EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 1 2 During surveillance testing of 1A Diesel Generator, the solenoid-operated fill valve (SE-17-1A) for the engine mounted fuel oil tank failed to open, causing tank level to drop below the T.S. limit. (This does not prevent diesel operation). ACTION per T.S. 3.8.1.1 was initiated and tank level was restored to normal by taking manual control of the bypass valve around SE-17-1A. Valve SE-17-1A was repaired and returned to normal service in 3.5 hrs. This is the first occurrence of this type.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 1 0 Valve SE-17-1A failed to open due to burnt contacts in the relay that signals this valve to open on dropping tank level. Manual control was taken on the bypass valve around SE-17-1A to control tank level. The relay was replaced and tested satisfactorily. The tank has a low level alarm that signals operators to refill the tank.
