Attention: G. C. Sorensen, Manager
Regulatory Programs

Subject: NRC INSPECTION REPORT 50-397/91-32

On December 2 - 6, 1991, L. R. Norderhaug of this office conducted an announced, initial inspection of your Fitness for Duty program (FFD) at the Washington Nuclear Project, Number 2. At the conclusion of the inspection visit on December 6, 1991, the inspector discussed the preliminary findings with members of your organization as identified in the enclosed report.

The inspection consisted of selective examinations of Supply System Directive No. 4.6 "Fitness for Duty", associated procedures from your General Information Handbook, Human Resources Instructions and Plant Administrative Procedures, interviews with employees and contractors, observations of your site collection facilities, and review of pertinent records and reports.

Based on this inspection, we have determined that the development and implementation of your FFD program are responsive to both the spirit and intent of the FFD rule. As described in the enclosed report, we are pleased to note the professionalism and technical expertise exhibited by personnel involved in administering (and auditing) the program, and the degree to which employees are aware and use your Employee Assistance Program.

Within the scope of this inspection, no violations of NRC requirements were identified. However, several weaknesses and procedural inconsistencies identified by your recent internal audits will be reviewed in the course of future inspections.

In accordance with Section 2.790 of the NRC's "Rules of Practice" Part 2, Title 10, Code of Federal Regulations, a copy of this letter and its enclosures will be placed in the NRC Public Document Room.
