INTRODUCTION

The Inservice Testing Program for Palo Verde Nuclear Generating Station was developed in compliance with the rules and regulations of 10CFR50.55a and Section XI of the ASME Boiler and Pressure Vessel Code, 1980 Edition Winter of 1980 Addenda. Where these rules were determined to be impractical, specific relief was written.

Section 1.0 discusses the Inservice Testing Program of applicable ASME Class 1, 2 and 3 pumps. Section 2.0 discusses the Inservice Testing Program of applicable ASME Class 1, 2 and 3 valves.

1.0 INSERVICE TESTING OF PUMPS

1.1 General Information

The Inservice Testing Program for ASME Class 1, 2 and 3 pumps was developed in accordance with, and meets the requirements of ASME Boiler and Pressure Vessel Code, Section XI, Subsection IWP, 1980 Edition through Winter 1980 Addenda.

The Inservice Testing Program for pumps will remain in effect through the next 10 year inservice inspection interval.

Section 3.1 lists all Class 1, 2 and 3 pumps which are to be tested, along with the applicable parameters to be measured.

1.2 Program Information

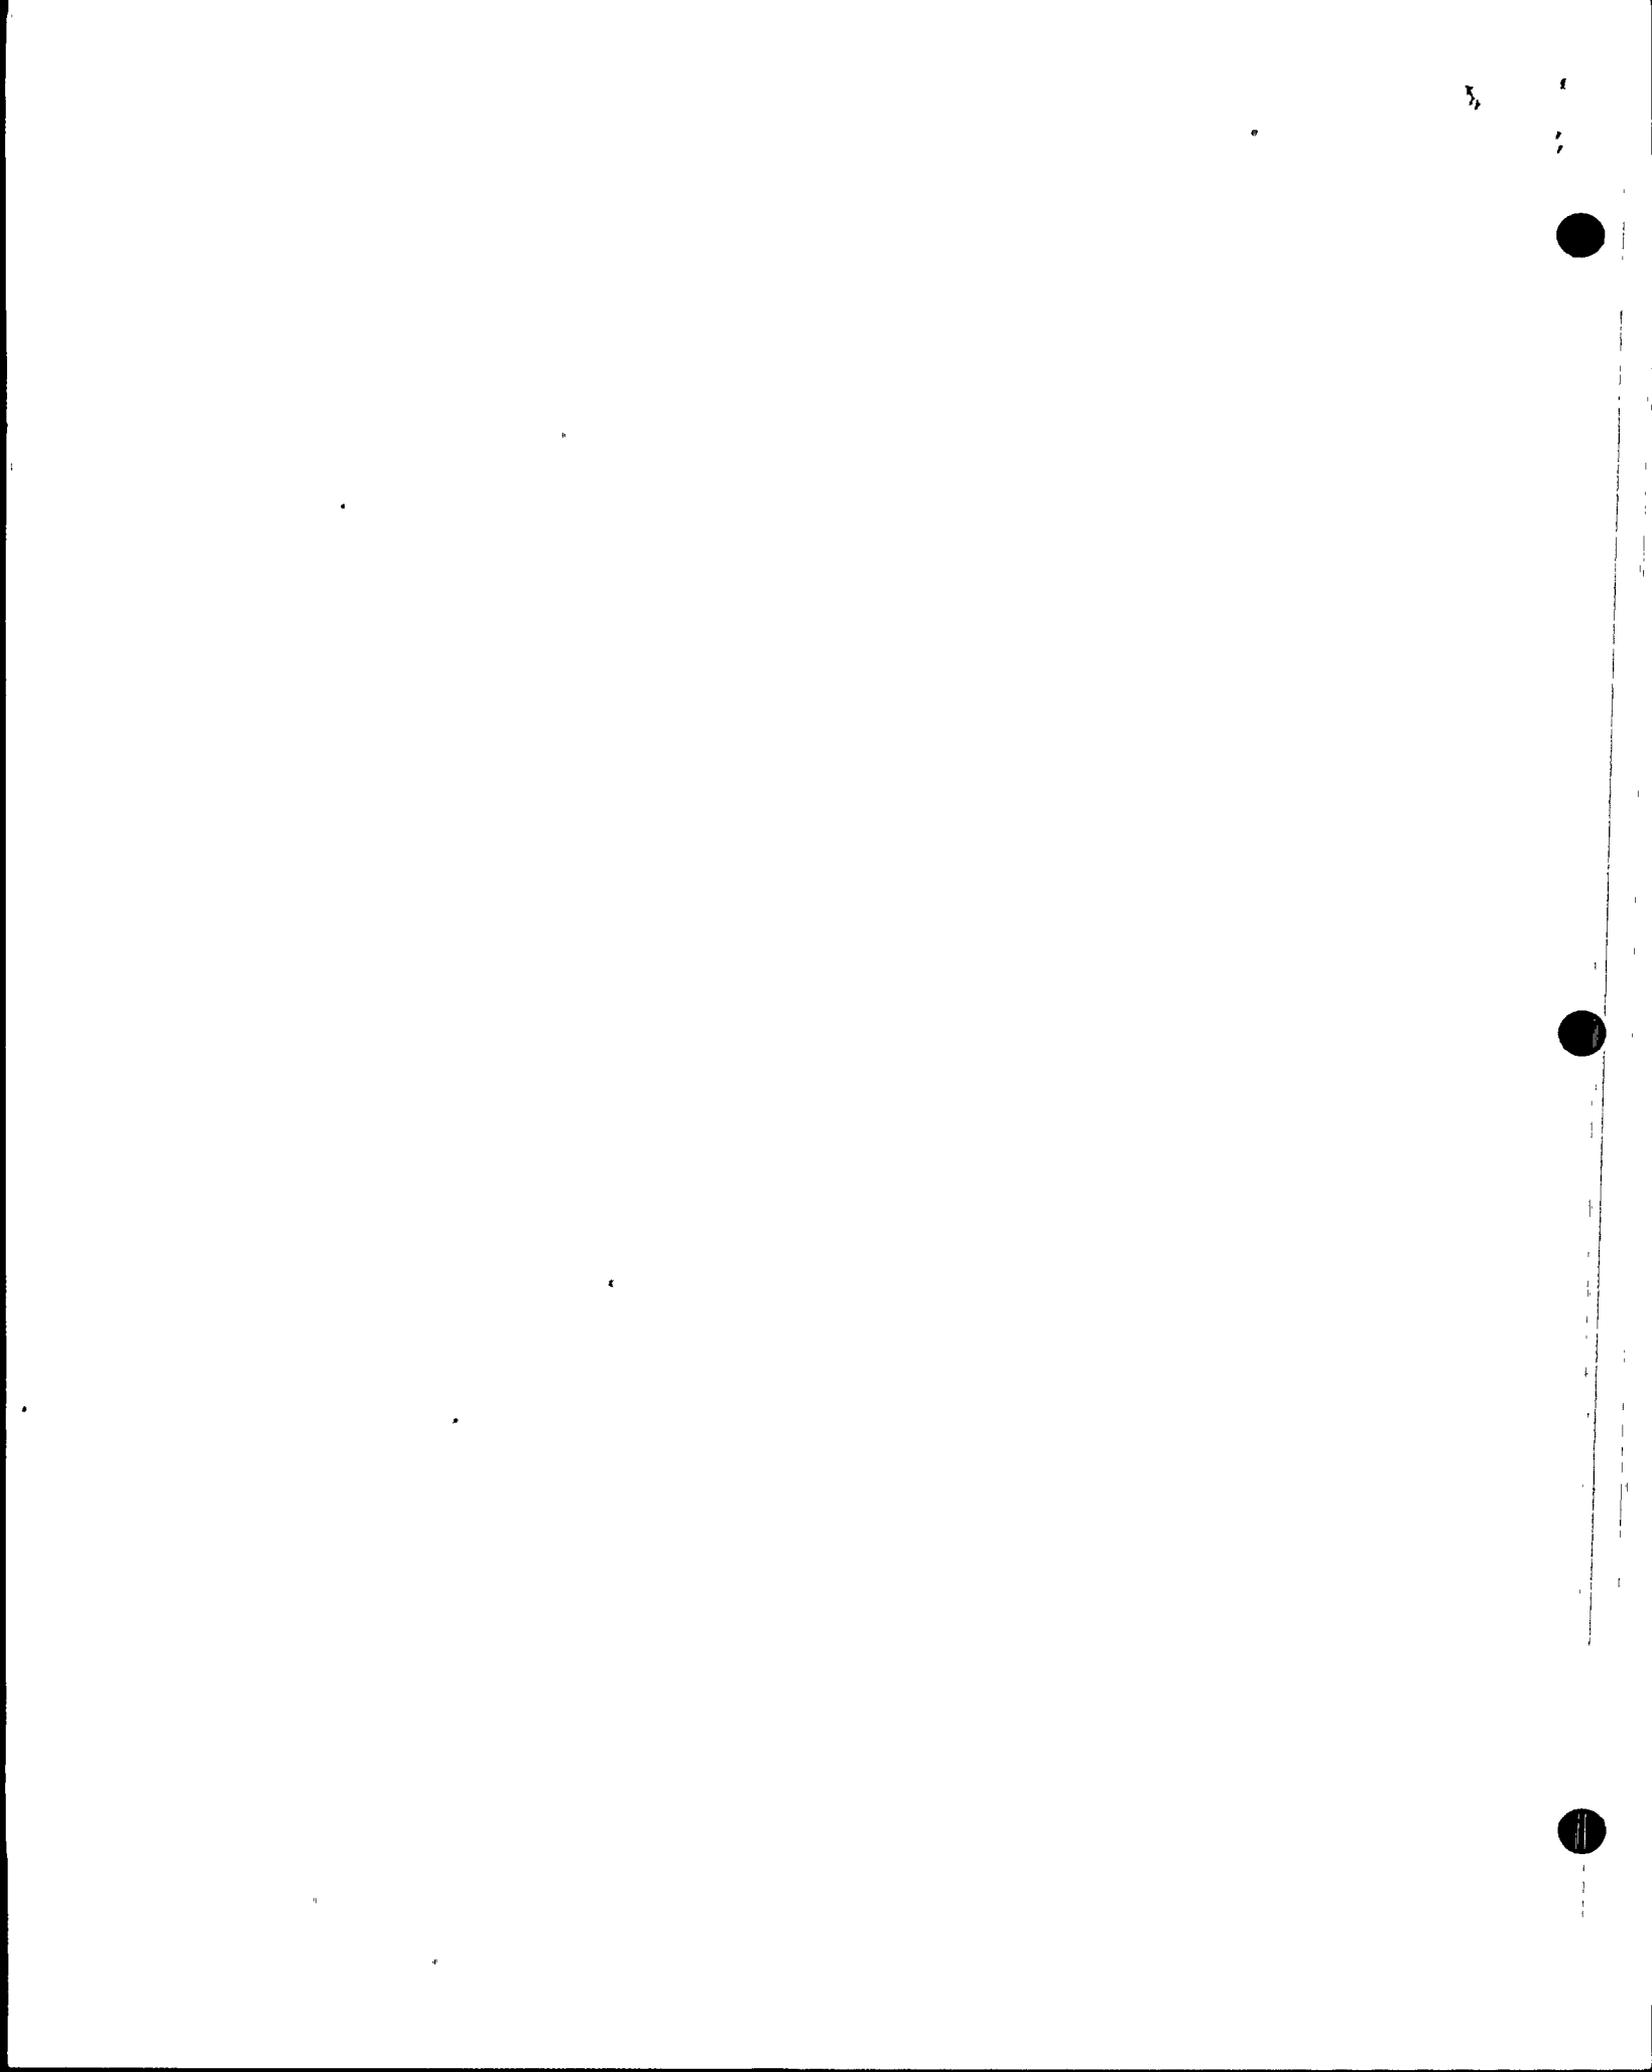

The following information is included in the Inservice Testing Program for pumps:

- A. Pump Number lists the pump identification number as shown on the P&ID's.
- B. Pump Name describes the pump's functional identification as it is related to system operation.
- C. ISI Class is the Owner's classification of the pump per ISI requirements.
- D. Test Parameters indicates the required test quantities required per Table IWP-3100-1.*
- E. Notes are general statements which can be referred to in the ISI Testing Program.

1.3 Test Frequency

An inservice test shall be run on each pump nominally every three months during plant operation. If this frequency can reasonably be accomplished during shutdown periods it will be, however, this is not mandatory. Where a pump is not tested on a three month frequency during plant shutdown, it will be tested prior to declaring the system operable, per Technical Specifications.

*These quantities will be either measured, observed, or calculated (denoted by "M", "O", or "C" in the ISI Testing Program). "PRR-(1)" will denote a specific request for relief concerning that parameter.

1.4 Request for Relief

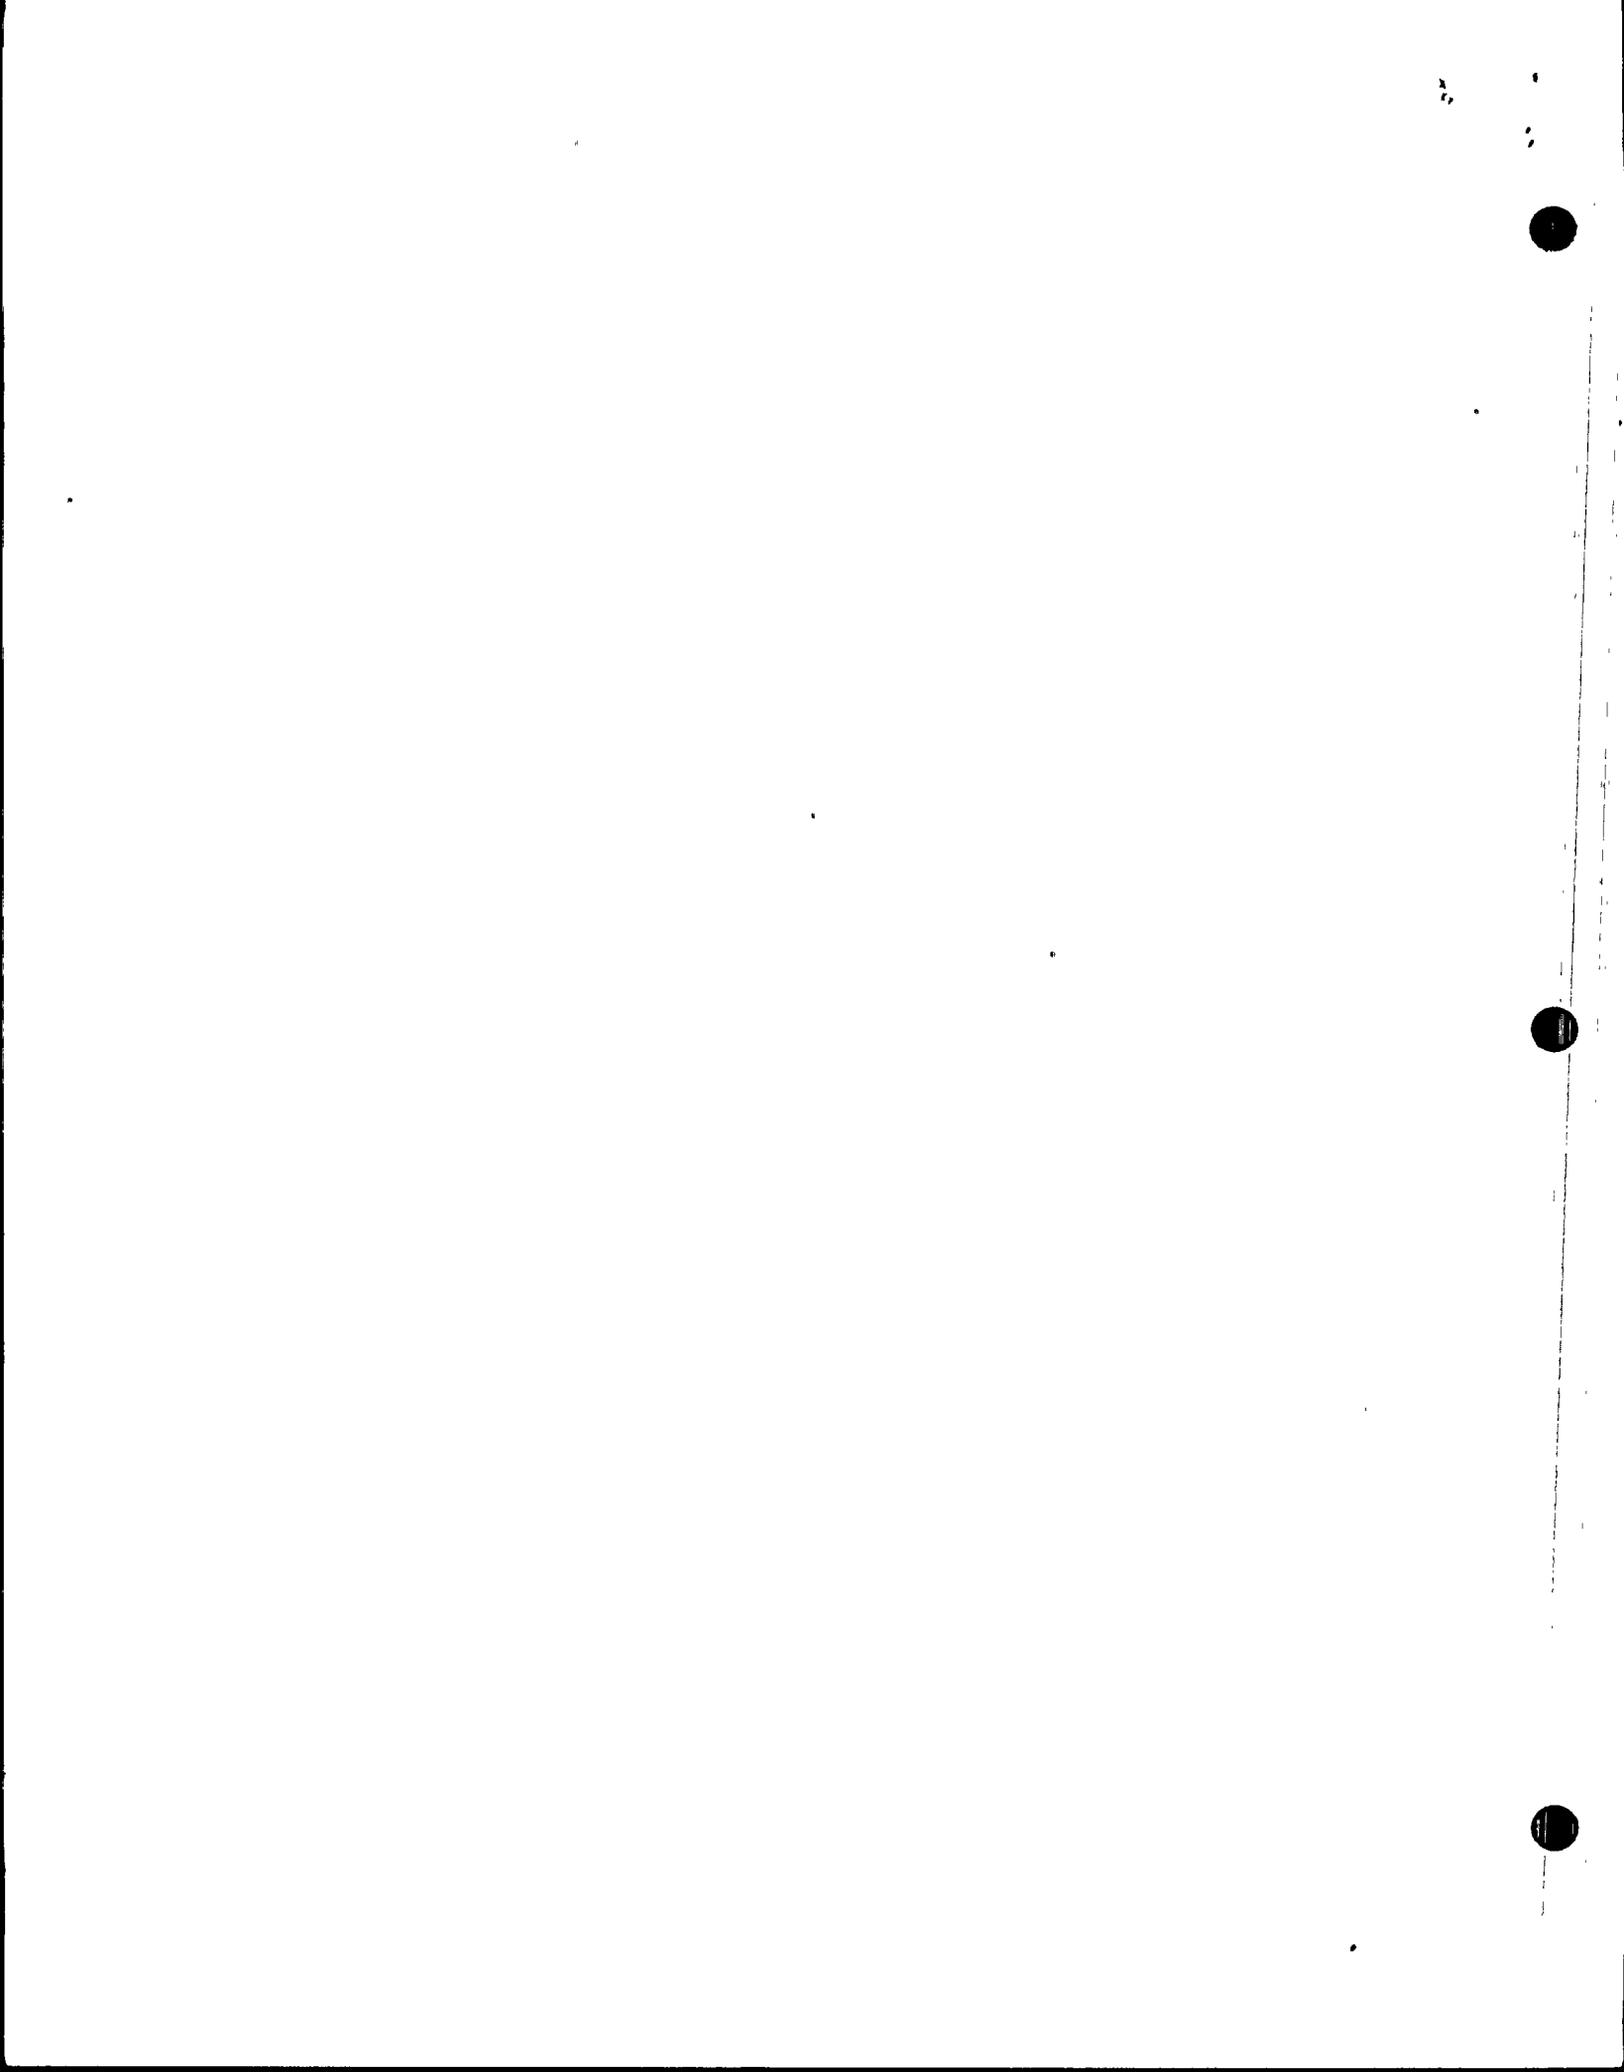

Where ASME Section XI requirements were determined to be impractical, a request for relief was written.

Where relief from an ASME Code requirement is granted within the provisions of 10CFR50.55a (g) (6) (i), it will be incorporated into the Palo Verde Inservice Testing Program.

Relief requests are shown in Appendix A.

1.5 Special Test

Where a pump is operated more frequently than every 3 months, it need not be stopped for a special test, provided the requirements of IWP-3400b are met.

- I. Stroke Direction indicates the direction which an active valve must stroke to perform its safety function. Also, the direction in which the valve will be stroked to satisfy the exercising requirements of IWV-3410 or IWV-3520. This may be specified as open (O), closed (C) or both (O/C).
- J. Test lists the test or tests that will be performed for each valve to fulfill the requirements of Sub-section IWV.

Appendix J Leak Test (AJLT)

Valve will be leak tested in accordance with 10CFR50, Appendix J requirements.

Full Stroke Test (FST)

Valve will be full stroke exercised for operability in the direction necessary to fulfill its safety function.

Partial Stroke Test (PST)

Valve will be partial stroke exercised when full stroke exercising is impractical.

Fail-Safe Test (FT)

All valves with fail-safe actuators will be tested to verify proper fail-safe operation upon loss of actuator power.

Verify Position Indicator (VPI)

Automatically actuated valves with remote indication will be verified in accordance with IWV-3300.

