of these fasteners prior to reuse.

No reply to this letter is required. Your cooperation with us in this matter is appreciated.

Sincerely,

Jacque P. Durr, Chief
Engineering Branch
Division of Reactor Safety
