Vice President, Ginna Nuclear Production
Rochester Gas and Electric Corporation
89 East Avenue
Rochester, NY 14649

SUBJECT: NRC INSPECTION NO. 50-244/95-09

Dear Dr. Mecredy:

This letter refers to the radiological controls inspection during outage conditions conducted by Mr. J. Noggle of this office on April 3 - 7, 1995 of activities authorized by NRC License No. DPR-18 at the Ginna Nuclear Power Plant and to the discussions of our findings held by Mr. J. Noggle with Mr. J. Widay and other members of your staff on April 7, 1995.

Areas examined in this inspection are important to public health and safety, and are described in the NRC Region I Inspection Report which is enclosed with this letter. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector.

Within the scope of this inspection, you had in place effective radiological control of work performed during the Spring 1995 refueling outage. Good detail in radiological controls was evident and the initial outage performance of the Radose computerized electronic dosimetry access control system was very good. Your staff has identified contamination associated with both the "A" and "B" condensers. The final disposition of the old tube sheets and condenser tubes had not been determined at the time of the inspection and will be followed in subsequent inspections. In addition, discussions with your staff were held with respect to soil excavations on the east side of the reactor building where soil is known to be contaminated. Depending on alternatives chosen, disposition of this soil may need approval from the State of New York.

No safety concerns or violations of regulatory requirements were observed. No response to this letter is required.

Your cooperation with us is appreciated.

Sincerely,