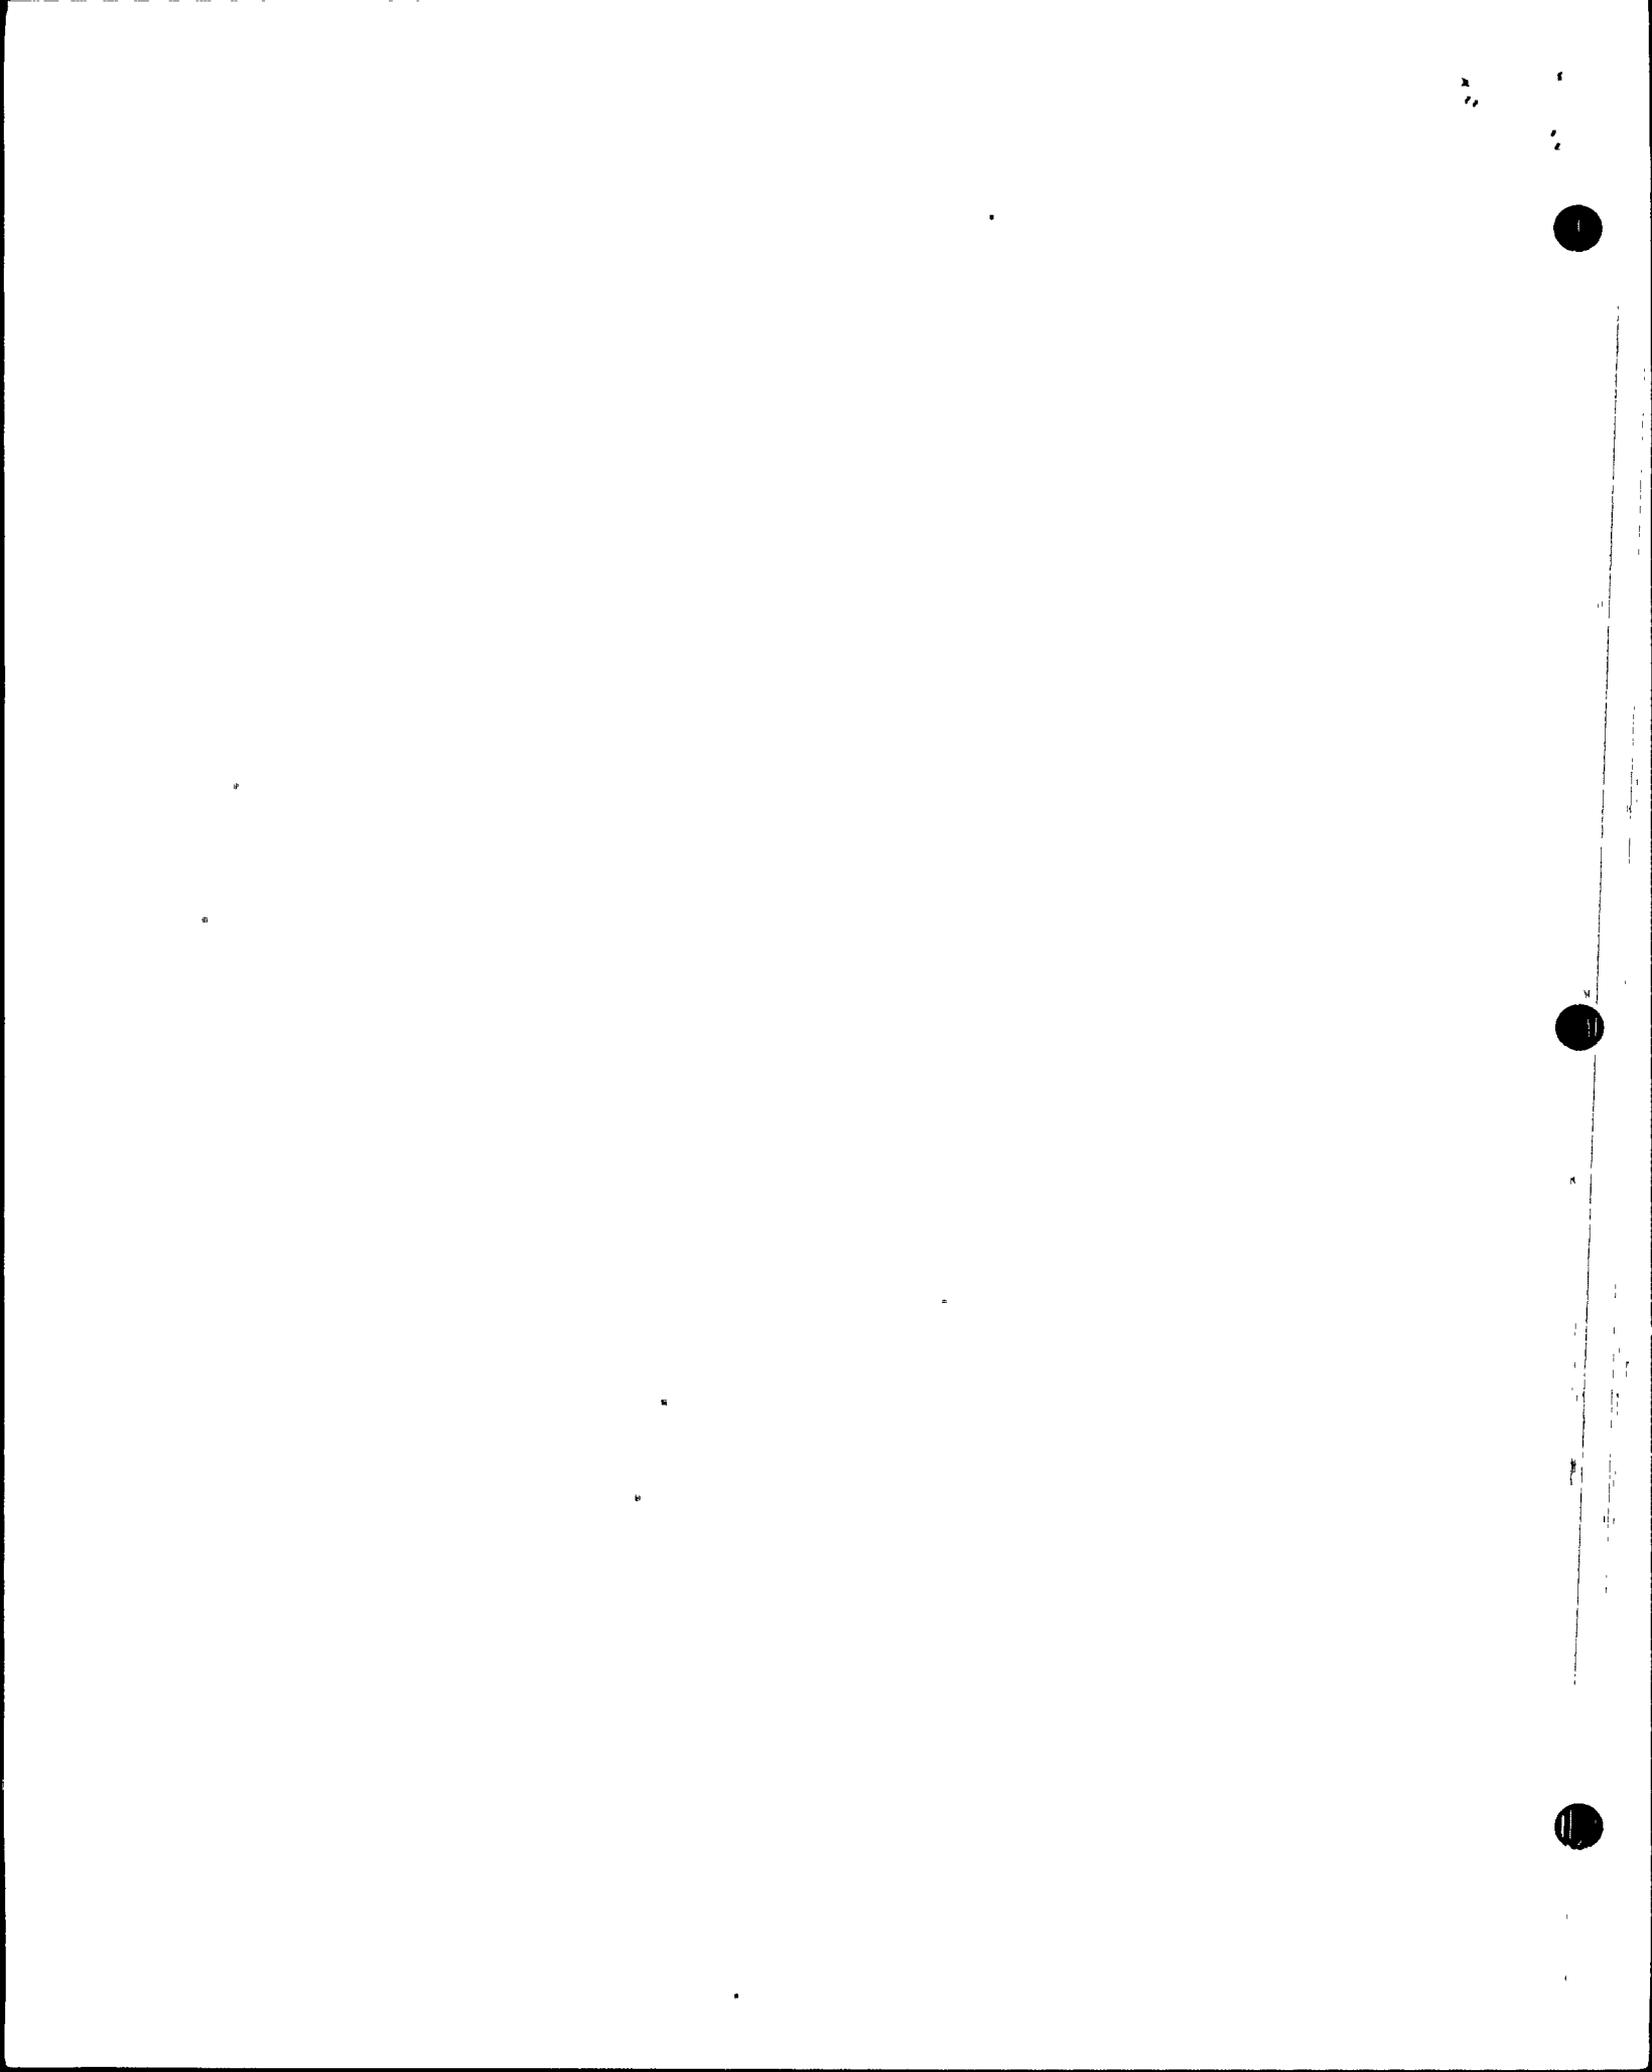

Pressure Safety Valve Testing (PSVT)

Relief and safety valve set points will be verified in accordance with IWV-3510. Category "A" relief and safety valves will be exempted from seat leak test when this test is performed.

- K. Test Mode indicated the frequency at which the preceding mentioned tests will be performed. The following abbreviations are used:

Cold Shutdown (CS)

Valve testing at cold shutdown is valve testing which commences not later than seventy-two (72) hours after cold shutdown and continues until

2.0 INSERVICE TESTING OF VALVES

2.1 General Information

The Inservice Testing Program for ASME Class 1, 2 and 3 valves was developed in accordance with, and meets the requirements of ASME Boiler and Pressure Vessel Code, Section XI, Subsection IWV, 1980 Edition. Through Winter 1980 Addenda.

The Inservice Testing Program for valves will remain in effect throughout the next 10 year inservice inspection interval.

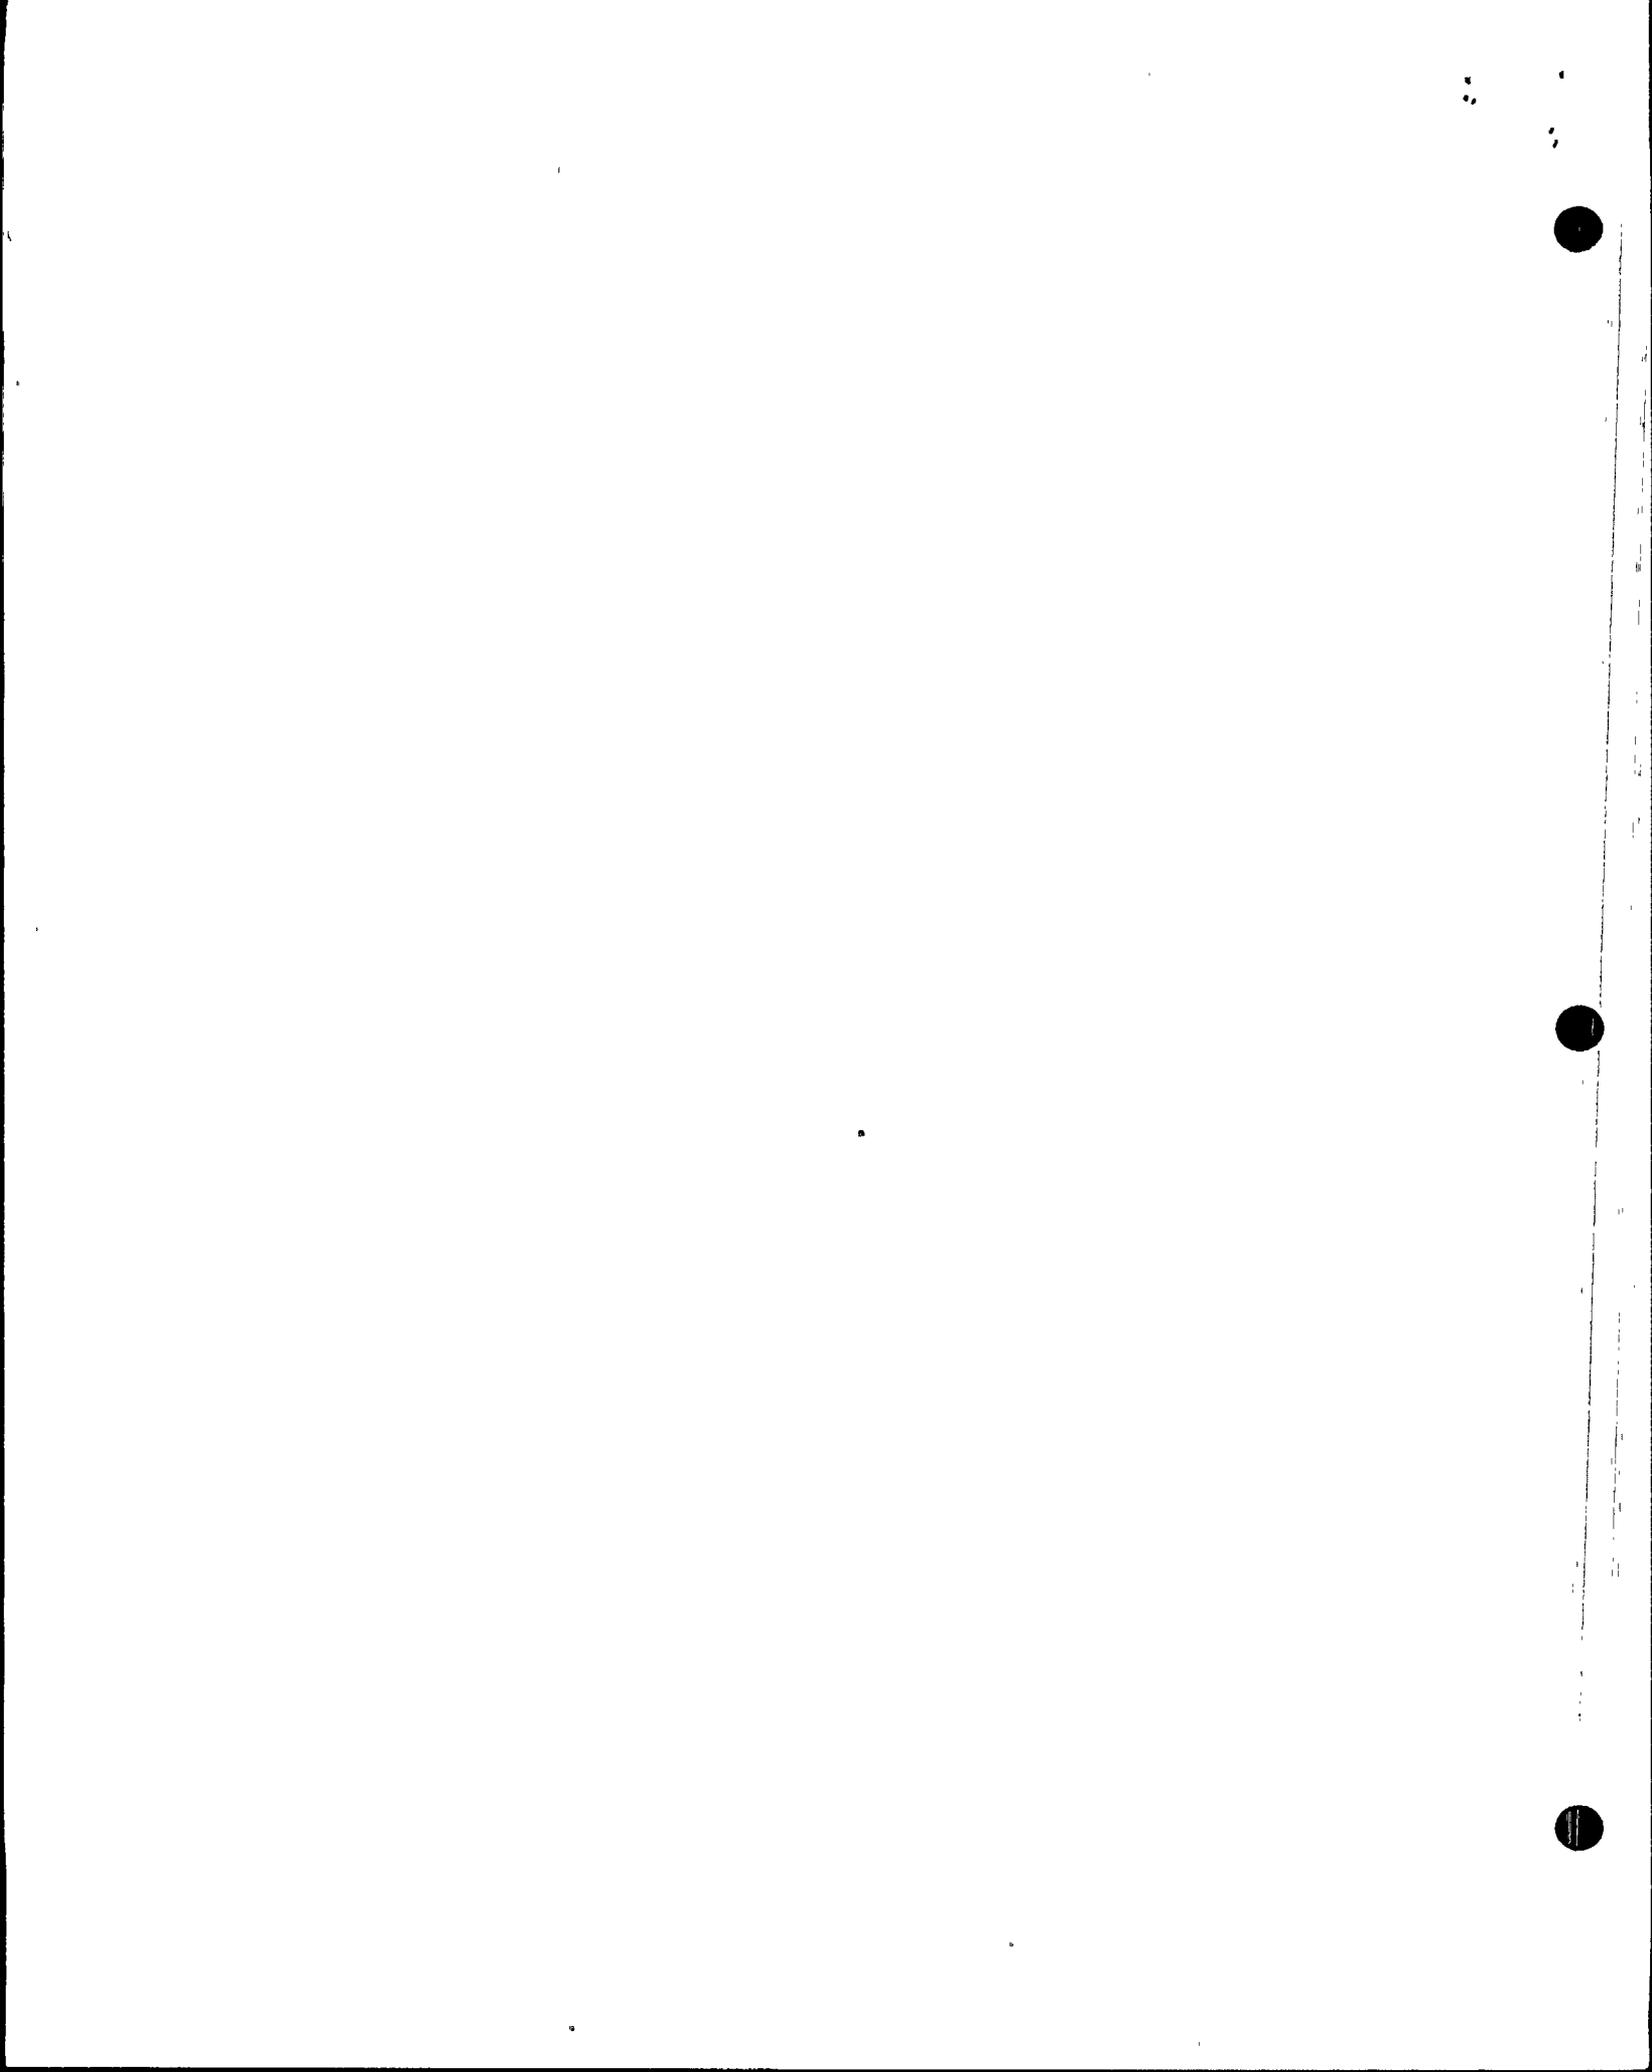

The Inservice Testing Program lists all ASME Class 1, 2 and 3 valves that have been assigned valve categories. Except for valves directly in the flow path (B passive), valves exempted per IWV-1200 are not listed. This listing is located in Section 3.2.

The tables are organized by system in order of the assigned P&ID's number and are listed in Section 2.3.

2.2 Program Information

The following information is included in the Inservice Testing Program for valves:

- A. Valve Number lists the valve identification number as shown on the P&ID's.
- B. Coordinates reference where on the P&ID the valve appears.
- C. ISI Class is the Owner's classification of the valve per ISI requirements. This is usually the same as the ASME Class.
- D. Valve Category indicates the category assigned to the valve based on the definitions of IWV-2200.
- E. Valve Size lists the nominal size of the valve in inches.
- F. Valve Type lists the valve design.
- G. Actuator Type lists the type of valve actuator.
- H. Valve Position indicates the normal position of the valve during plant operation; either normally open (O), normally closed (C) or Both (O/C).

required testing is completed or plant startup, whichever occurs first. Completion of all required valve testing is not a requisite to plant startup. Valve testing which is not completed during a cold shutdown will be performed during subsequent cold shutdowns to meet the Code specified testing requirements. No valve is required to be tested more often than once every 90 days.

Note: Completion of all valve testing during cold shutdown is not required if plant operating conditions will not permit the testing or specific valves.

Normal Operation (OP)

Valve tests with this designation will be performed once every three months.

Reactor Refueling (RF)

Valve tests with this designation will be conducted at reactor refueling outages only.

- L. Max Stroke Time lists the maximum allowed full stroke time measured in seconds from signal initiation until stroke completion is indicated. Testing is to be completed for all stroke times listed whenever the valve is full stroke tested (ref. IWV-3413).
- M. Relief Request references the relief request contained in Appendix B that applies to the particular valve.
- N. Remarks lists clarification remarks.

2.3 Piping & Instrumentation Drawings

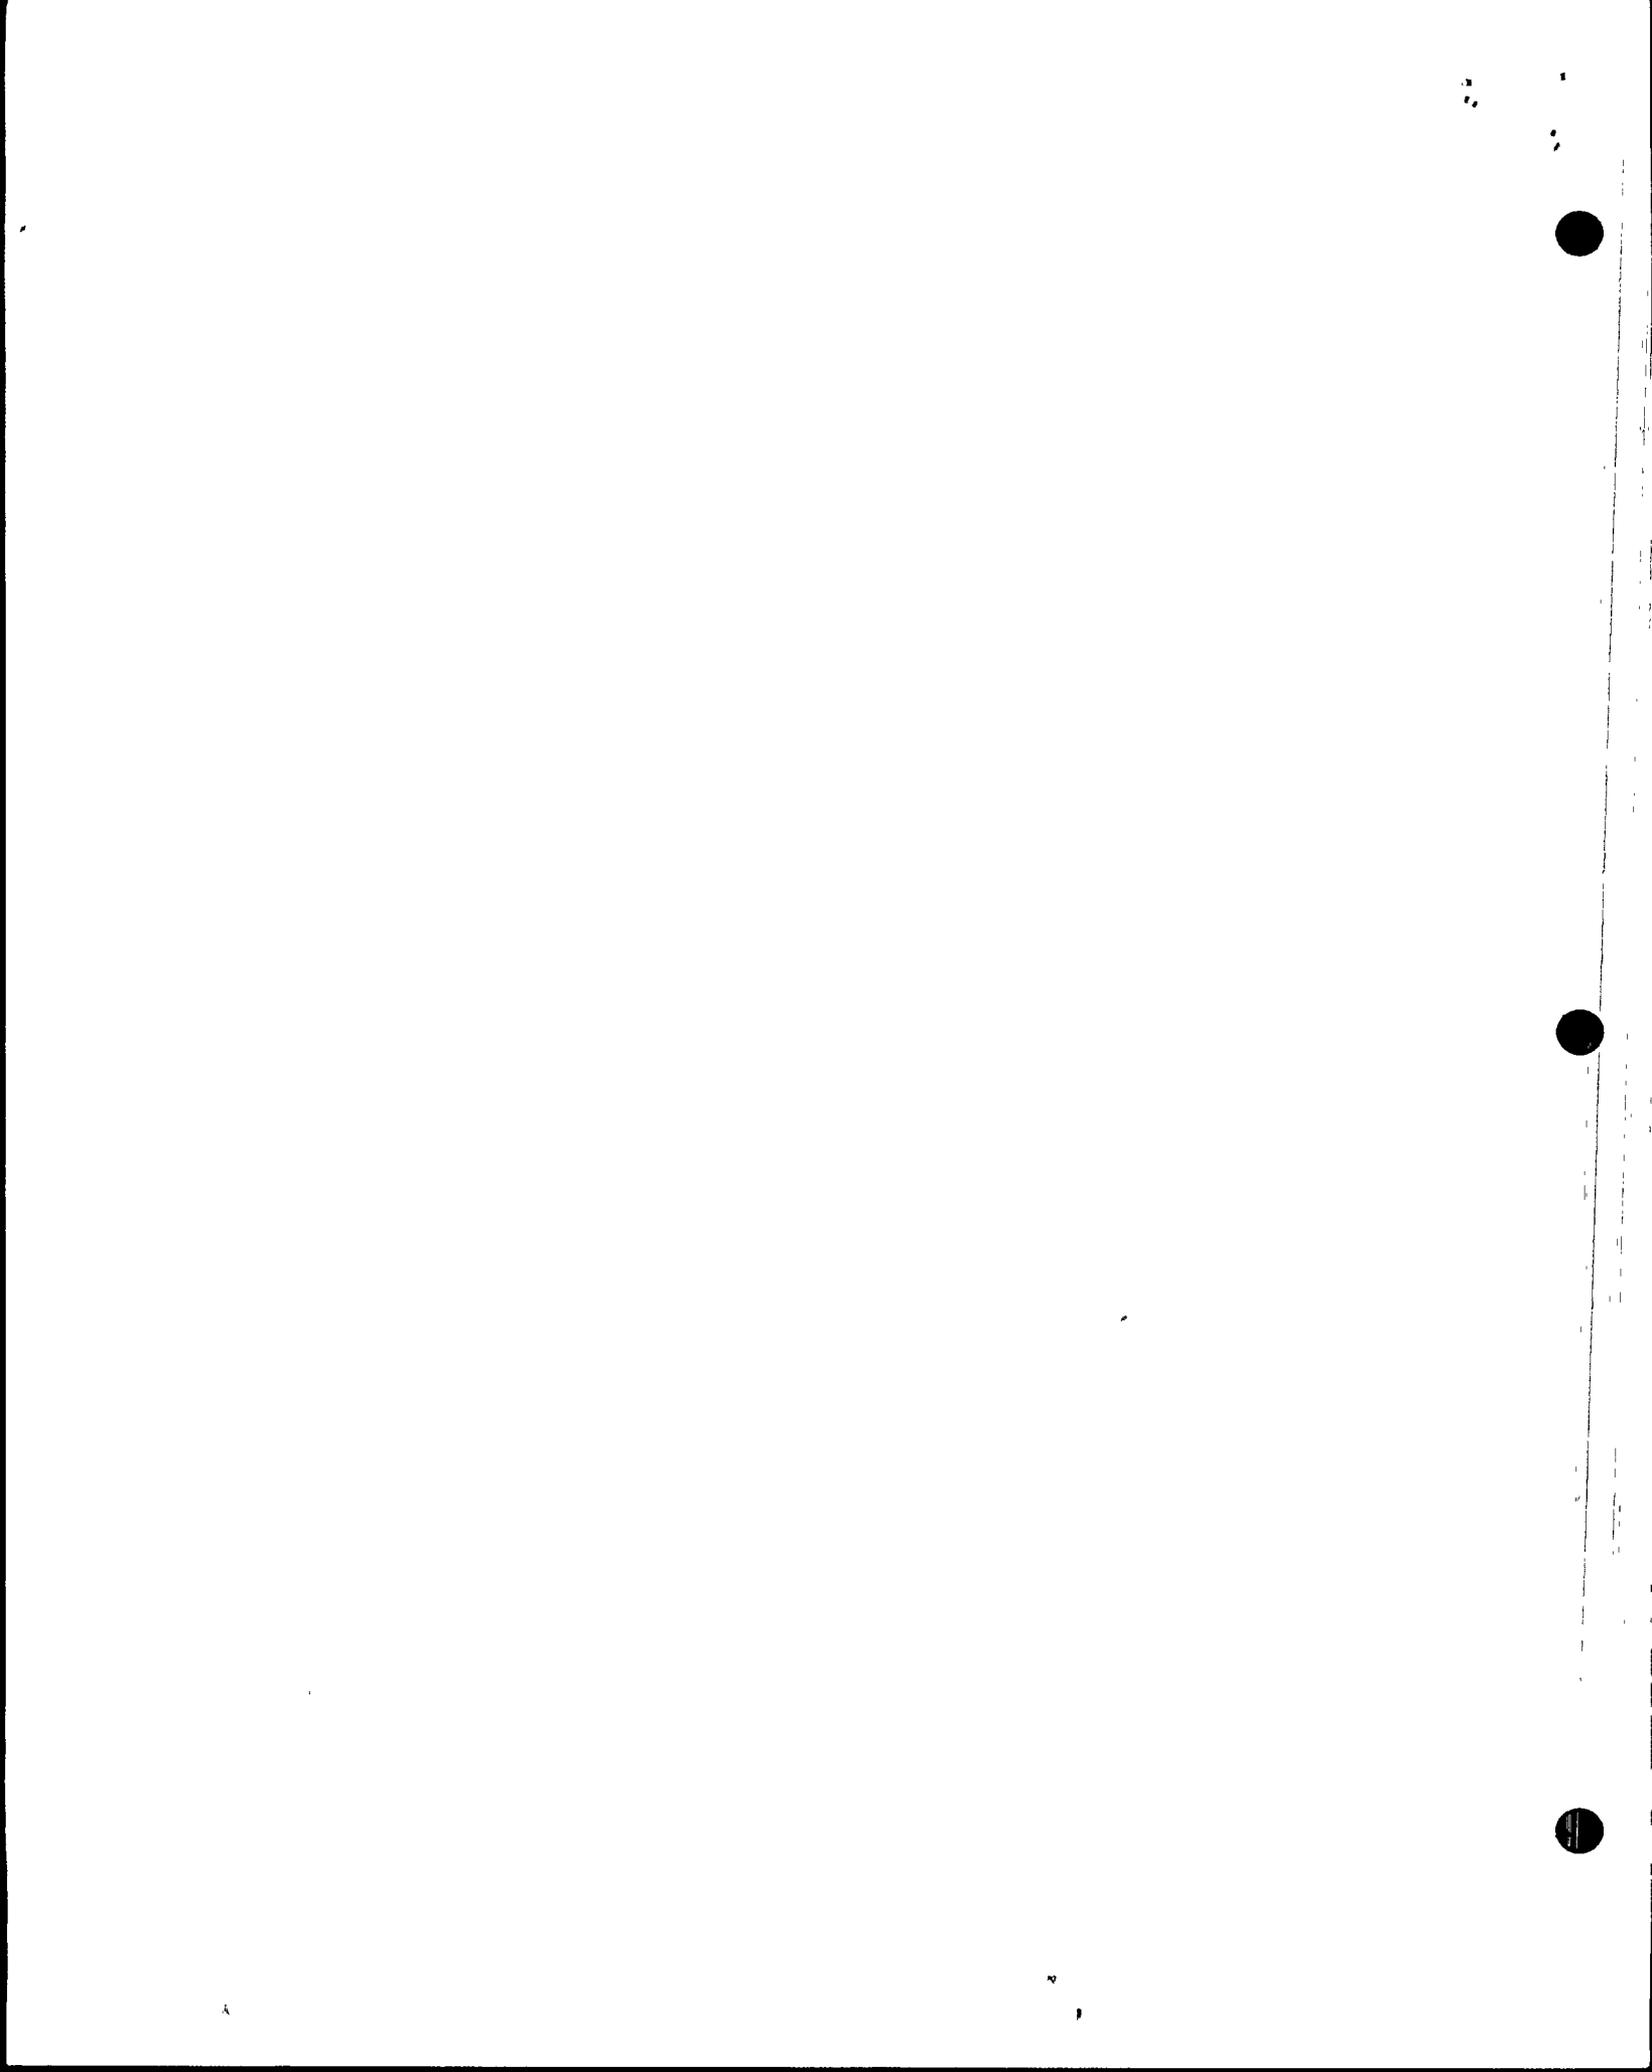

The P&ID's listed on the following page contain valves which are part of the Inservice Testing Program.

2.4 Request for Relief

Where ASME Section XI requirements were determined to be impractical, a request for relief was written.

2.5 Explanation of Abbreviations and Notes

See the following pages.

EXPLANATION OF NOTES

NOTES:

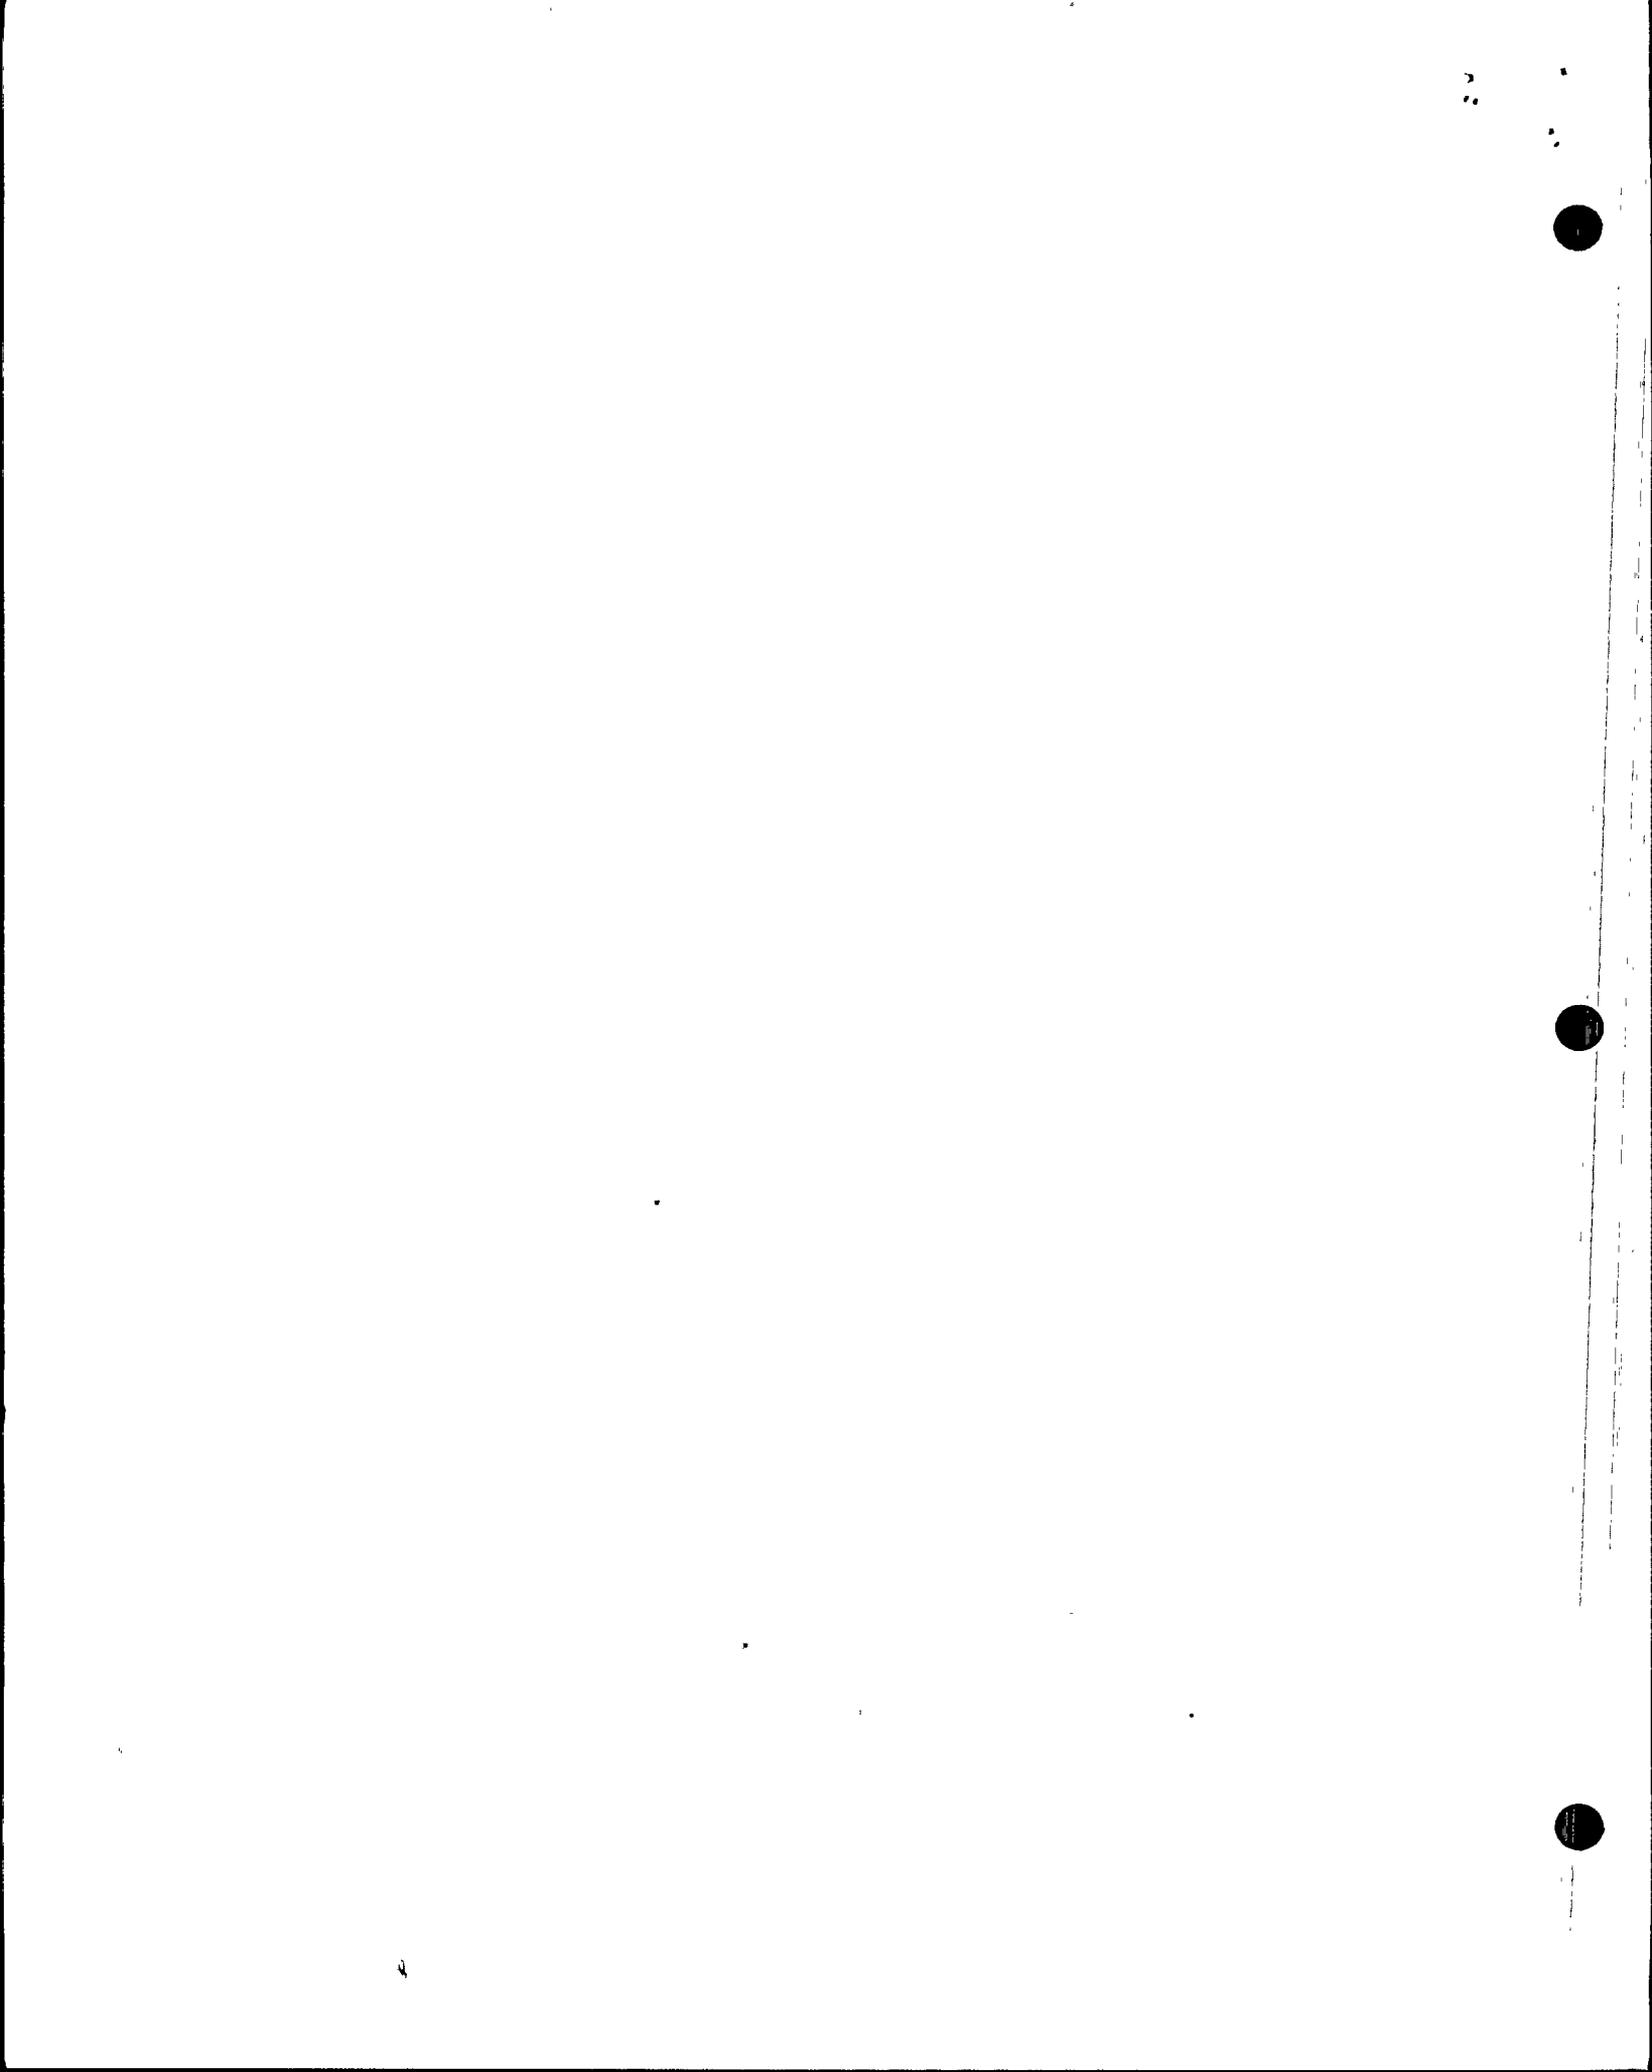

1. This valve is within a non-safety related system, however, it is used for containment isolation and therefore will be tested in accordance with 10CFR50 Appendix J requirements.
2. This valve is a pressure relief valve and will be tested at the frequency stated in IWV-3511.
3. This valve is a passive valve and does not require testing.
4. This valve cannot be full stroke exercised.
5. This valve cannot be partially stroke exercised during plant operation.
6. All motor operated valves fail-as-is and therefore do not require a fail safe test per IWV-3415.
7. Position of valve is determined to be non-safety related and therefore requires no testing.
9. This valve is A passive and will only be tested in accordance with 10CFR50 Appendix J rules.
10. This valve will be tested in accordance with 10CFR50 Appendix J requirements.
11. This valve operates during normal operation and therefore requires no special testing (IWV-3414).
12. Operability of this valve shall be noted as required when the system is tested for operability. No special testing is required.

APPENDIX A

REQUEST FOR RELIEF

FOR PUMPS

PUMP RELIEF REQUEST NO. 1

SYSTEM: Safety Related

COMPONENT: All pumps listed in the program

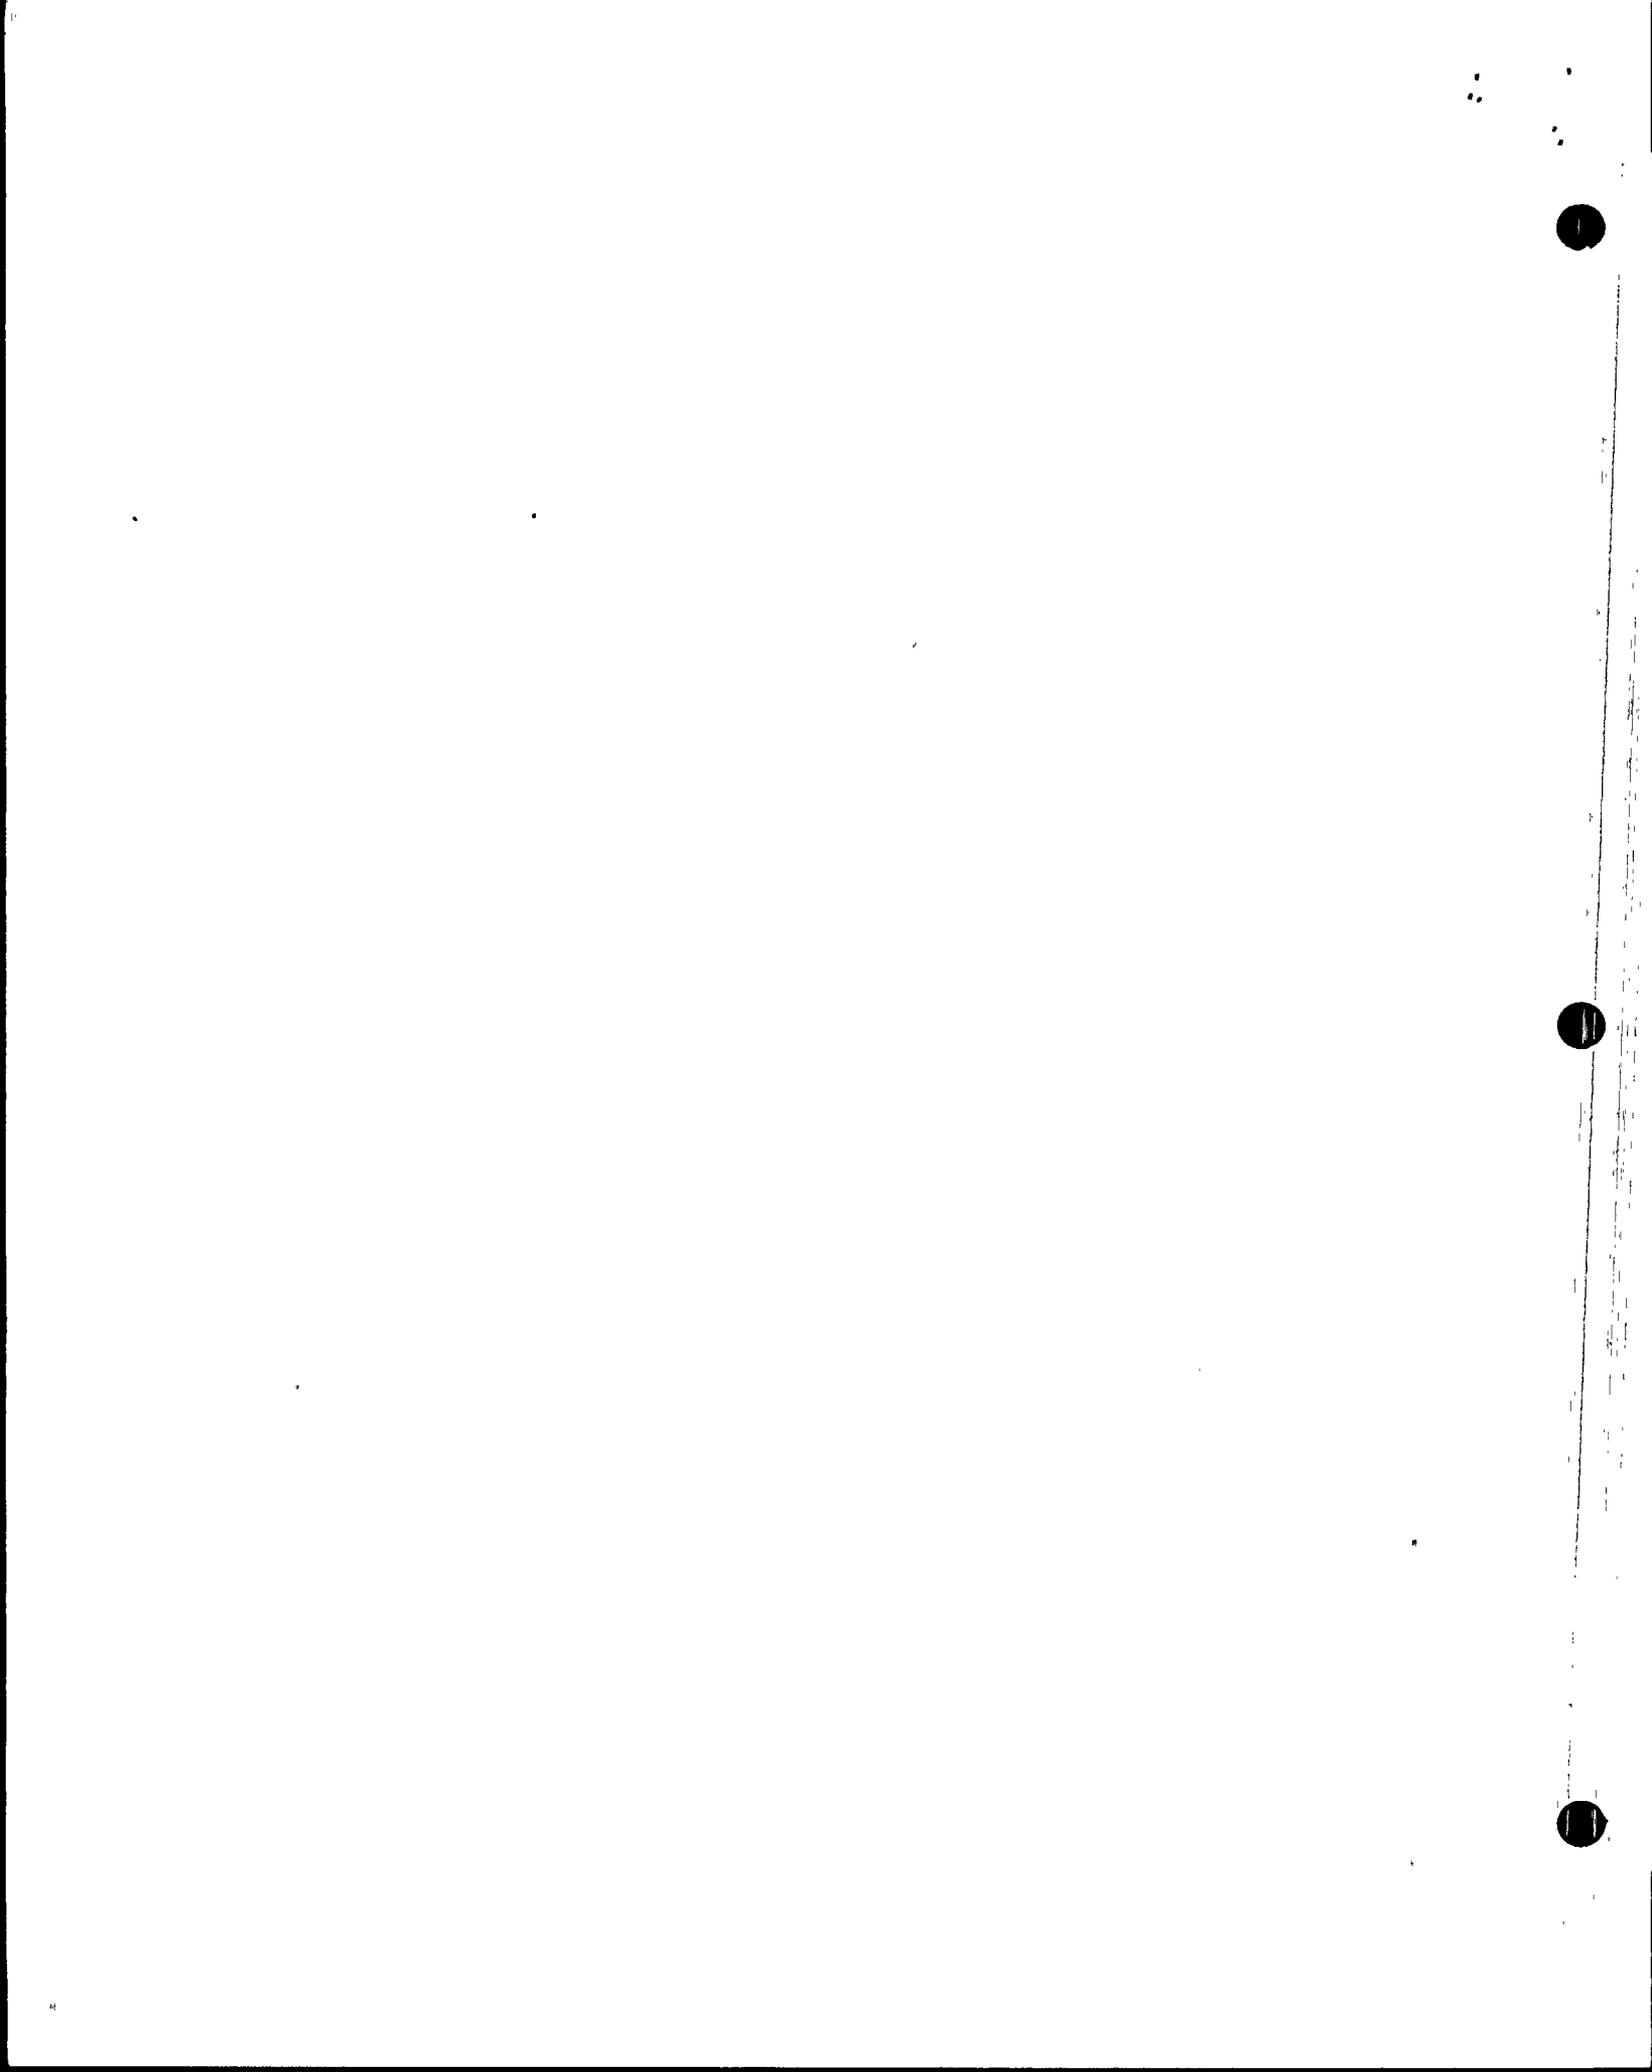

CLASS: 2 & 3

FUNCTION: To provide to safety related systems

TEST REQUIREMENT: To measure bearing temperature.

BASIS FOR RELIEF: Industry data has shown that bearing temperature changes due to degrading bearings only occurs after major degradation has occurred at the pump. Prior to this, the vibration measurement would provide the necessary information to warn the operator of an impending malfunction. Therefore, this parameter will not be measured since its information is after the fact.

ALTERANTE TESTING: None

PUMP RELIEF REQUEST NO. 2

SYSTEM: Diesel Generator Fuel Oil Transfer System

COMPONENTS: DFA-P01 & DFB-P01

P&ID & COORDINATES: DFP-001 @ B-6 and B-2

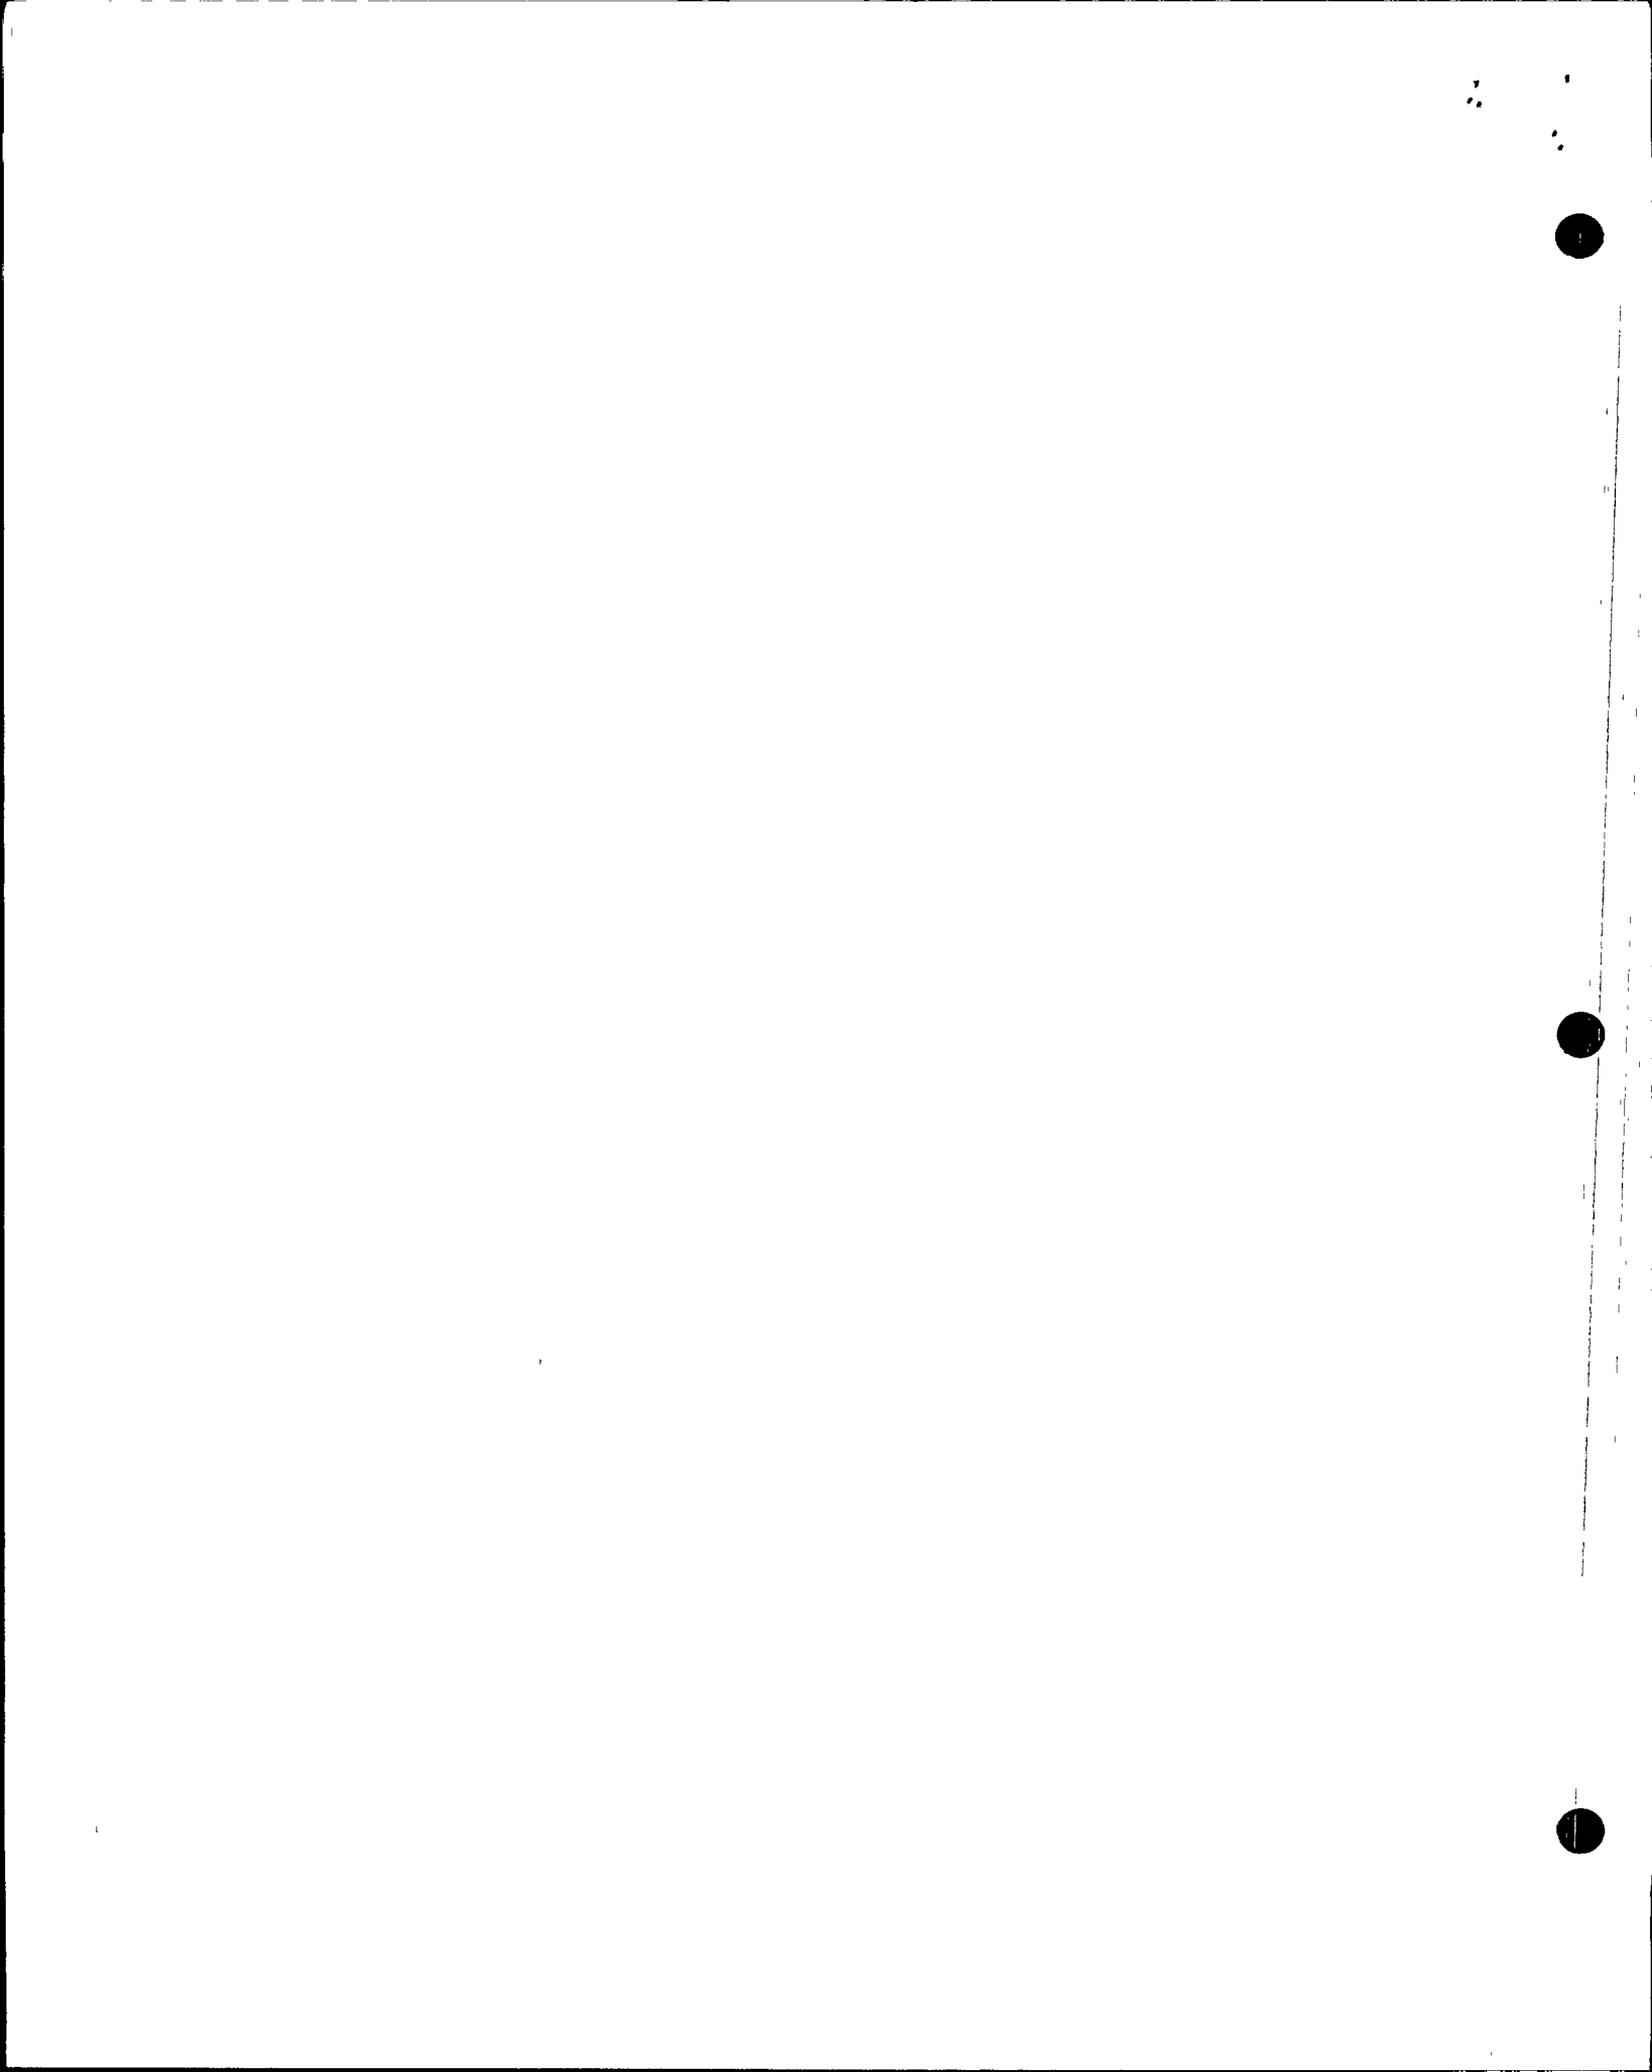

CLASS: 3

FUNCTION: To provide fuel oil to the standby diesel generators.

TEST REQUIREMENTS: Measure displacement vibration amplitude of pump.

BASIS FOR RELIEF: These pumps are immersable centrifugal sump pumps located in the emergency fuel oil storage tanks, therefore, are inaccessible for this type of testing.

ALTERNATE TESTING: No alternate testing for this parameter is practical, however, all other parameters will be tested per Section XI requirements to show pump integrity.

PUMP RELIEF REQUEST NO. 3

SYSTEM: Essential Spray Pond System

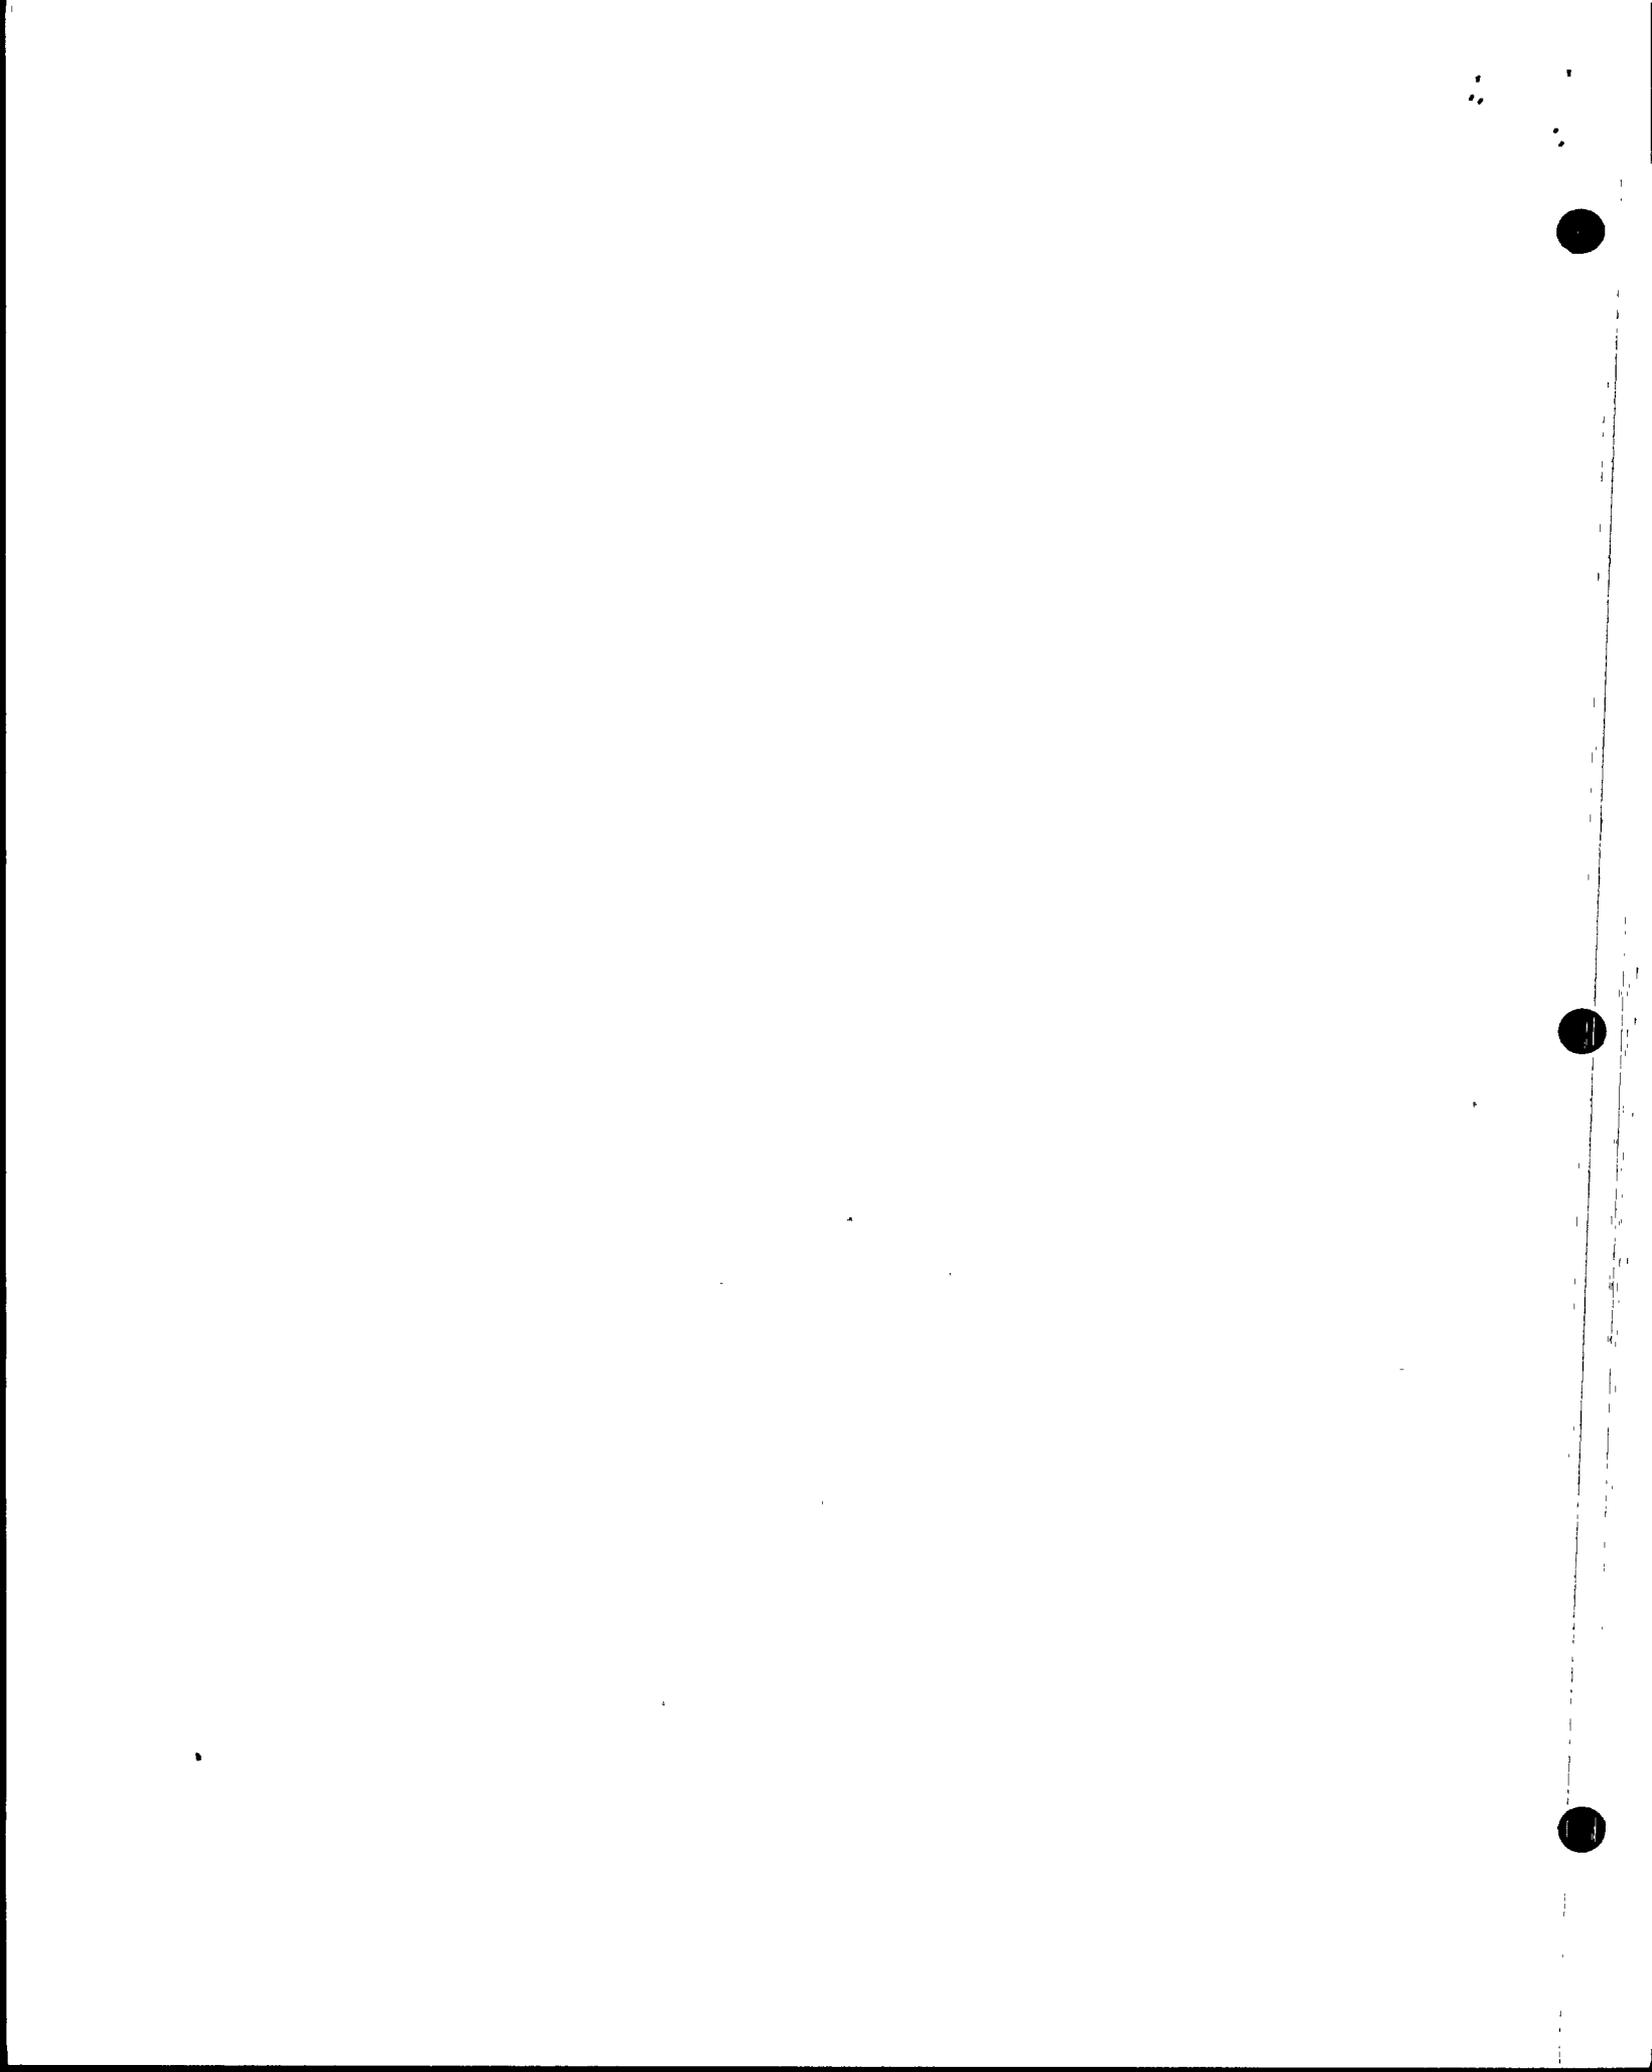

COMPONENTS: SPA-P01 & SPB-P01

P&ID & COORDINATES: SPP-001 @ D-4 & D-7

TEST REQUIREMENT: Measure displacement vibration amplitude of pump.

BASIS FOR RELIEF: These pumps are immersable centrifugal sump pumps located in the Essential Spray Pond Sump, therefore, are inaccessible for this type of testing.

ALTERNATE TESTING: No alternate testing for this parameter is practical, however, all other parameters will be tested per Section XI requirements to show pump integrity.

APPENDIX B

REQUEST FOR RELIEF

FOR VALVES

VALVE RELIEF REQUEST NO. 1

SYSTEM: Chemical and Volume Control.

COMPONENTS: CHV305 and CHV306.

P&ID & COORDINATES: CHP-002 @ B-15 & C-13.

CATEGORY: C

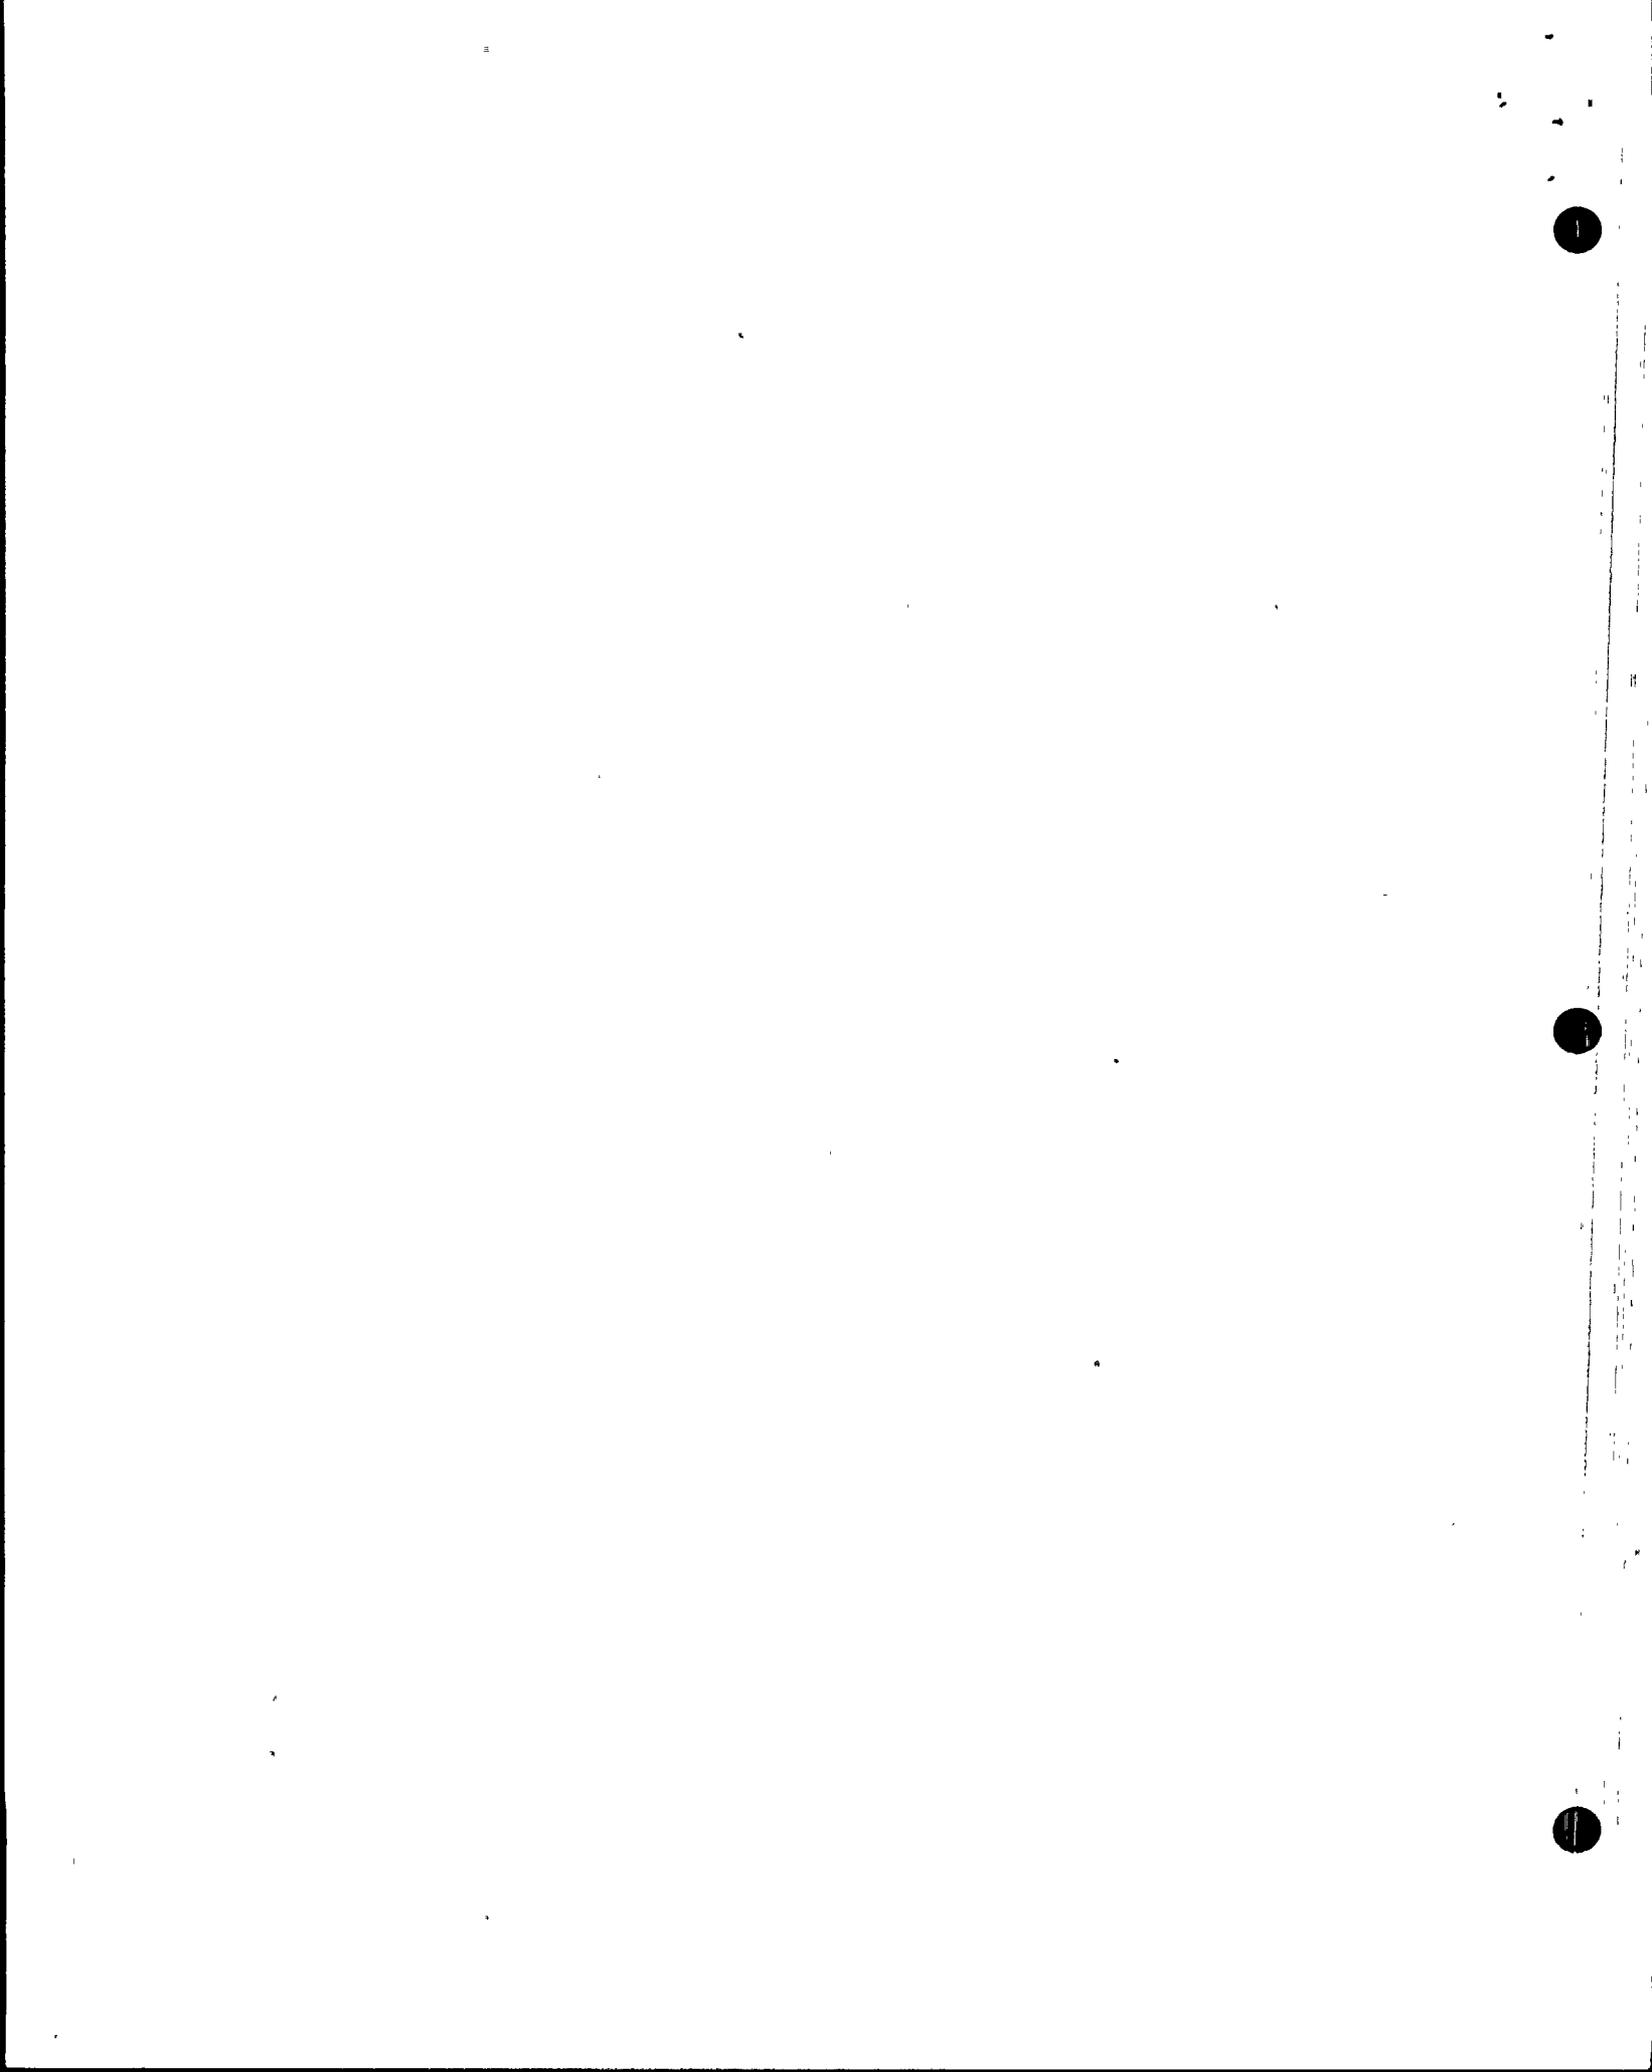

CLASS: 2

FUNCTION: Valves open with differential pressure to provide flow to the LPSI, HPSI, and CS pumps from Refueling Water Tank.

TEST REQUIREMENT: Full stroke exercise test once every three months.

BASIS FOR RELIEF: Flow will not be sufficient to completely stroke these valves during operation.

ALTERNATE TESTING: These valves will be given a partial stroke test at least once every 90 days while testing the pumps. A full stroke test will be accomplished during the refueling mode when full flow can be established. At this time the test flow path will be from the Refueling Water Tank to the primary loop. Due to the primary loop back pressure this test can only be accomplished during the refueling mode when the reactor head is removed.

VALVE RELIEF REQUEST NO. 2

SYSTEM: Essential Cooling Water.

COMPONENTS: EW-UV65 and EW-UV145.

P&ID & COORDINATES: EWP-001 @ C-8 and C-4.

CATEGORY: B

CLASS: 3

FUNCTION: Valves open to provide Normal Chilled Water System with Essential Chilled Water in the event that the Normal Chilled Water System is inoperable.

TEST REQUIREMENTS: Full stroke exercise test every three months.

BASIS FOR RELIEF: Opening these valves during operations or Cold Shutdown will produce a low pressure in the Normal Chilled Water System. This could lead to the system becoming inoperable.

ALTERNATE TESTING: Perform a full stroke exercise test during the refueling mode.

VALVE RELIEF REQUEST NO. 3

SYSTEM: Safety Injection and Shutdown Cooling.

COMPONENTS: SIV205 and SIV206.

P&ID & COORDINATES: SIP-001 @ G-14 and A-14.

CATEGORY: C

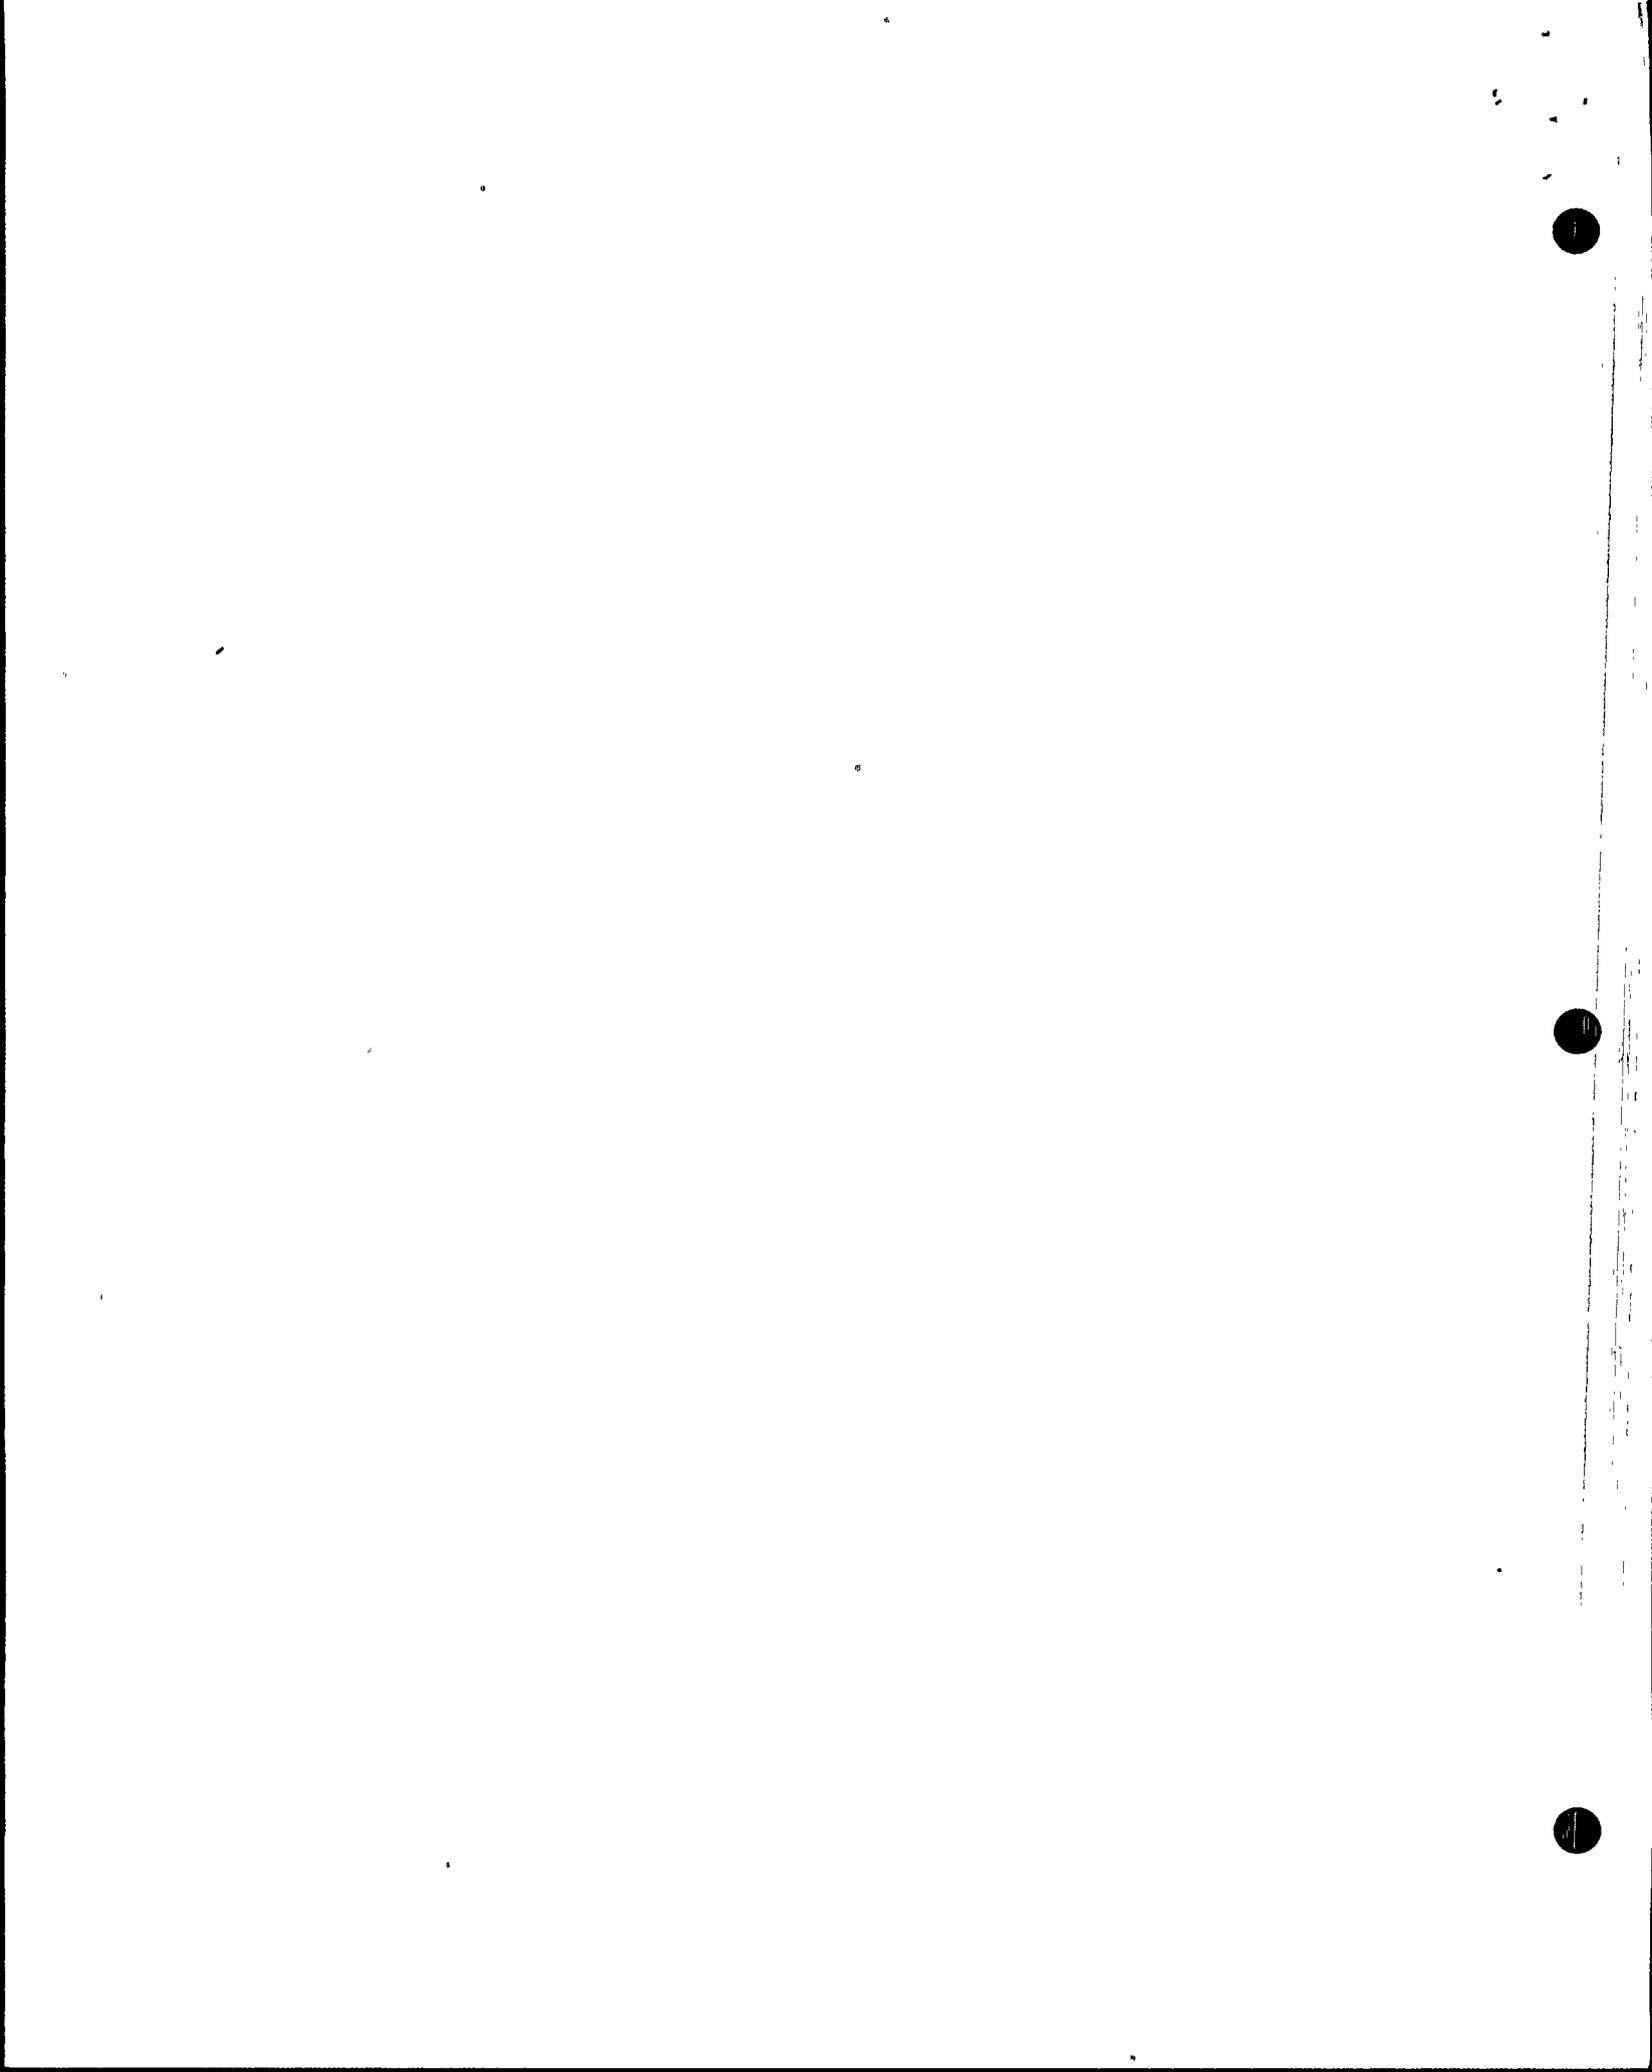

CLASS: 2

FUNCTION: These valves open to provide flow to the HPSI and CS pumps from the recirculation sump.

TEST REQUIREMENTS: Full stroke exercise test every three months.

BASIS FOR RELIEF: This recirculation sump is normally dry so full flow can not be established in this line.

ALTERNATE TESTING: Perform a partial stroke exercise test during refueling using test connections.

VALVE RELIEF REQUEST NO. 4

SYSTEM: Safety Injection and Shutdown Cooling.

COMPONENTS: SIV114, SIV124, SIV134 and SIV144.

P&ID & COORDINATES: SIP-002 @ F14, F-11, F-6 and F-4.

CATEGORY: C

CLASS: 2

FUNCTION: Valves open to provide flow paths from the low pressure safety injection headers to the primary loops.

TEST REQUIREMENTS: Full stroke exercise test every three months.

BASIS FOR RELIEF: Flow cannot be established to exercise valves during operation or cold shutdown due to the pressure in the Primary Coolant System.

ALTERNATE TESTING: These valves will be full stroke exercised during re-fueling when the reactor head is removed.

VALVE RELIEF REQUEST NO. 5

SYSTEM: Safety Injection and Shutdown Cooling

COMPONENTS: SIV164 and SIV165

P&ID & COORDINATES: SIP-002 @ F-9 and F-6.

CATEGORY: C

CLASS: 2

FUNCTION: Valves open to provide flow from the Containment Spray Pump to the discharge nozzles.

TEST REQUIREMENTS: Full stroke exercise test every three months

BASIS FOR RELIEF: Flow can not be established without discharging water into containment.

ALTERNATE TESTING: Test these valves per Technical Specification during refueling.

VALVE RELIEF REQUEST NO. 6

SYSTEM: Safety Injection and Shutdown Cooling.

COMPONENTS: SIV215, SIV225, SIV235 and SIV245.

P&ID & COORDINATES: SIP-002 @ B-15, B-12, B-8 and B-5.

CATEGORY: C

CLASS: 2

FUNCTION: Valves open to provide a flowpath from the Safety Injection to the Primary Coolant Loop.

TEST REQUIREMENTS: Full stroke exercise test every three months.

BASIS FOR RELIEF: Full stroking is only possible when the Safety Injection Tank discharges into the Primary Coolant Loop.

ALTERNATE TESTING: Partial stroke exercise these valves during refueling utilizing the test flowpath.

VALVE RELIEF REQUEST NO. 7

SYSTEM: Safety Injection and Shutdown Cooling.

COMPONENTS: SIV113, SIV123, SIV133, SIV143, SIV404, and SIV 405

P&ID & COORDINATES: SIP-002 @ F-14, F-11, F-7, G-5 and B-5

CATEGORY: A, C

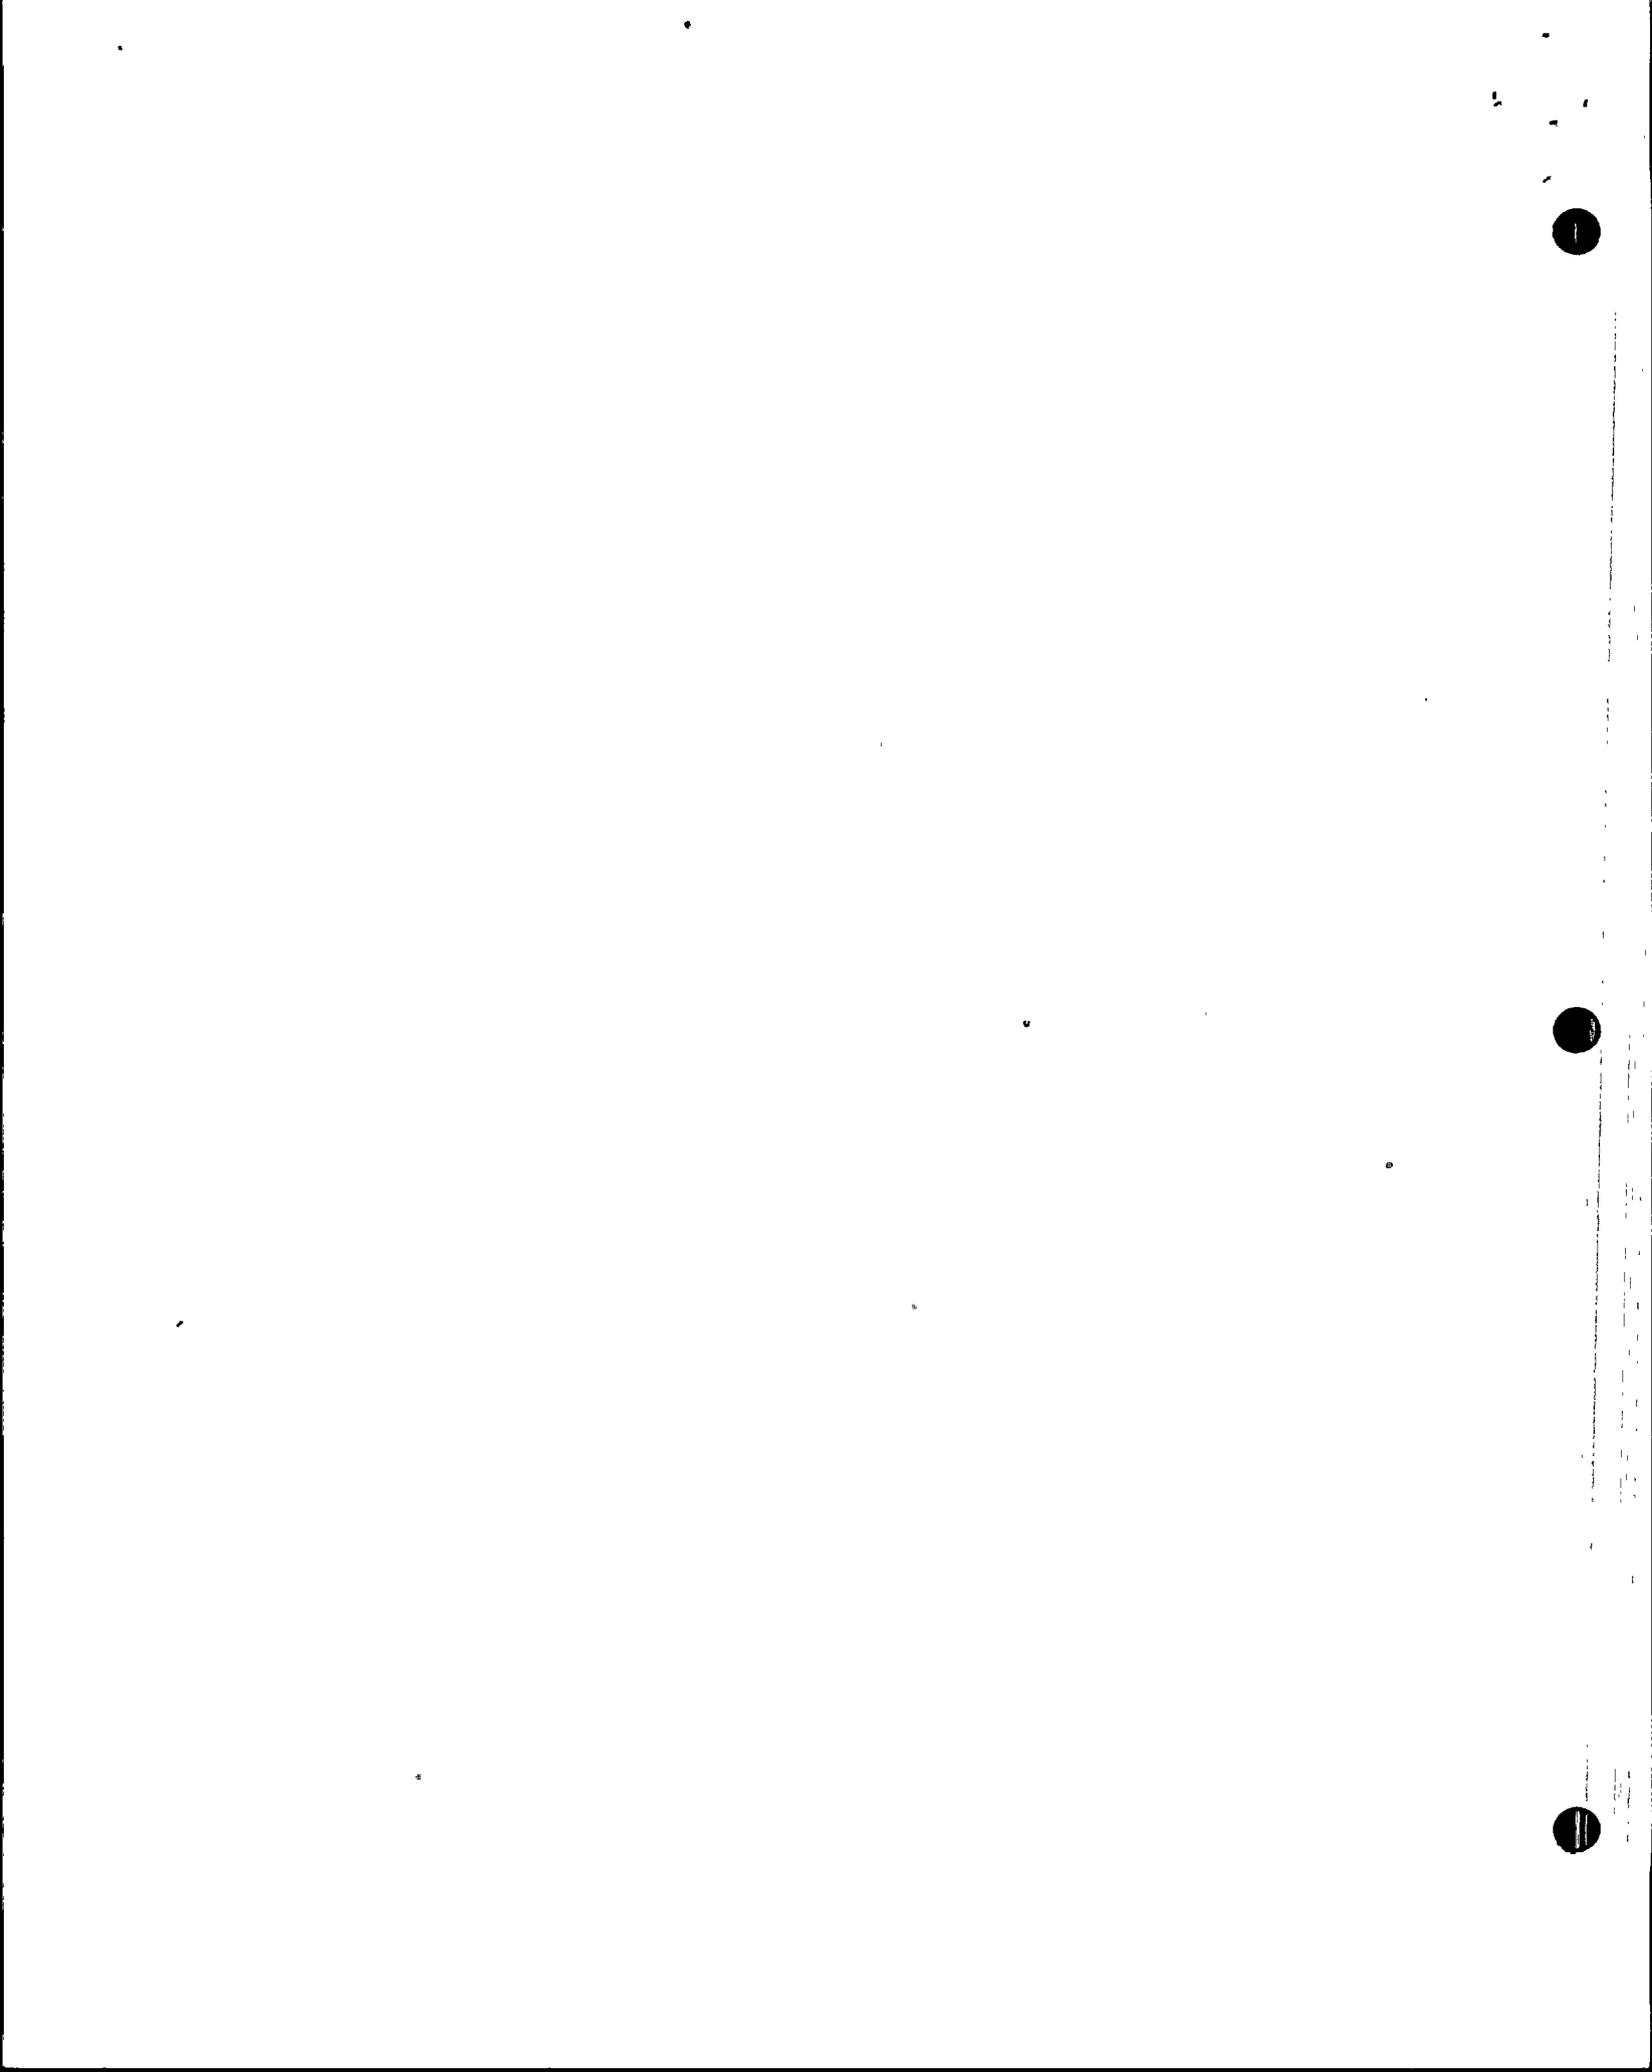

CLASS: 2

FUNCTION: Valves open to provide a flowpath from the Safety Injection System to the Primary Coolant Loop.

TEST REQUIREMENTS: Full stroke exercise test every three months.

BASIS FOR RELIEF: These valves can only be exercised by initiation of flow through the valves and into the Reactor Coolant System. Safety Injection Pumps are not sufficient to establish flow that will exercise these valves due to pressure of the Primary Coolant System.

ALTERNATE TESTING: Full stroke exercise these valves during refueling utilizing the Safety Injection Pumps.

VALVE RELIEF REQUEST NO. 8

SYSTEM: Safety Injection and Shutdown Cooling

COMPONENTS: SIV522 and SIV532

P&ID & COORDINATES: SIP-002 @ C-3 and C-10

CATEGORY: C

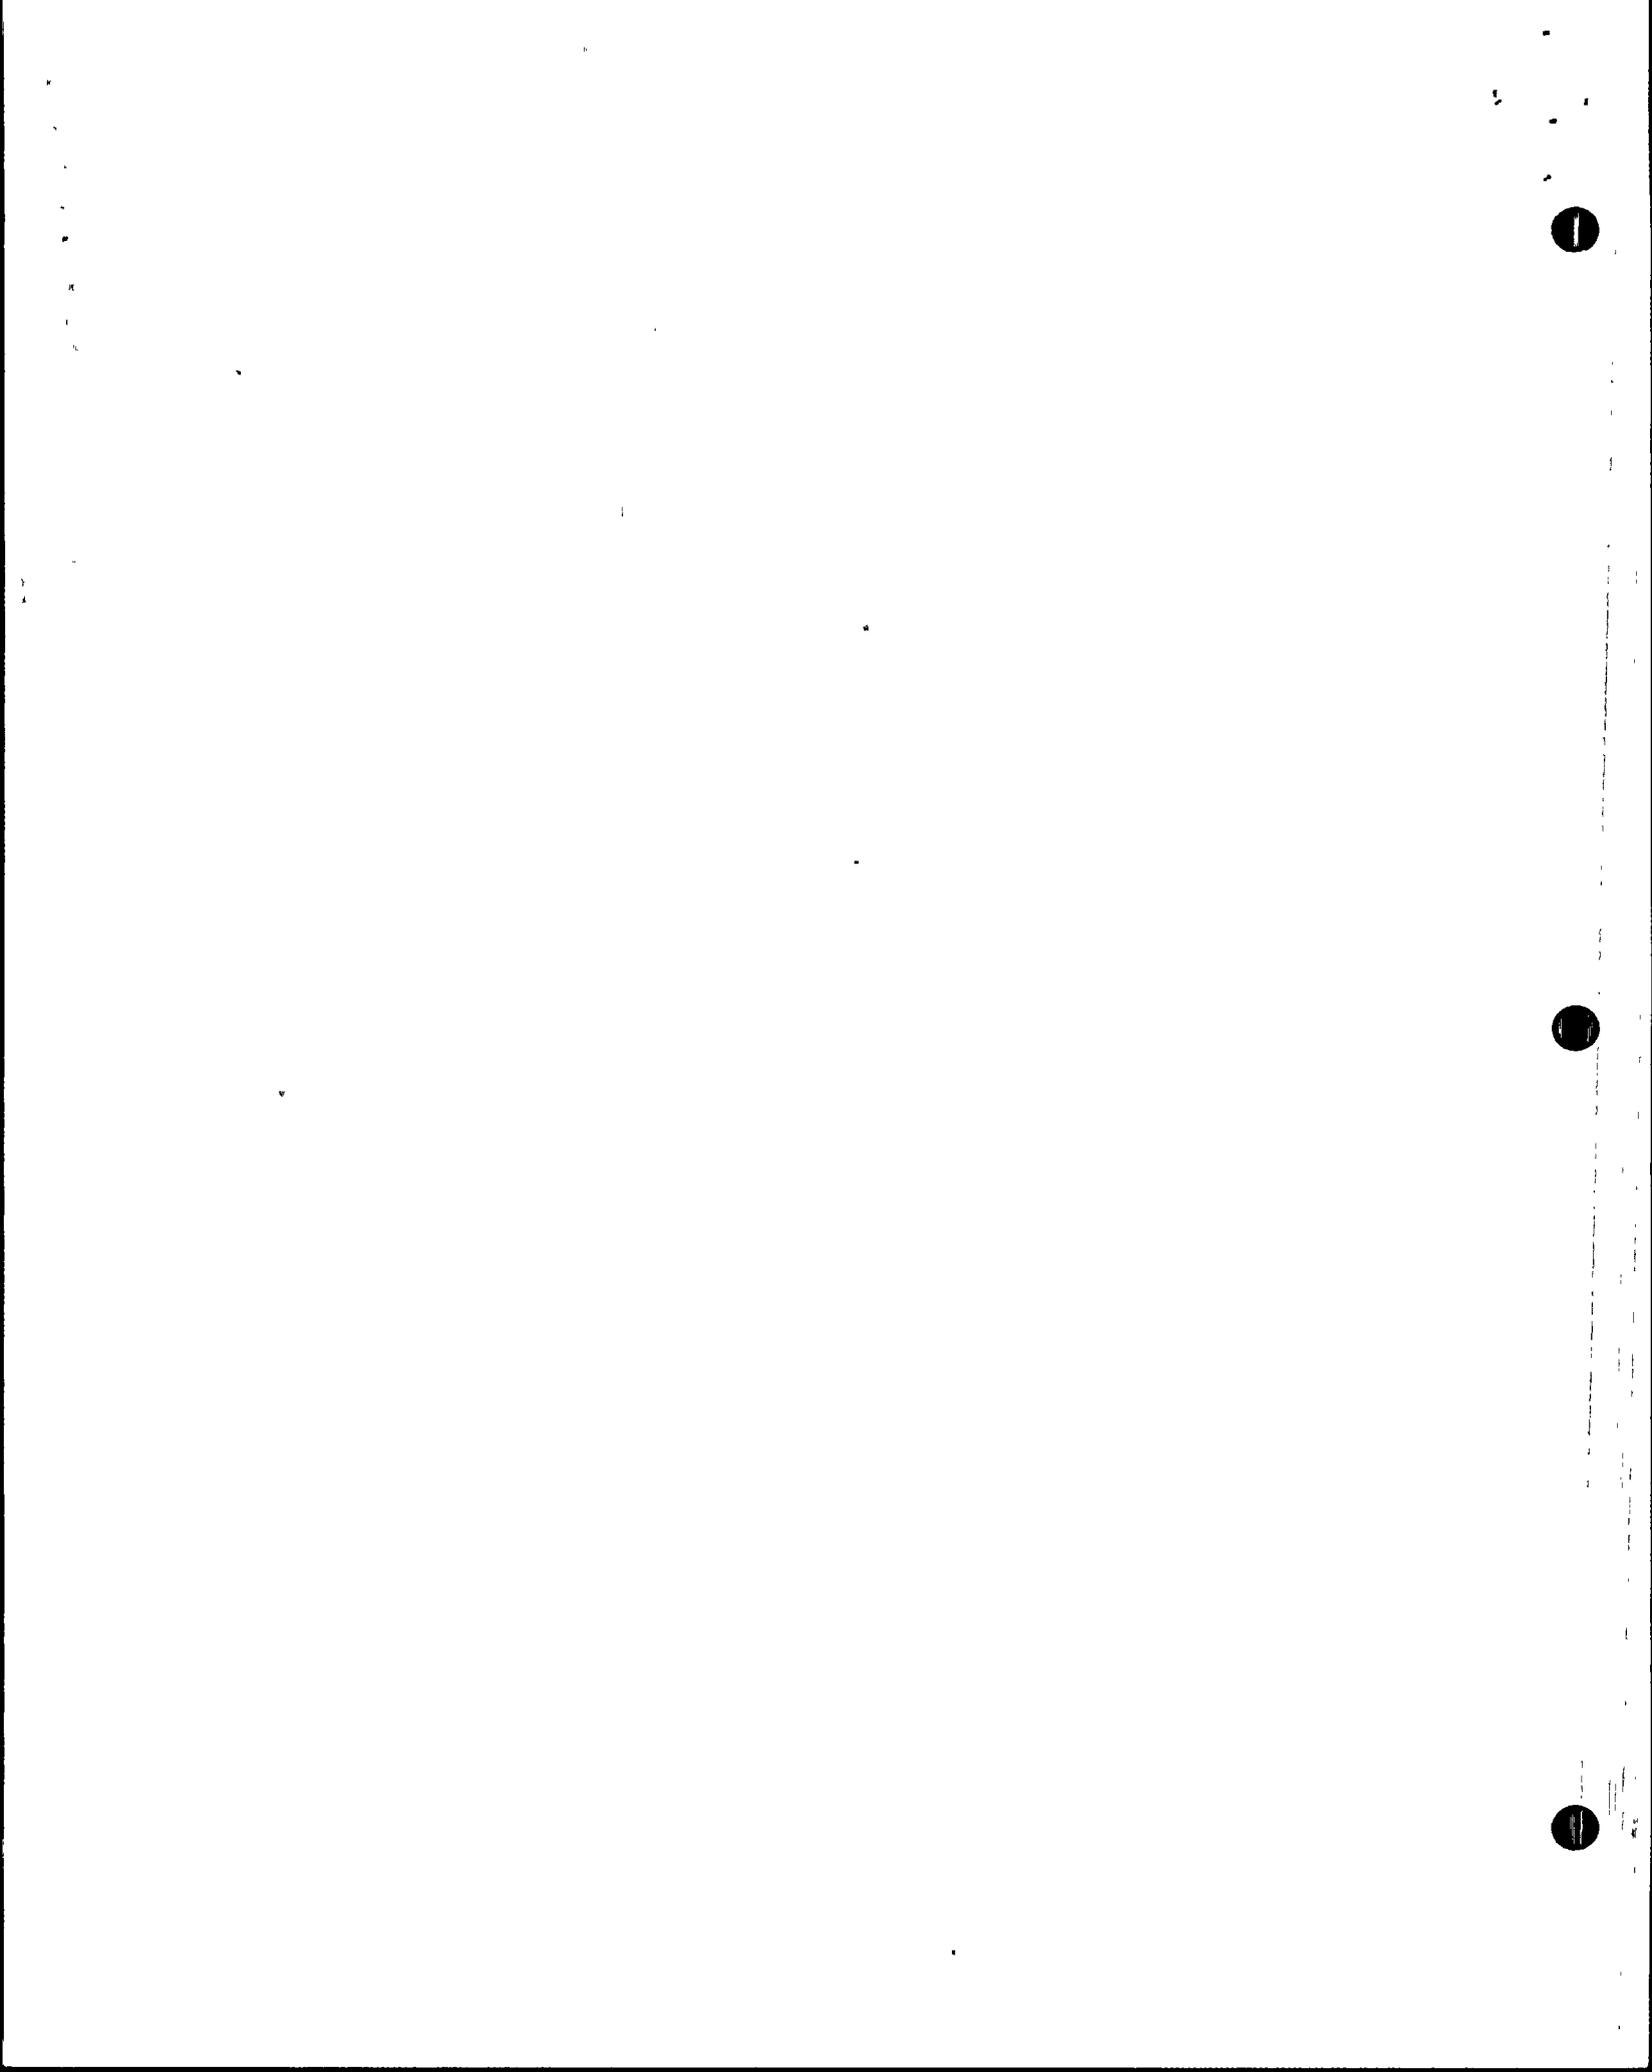

CLASS: 1

FUNCTION: Valves open to provide a flowpath for the HPSI system to the shutdown cooling lines.

TEST REQUIREMENTS: Full stroke exercise test every three months.

BASIS FOR RELIEF: These valves can only be exercised by initiation of flow through the valves and into the Reactor Coolant System. The Safety Injection pumps are not sufficient to exercise these valves due to pressure of the Primary Coolant System.

ALTERNATE TESTING: Full stroke exercise these valves during refueling when the reactor head is removed utilizing the Safety Injection System.

VALVE RELIEF REQUEST NO. 9

SYSTEM: Safety Injection and Shutdown Cooling

COMPONENTS: SIV217, SIV227, SIV237, SIV247, SIV540, SIV541,
SIV542, SIV543

P&ID & COORDINATES: SIP-002 @ B-14, B-11, B-6, B-4, C-14, C-11,
C-6 and C-4

CATEGORY: C

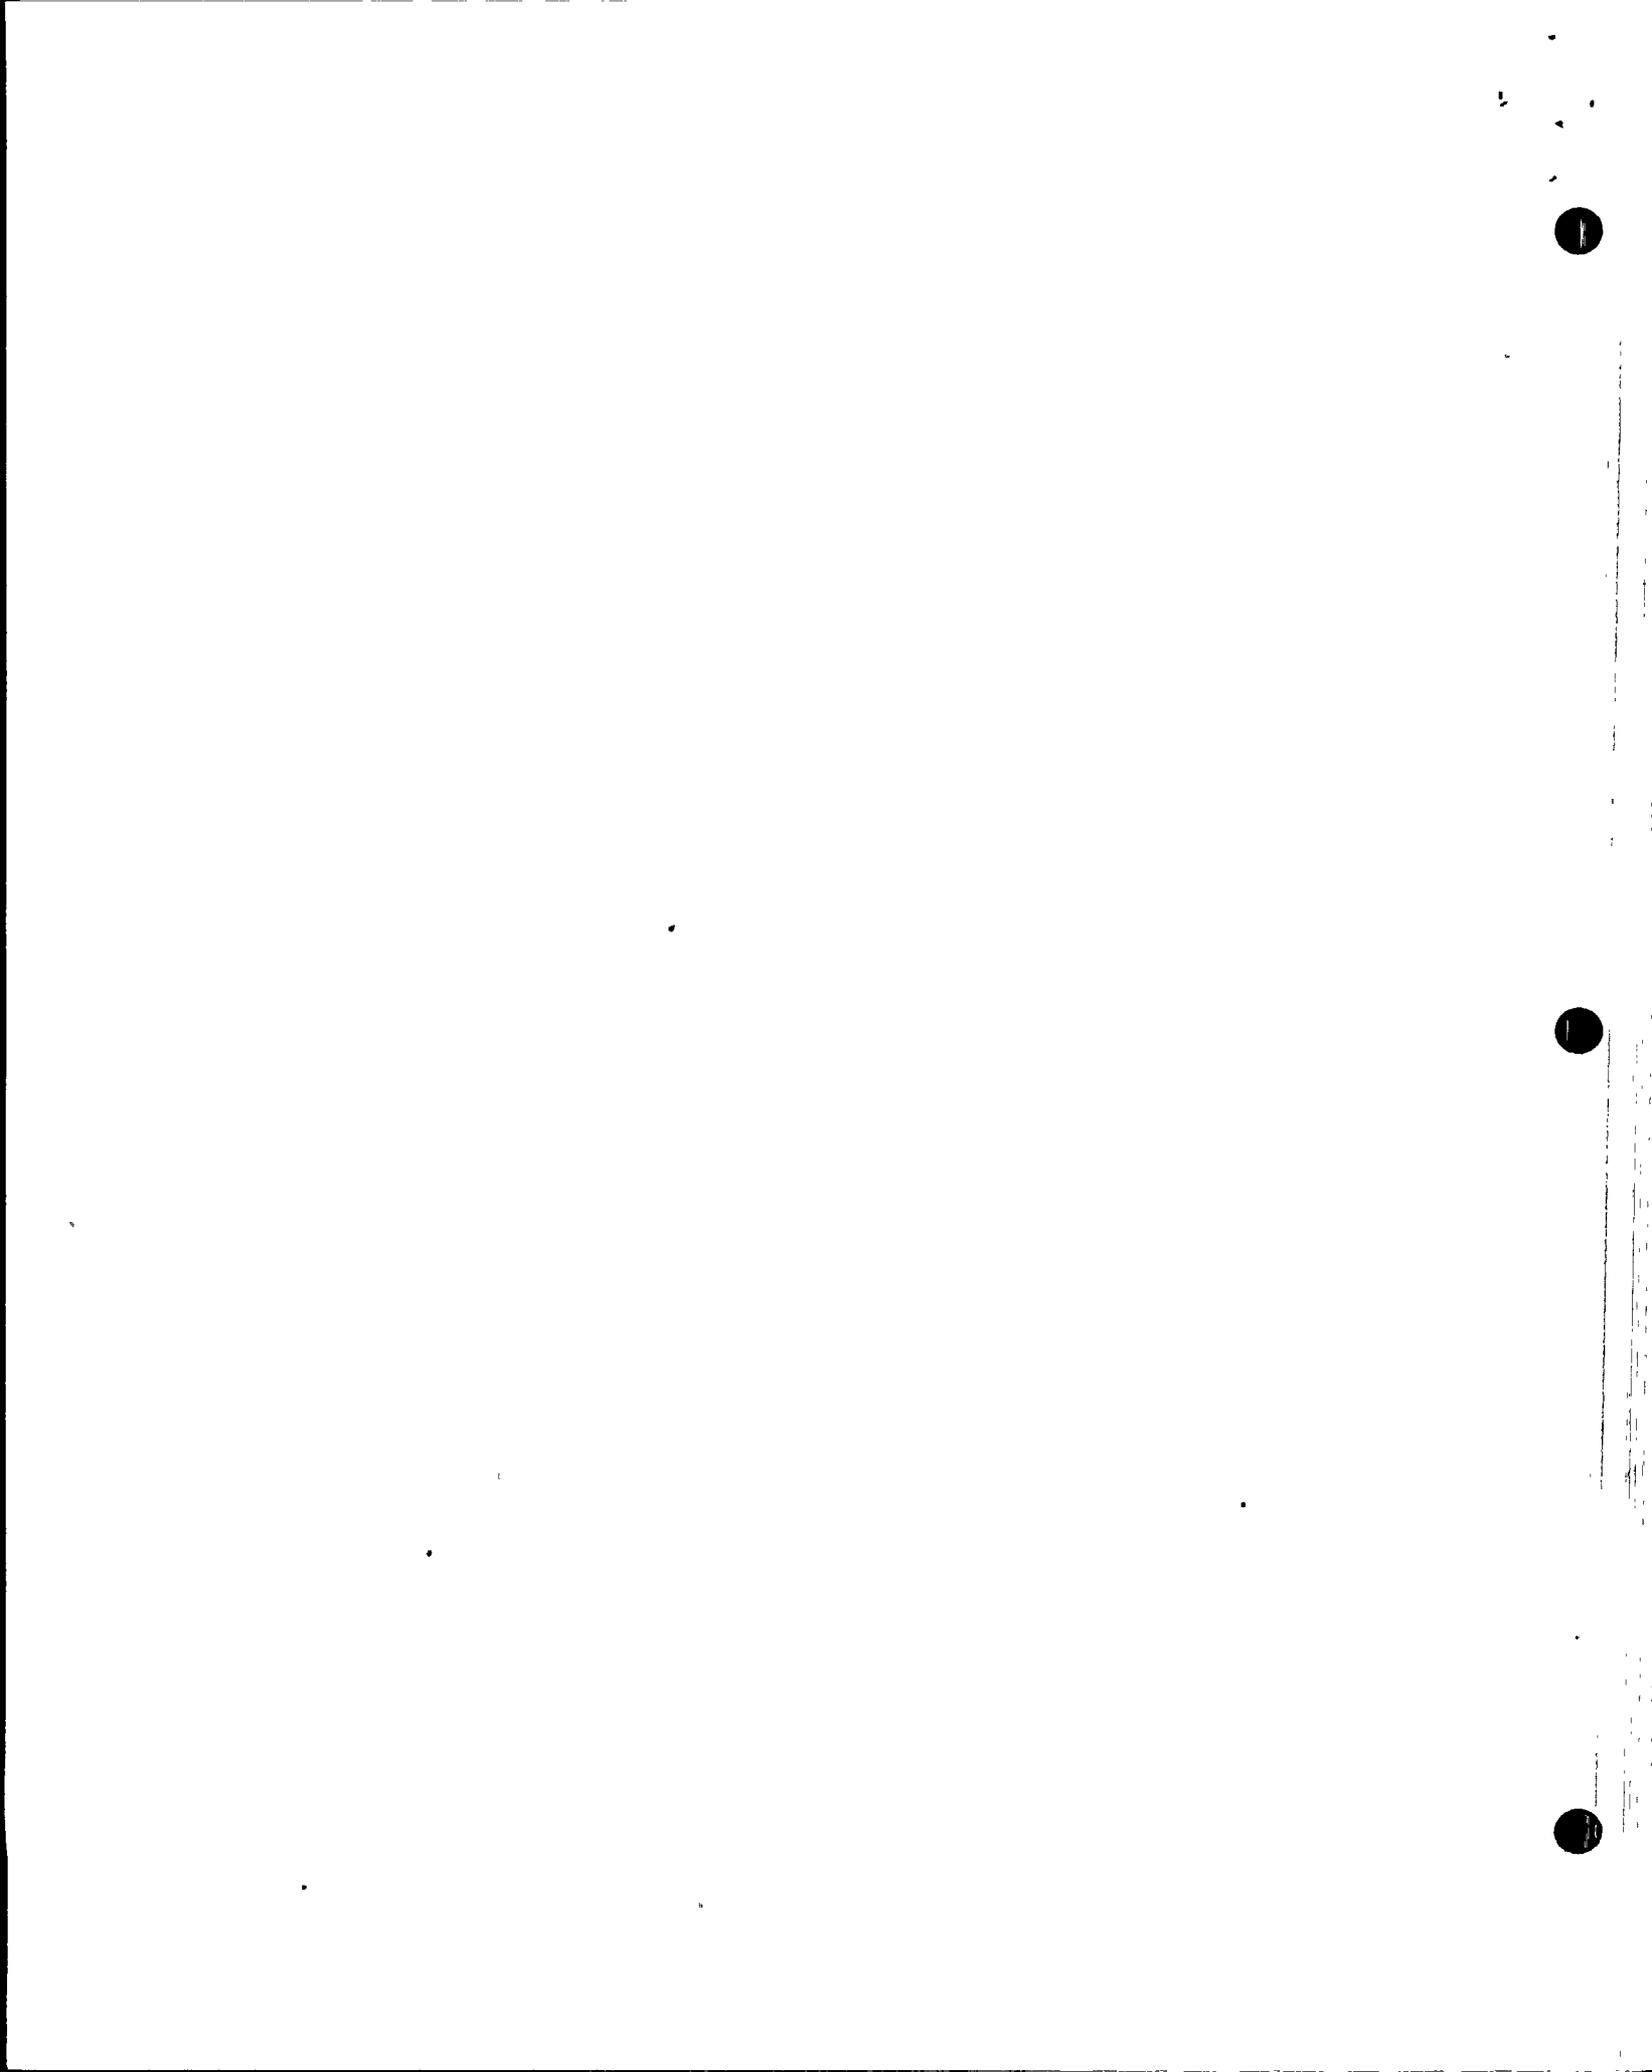

CLASS: 1

FUNCTION: Valves open to provide a flowpath from the Safety
Injection to the Primary Coolant Loop

TEST REQUIREMENTS: Full stroke exercise test every three months.

BASIS FOR RELIEF: These valves can only be exercised by initiation
of flow through the valves and into the Reactor
Coolant System. Safety Injection Pumps are not
sufficient to exercise these valves due to pres-
sure of the Primary Coolant System.

ALTERNATE TESTING: Full stroke exercise these valves during refuel-
ing when the reactor head is removed utilizing the
Safety Injection System.

VALVE RELIEF REQUEST NO. 10

SYSTEM: Safety Injection and Shutdown Cooling

COMPONENTS: SIV523 and SIV533

P&ID & COORDINATES: SIP-002 @ F-2 and F-10

CATEGORY: A, C

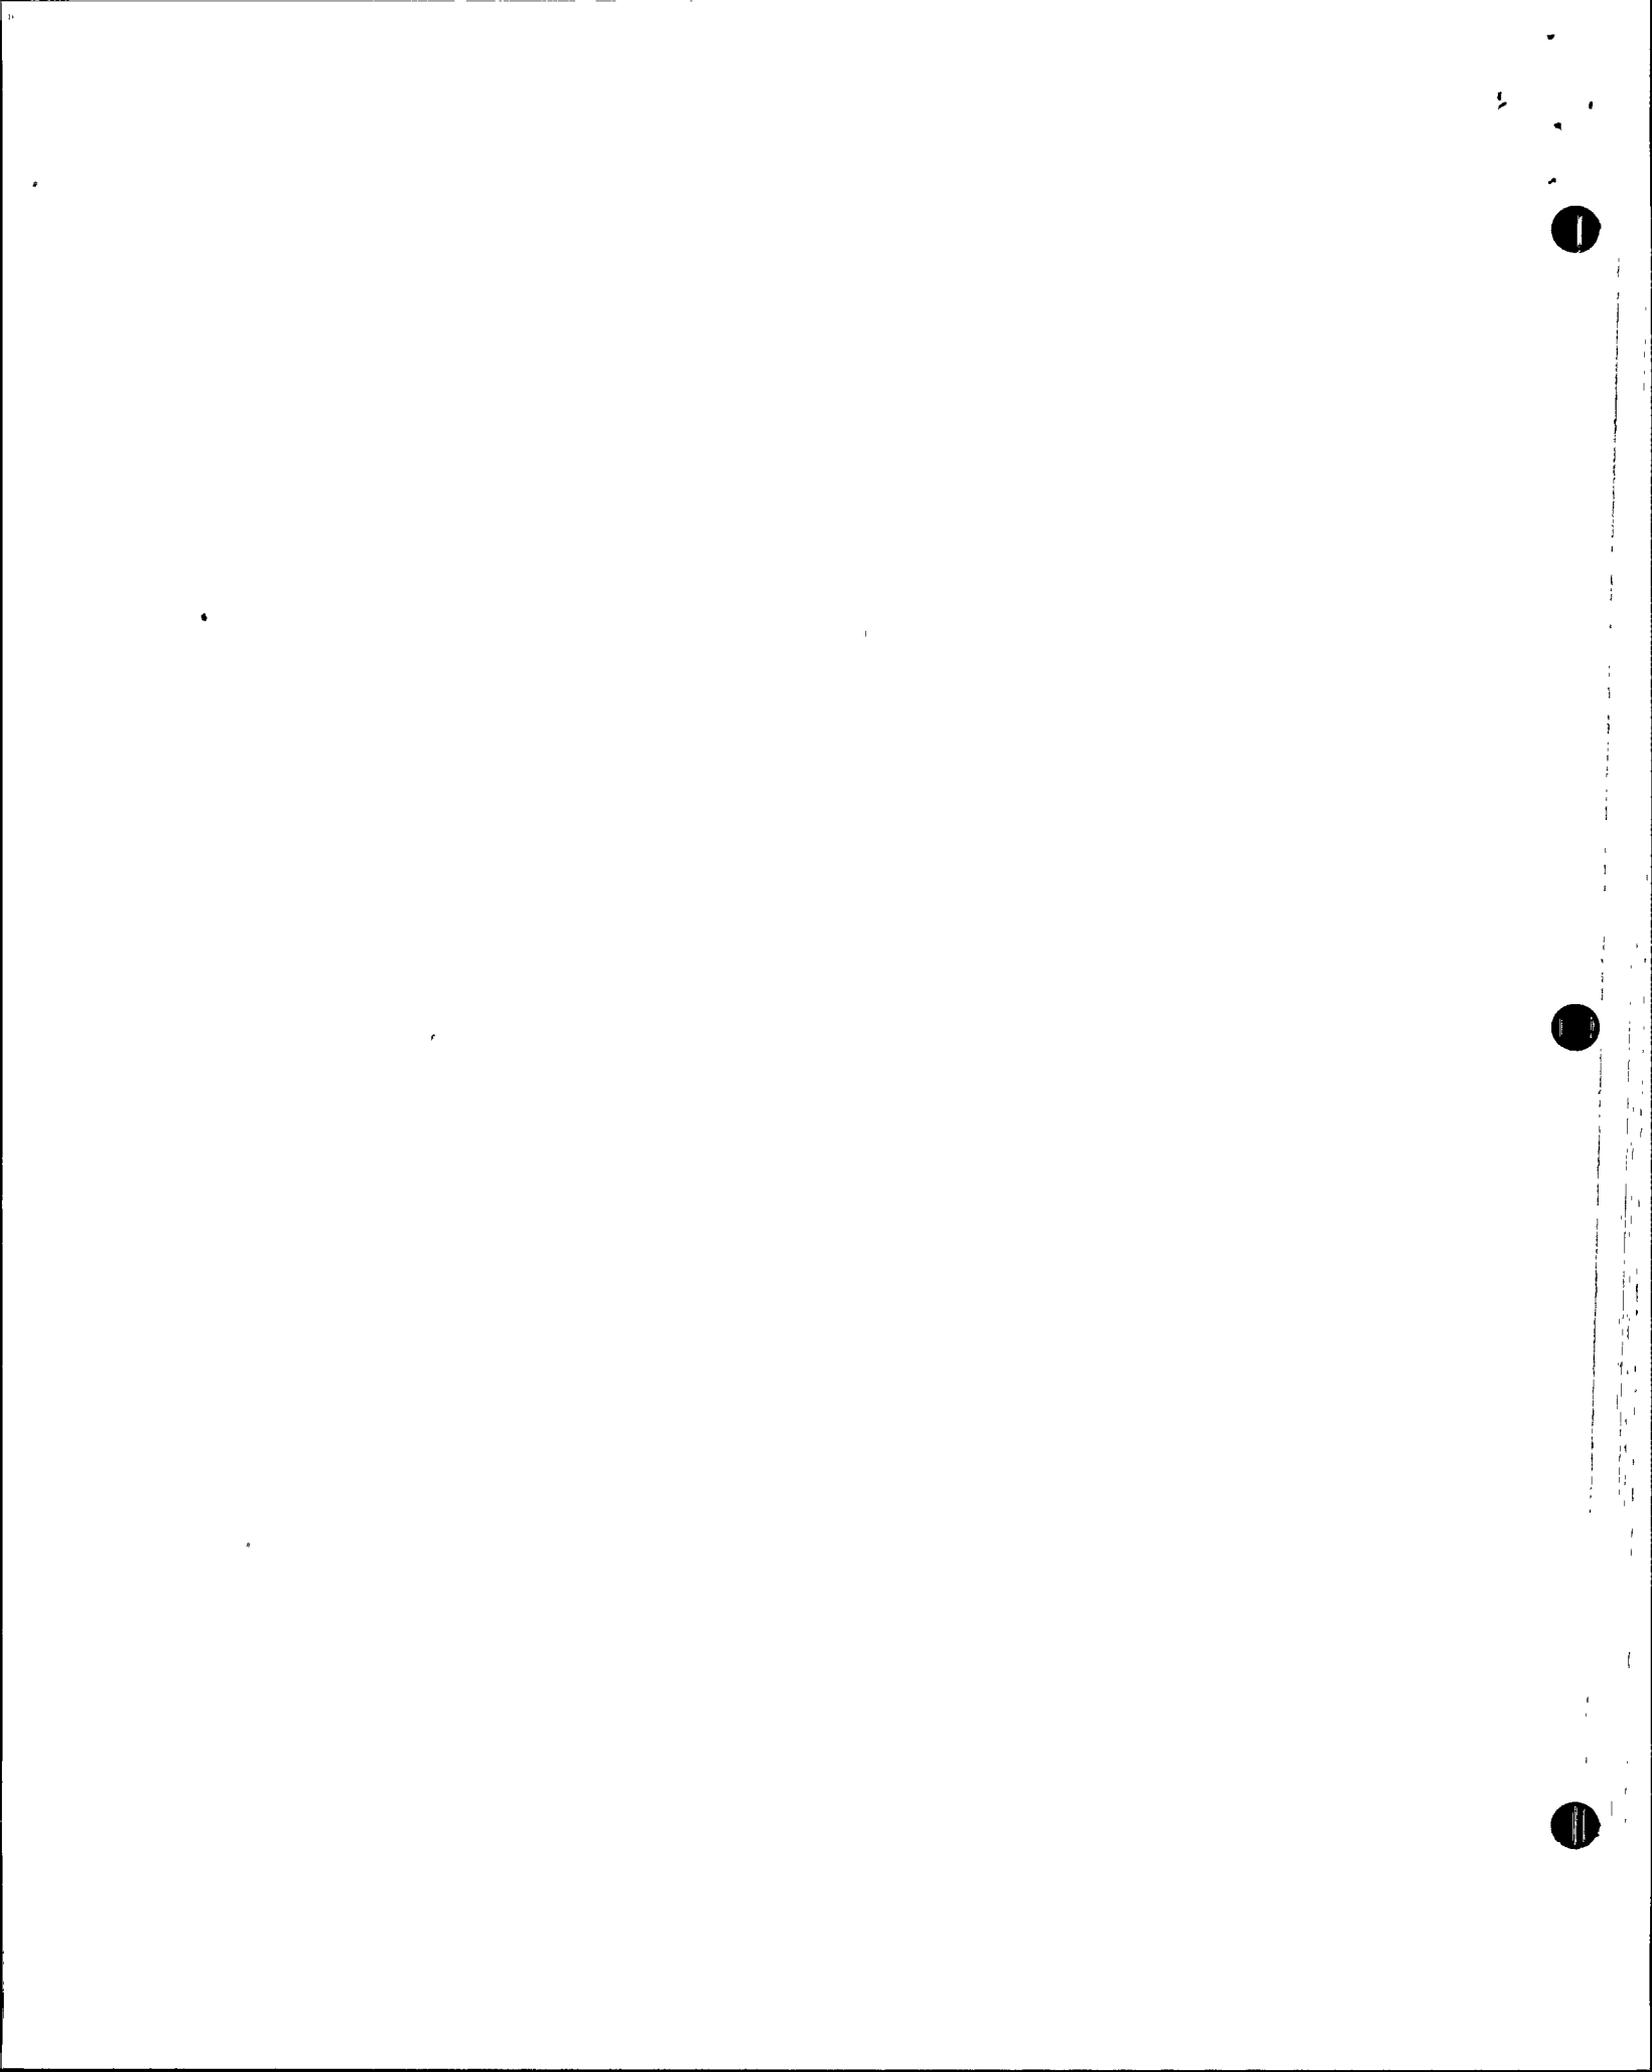

CLASS: 1

FUNCTION: Valves open to provide a flowpath for the HPSI system to the shutdown cooling lines.

TEST REQUIREMENTS: Full stroke exercise test every three months

BASIS FOR RELIEF: These valves can only be exercised by initiation of flow through the valves and into the Reactor Coolant System. Safety Injection Pumps are not sufficient to exercise these valves due to pressure of the Primary Coolant System.

ALTERNATE TESTING: Full stroke exercise test these valves during the refueling mode when the reactor head is removed utilizing the Safety Injection System.

VALVE RELIEF REQUEST NO. 11

SYSTEM: Auxiliary Feedwater

COMPONENTS: AFV015, AFV024, AFV079, and AFV080

P&ID & COORDINATES: AFP-001, E-5, C-6, E-1, C-1

CATEGORY: C

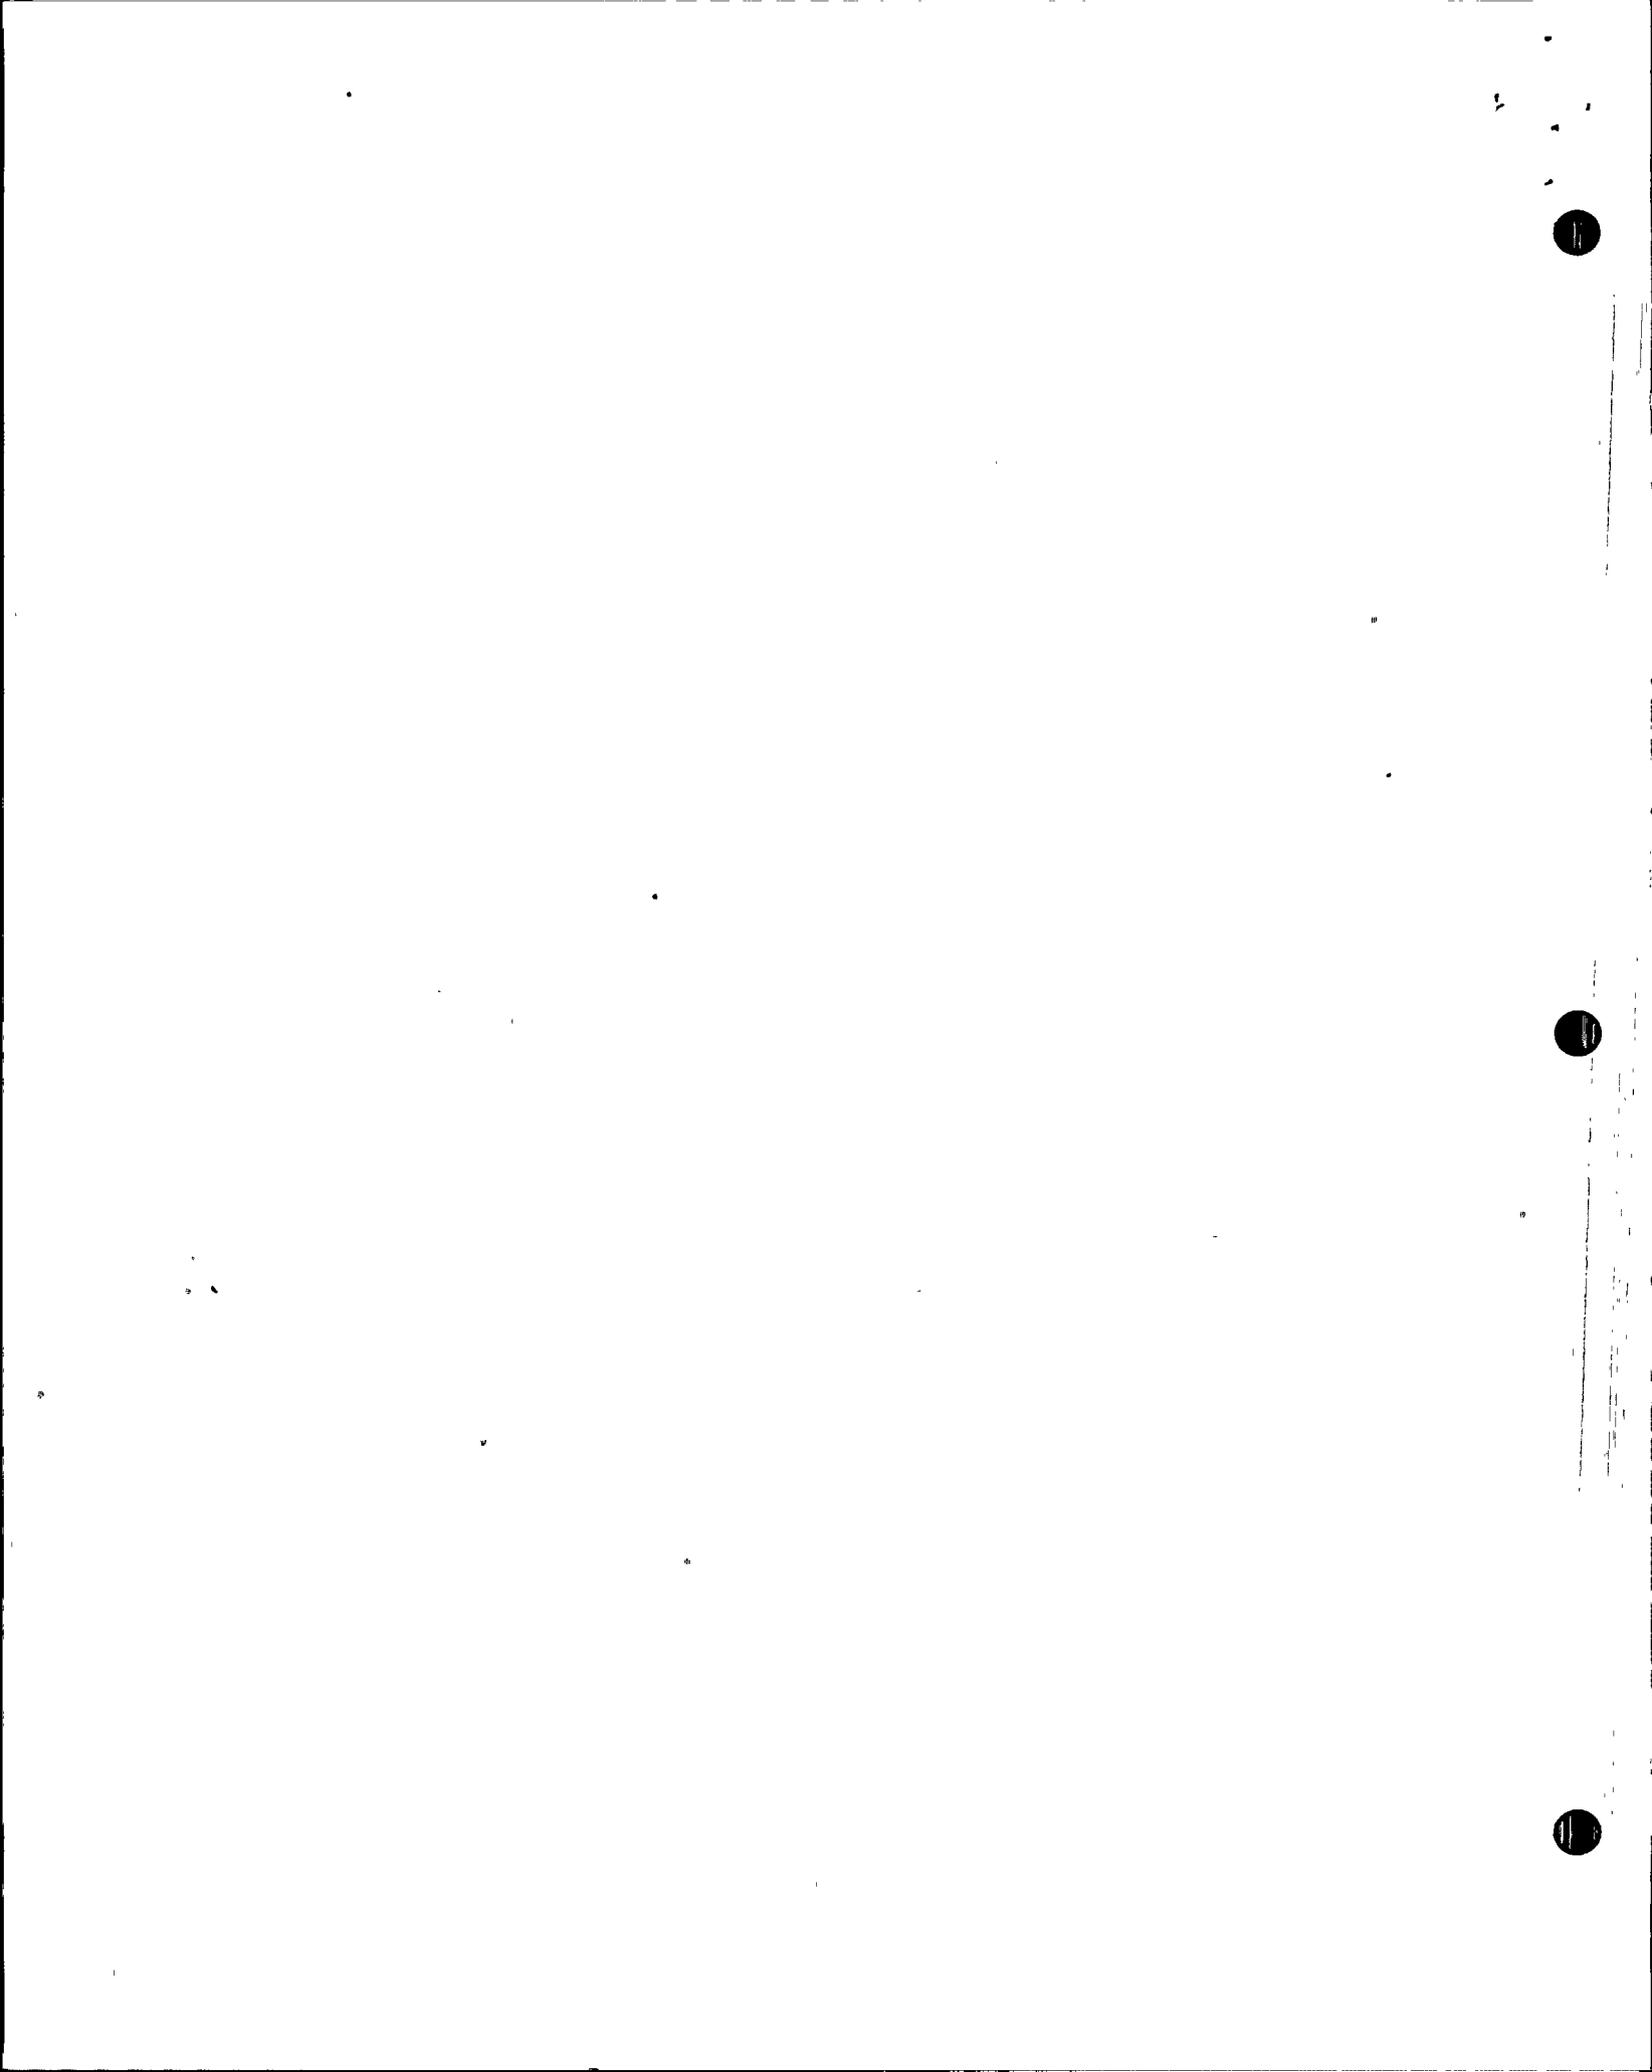

CLASS: 2, 3

FUNCTION: Valves open to provide a flowpath for auxiliary feedwater to the Steam Generators.

TEST REQUIREMENTS: Full Stroke Test every 3 months or Partial Stroke Test every 3 months and Full Stroke Test during Cold Shutdown.

BASIS FOR RELIEF: Stroking these valves during power operation would require injection of cold Auxiliary Feedwater into a hot steam generator. In addition to possibly causing an unwarranted plant transient, this reduces the quality of steam exiting the steam generator.

ALTERNATE TESTING: Full stroke test at cold shutdown.

VALVE RELIEF REQUEST NO. 12

SYSTEM: Chemical and Volume Control

COMPONENTS: CHV431, CH-HV203, CH-HV205

P&ID & COORDINATES: CHP-001 @ G11, H12, G12

CATEGORY: C, B, B

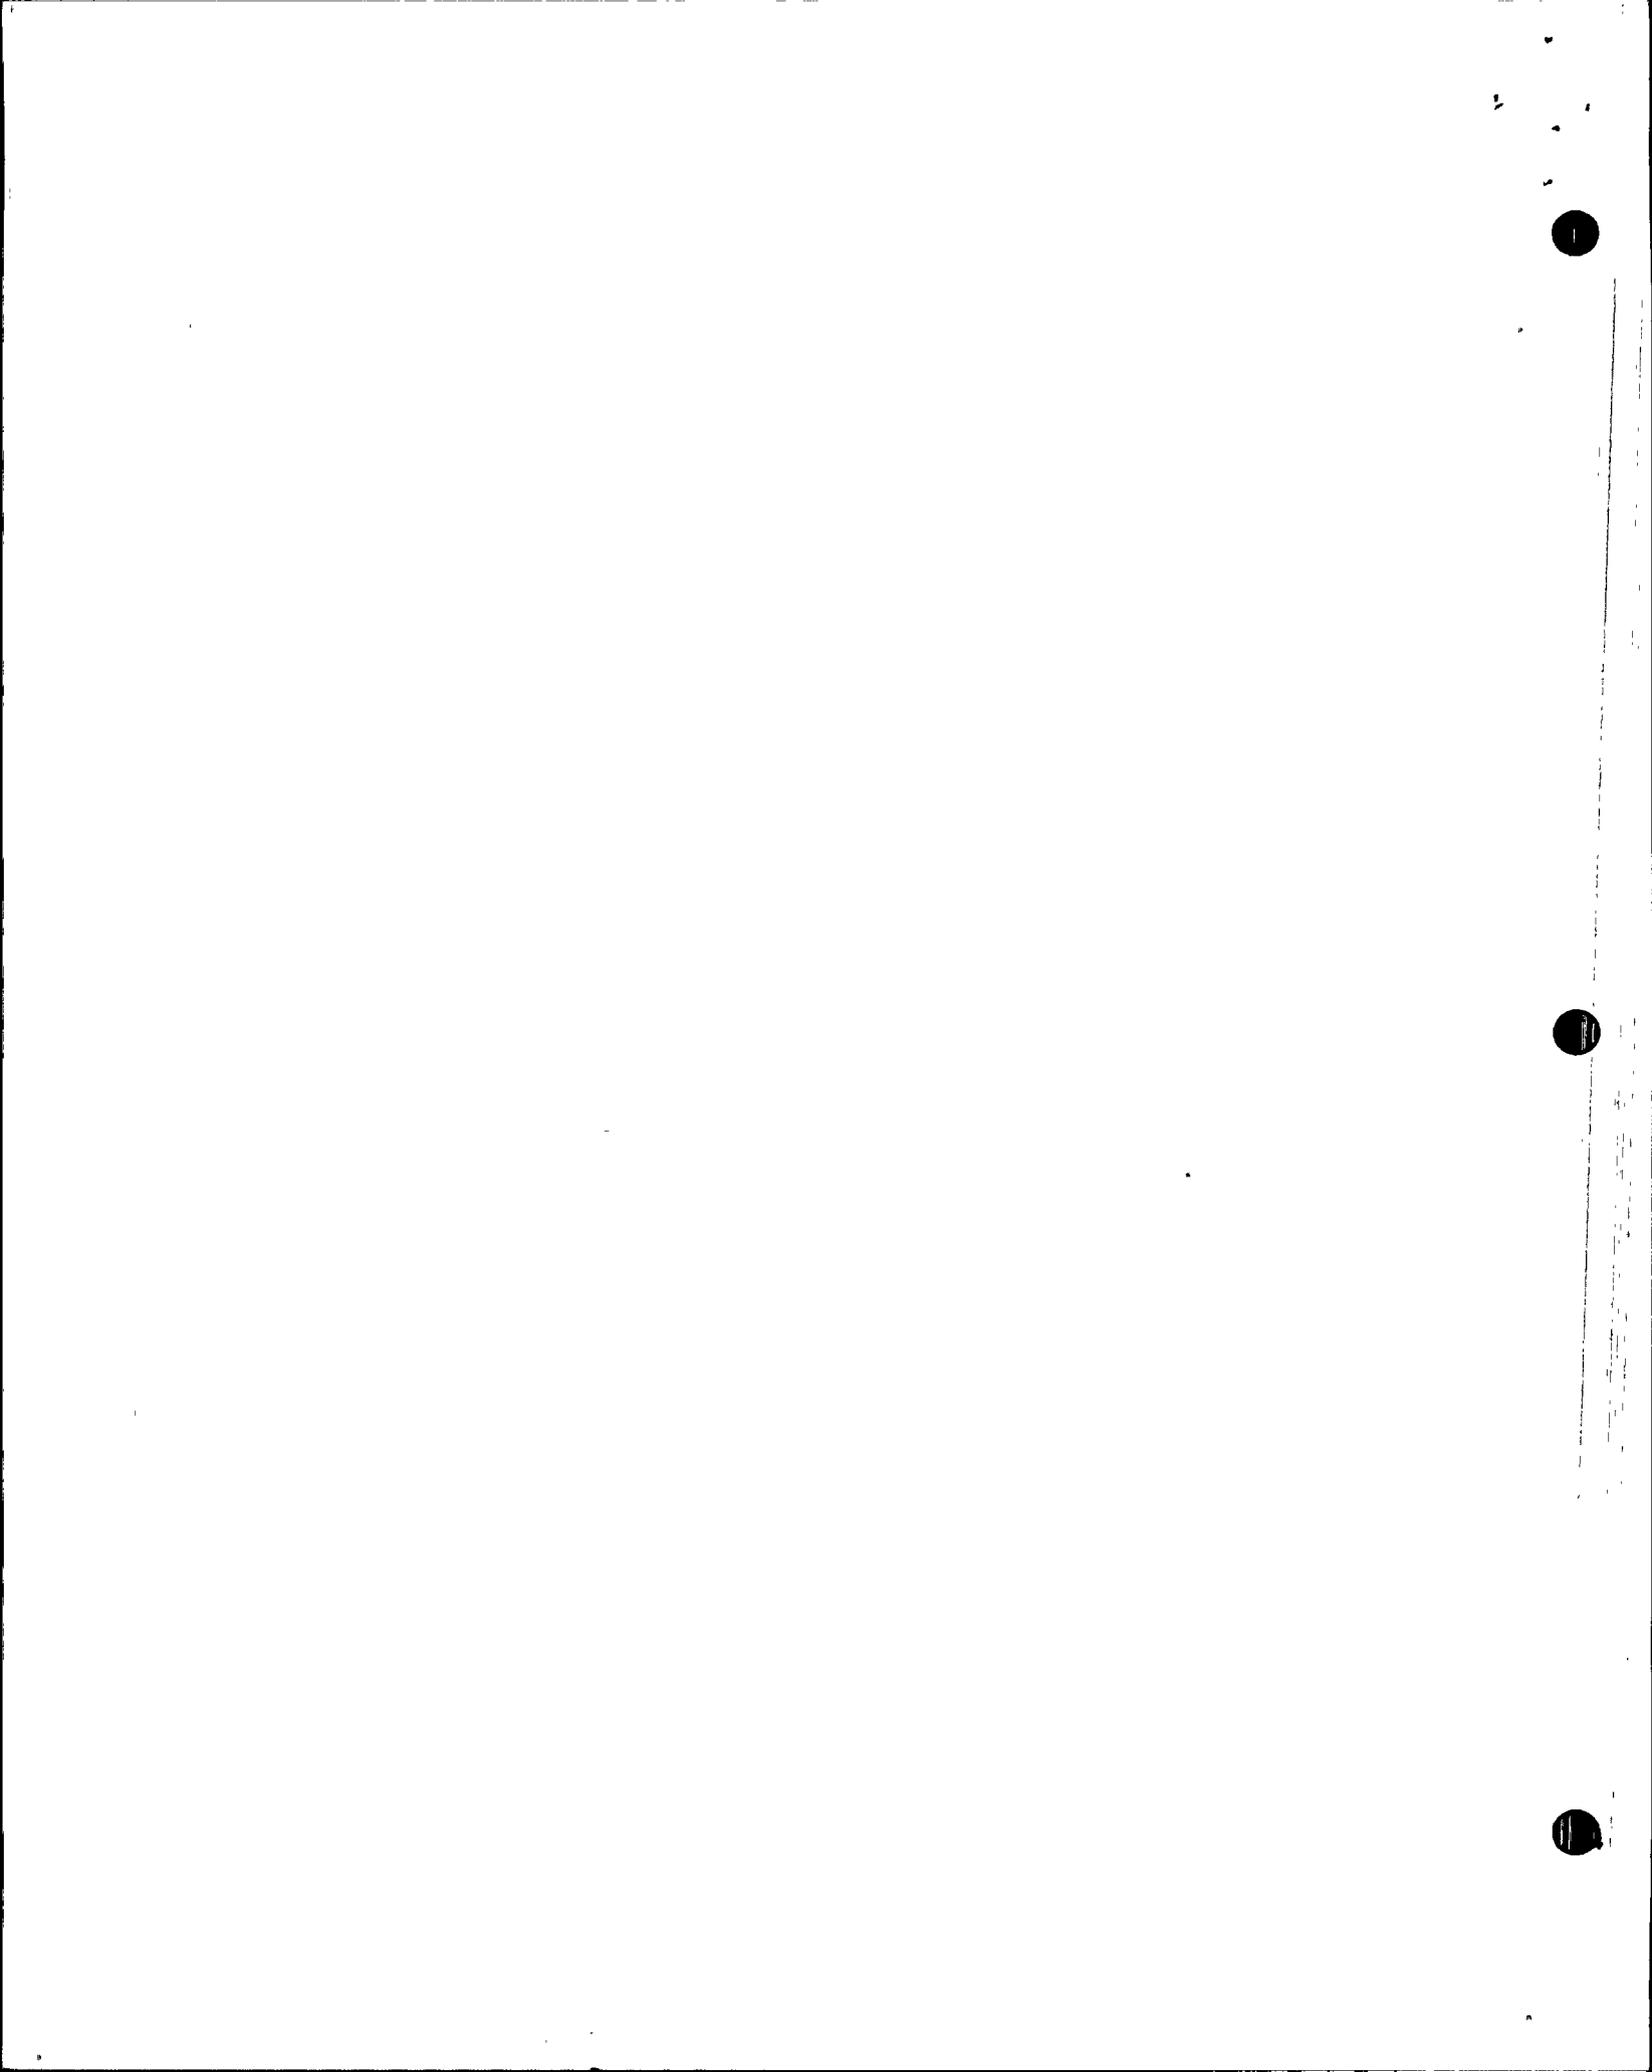

CODE CLASS: 1, 2, 1

FUNCTION: Valves open to provide a flow path for Auxiliary Spray to the pressurizer.

TEST REQUIREMENTS: Full stroke exercise every 3 months or partial stroke exercise every 3 months and full stroke test during cold shutdown.

BASIS FOR RELIEF: Exercising these valves is not possible during power operation. Their function is to protect the charging system from Reactor Coolant System pressure during normal operation and to provide auxiliary spray to cool the pressurizer when the RCS pressure has dropped below the pressure required to use the reactor coolant pumps.

ALTERNATE TESTING: Full stroke test at cold shutdown.

VALVE RELIEF REQUEST NO. 13

SYSTEM: Chemical Volume and Control

COMPONENTS: CHV787, CHV802, CHV807, CHV812, CHV866, CHV867,
CHV868, CHV869

P&ID & COORDINATES: CHP-001 @ 1 E-H

CATEGORY: C

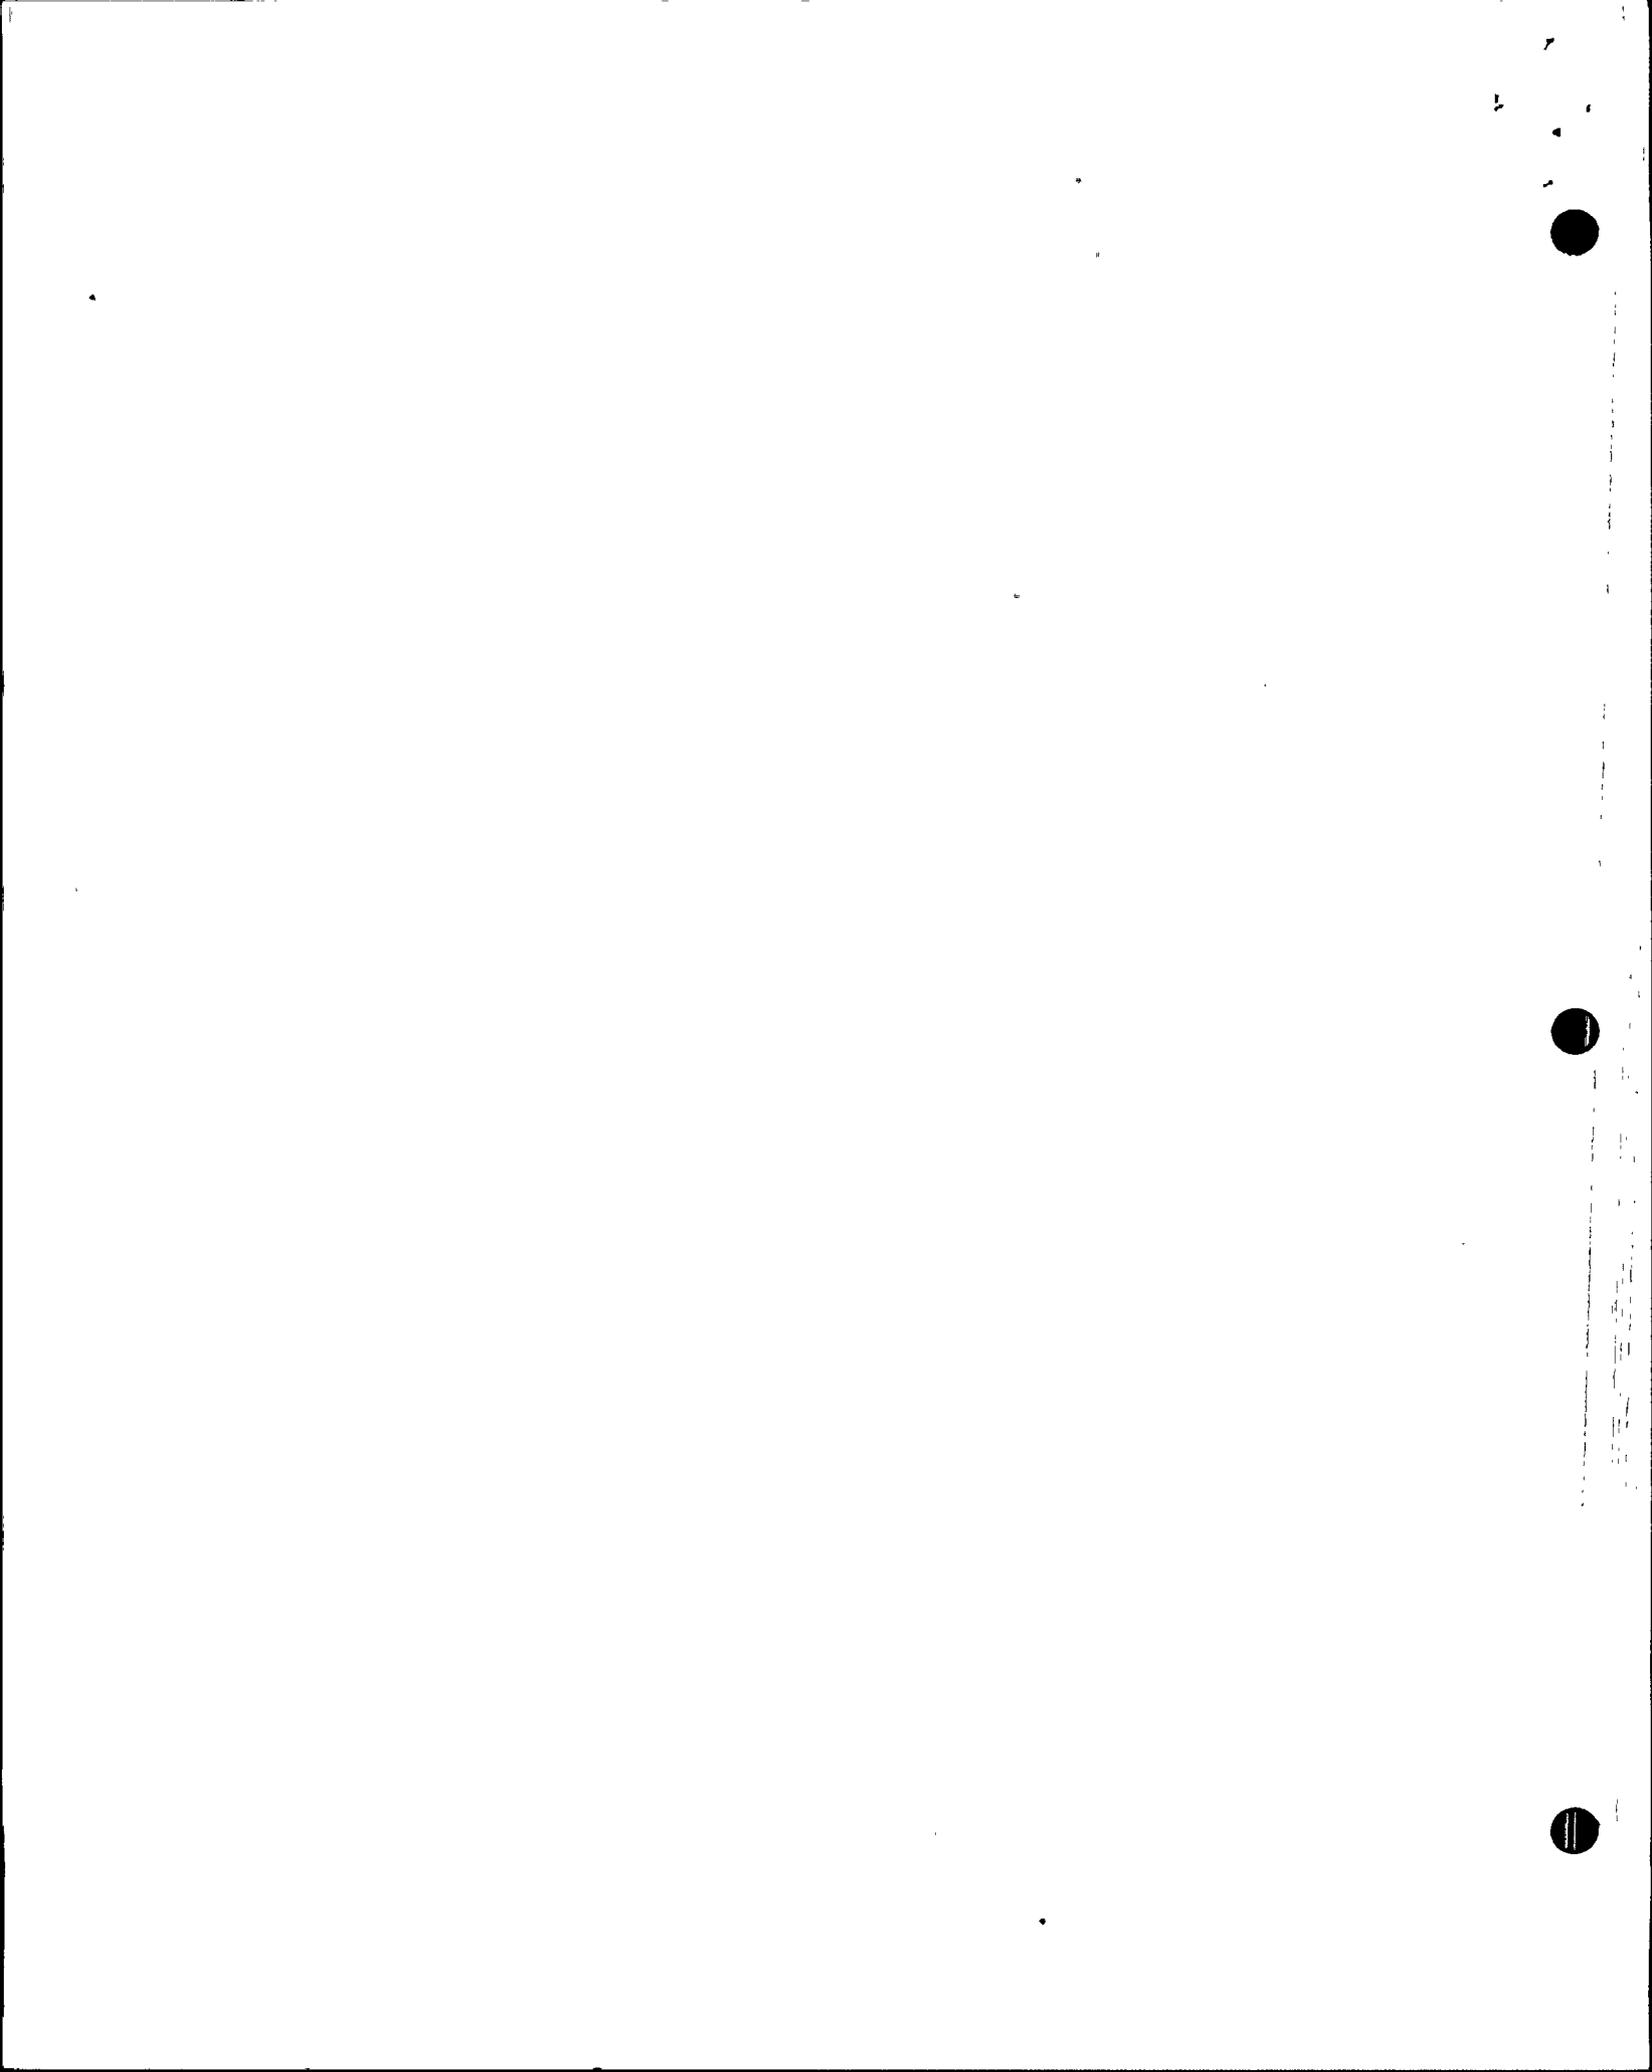

CLASS: 1

FUNCTION: Valves are open to provide a flow path for
seal injection to the reactor coolant pumps.

TEST REQUIREMENTS: Full stroke test every 3 months or partial
stroke test every 3 months and full stroke
test at cold shutdown.

BASIS FOR RELIEF: These valves are open during normal operation
to provide Seal Injection to the Reactor Coolant
Pump. Stroking these valves would require dis-
continuing seal injection to the pumps and com-
promise Reactor Coolant Pump integrity.

ALTERNATE TEST: Full stroke test at cold shutdown

VALVE RELIEF REQUEST NO. 14

SYSTEM: Chemical and Volume Control

COMPONENTS: CH-HV524

P&ID & COORDINATES: CHP-001 @ D16

CATEGORY: A

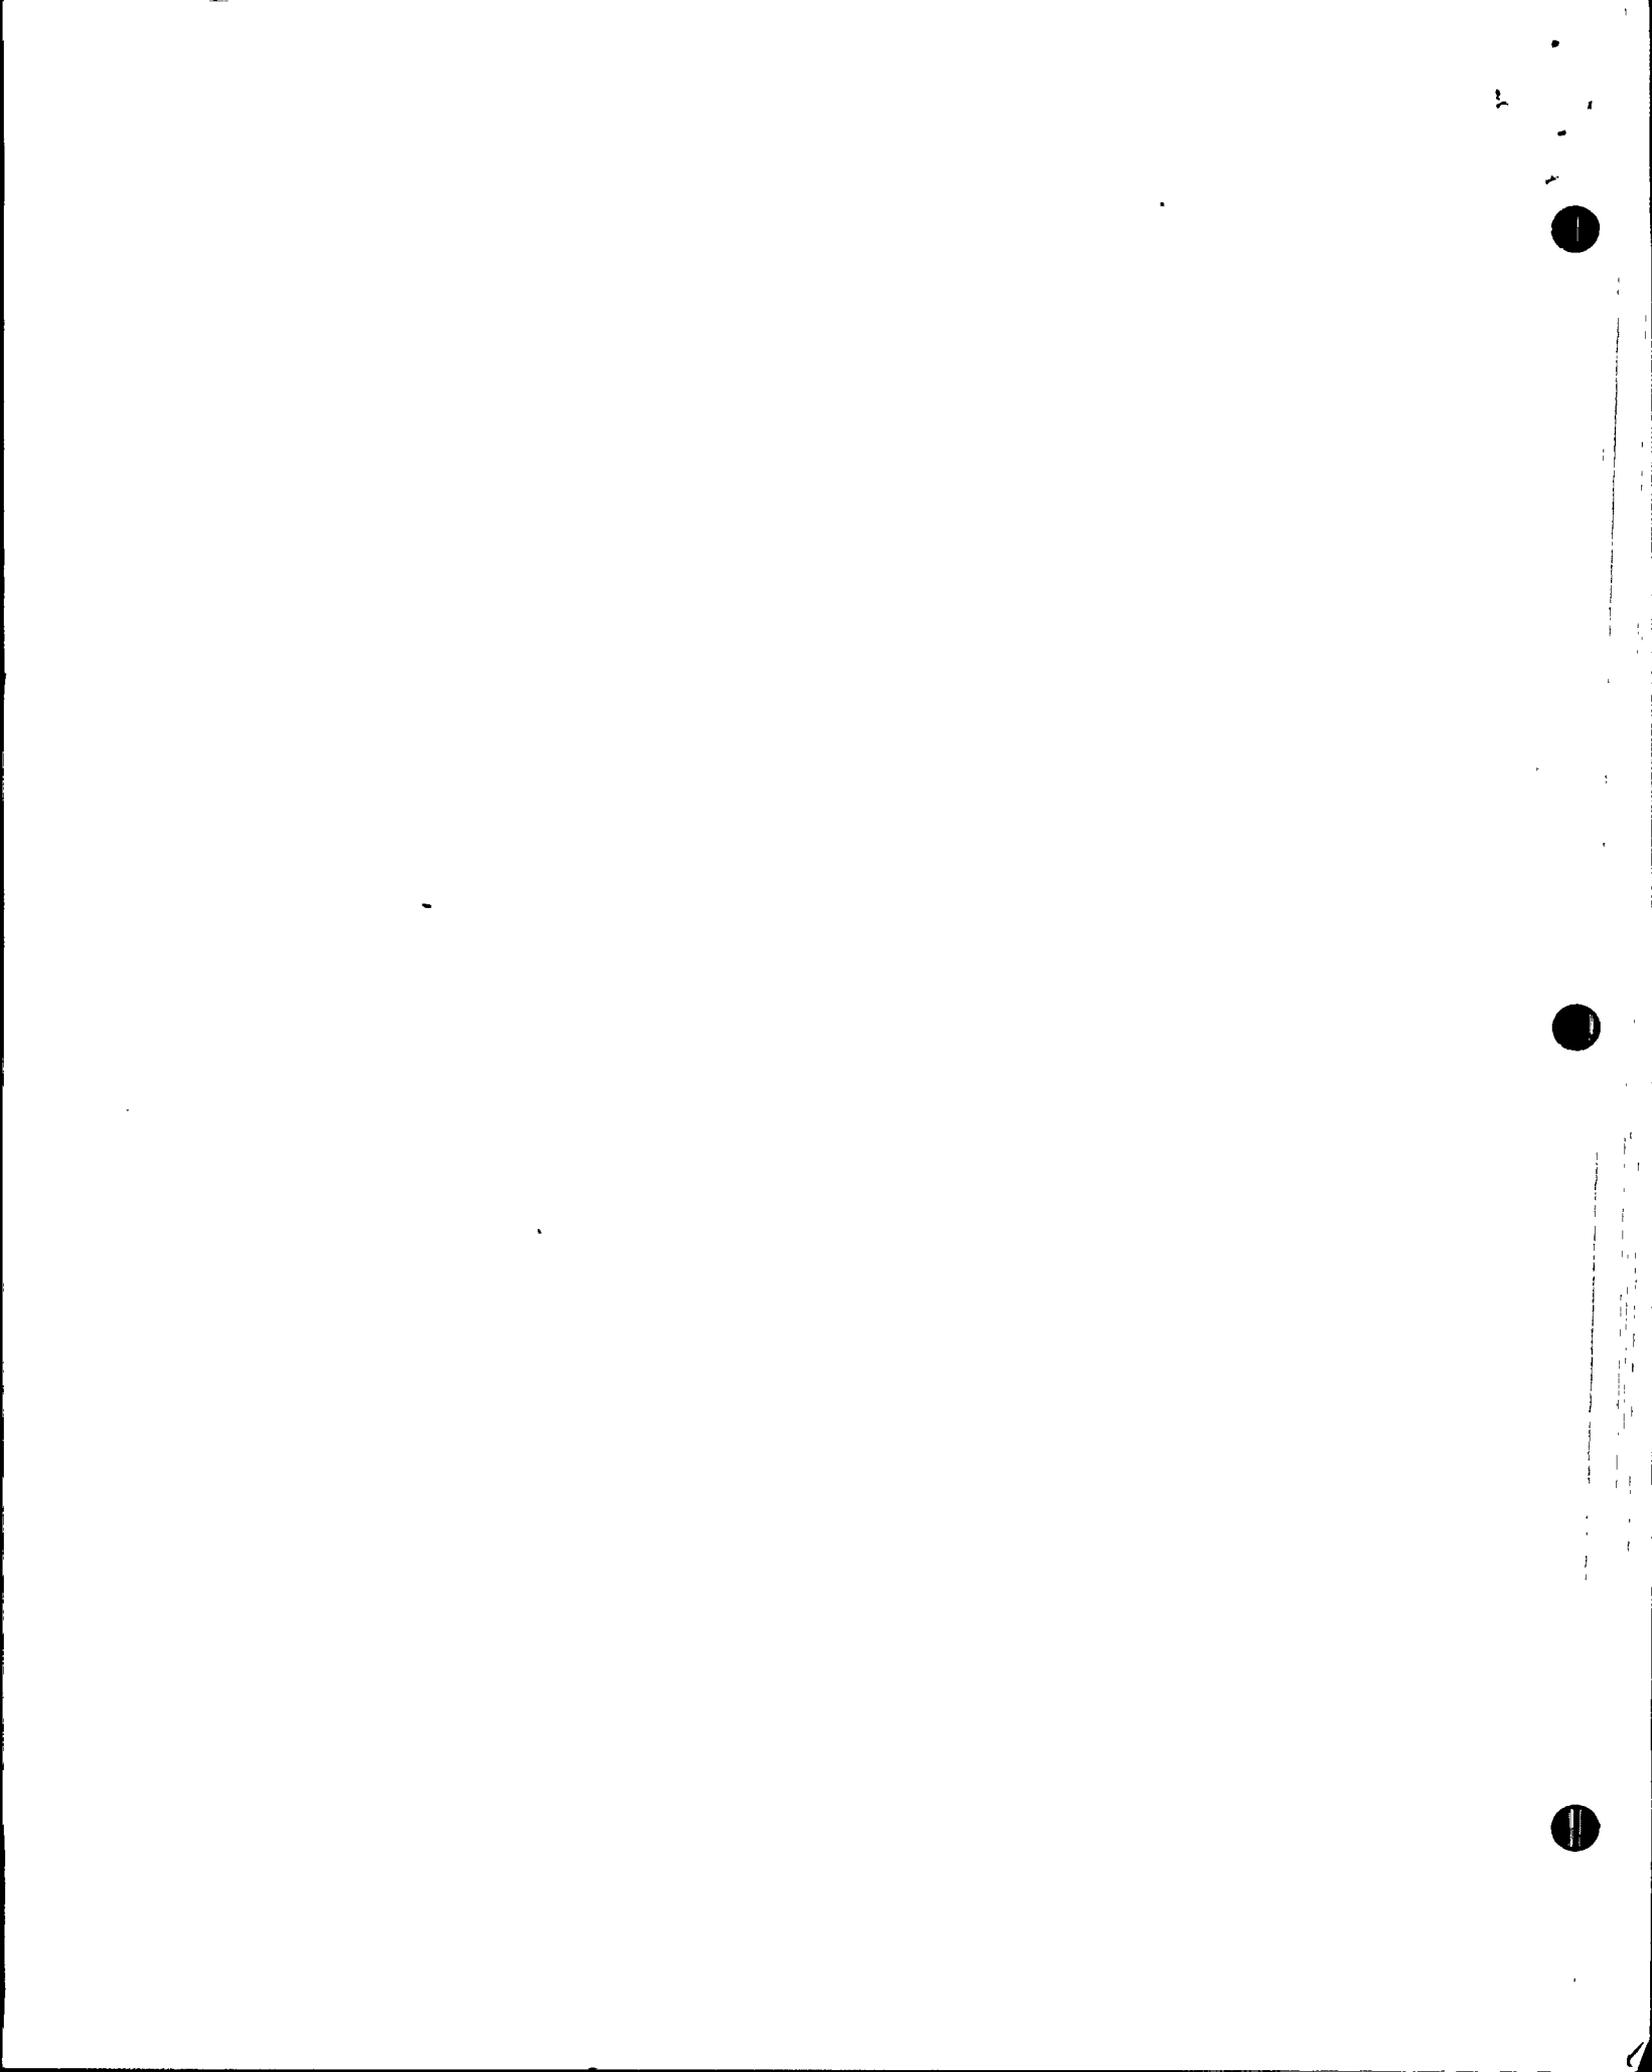

CLASS: 2

FUNCTION: Valve is open to provide a flowpath for the charging flow to the Reactor Coolant System and the pressurizer auxiliary spray.

TEST REQUIREMENTS: Full stroke test every 3 months or partial stroke test every 3 months and full stroke test during cold shutdown.

BASIS FOR RELIEF: This valve is open during normal operation to maintain reactor coolant system chemistry and purity and maintain RCS volume. Stroking this valve during normal operation could upset the chemical balance and cause unwarranted transients.

ALTERNATE TEST: Full stroke test at cold shutdown.

VALVE RELIEF REQUEST NO. 15

SYSTEM:

Nuclear Cooling Water

COMPONENTS:

NCV118, UV401, UV402, UV403

P&ID & COORDINATES:

NCP-003 @ E7

CATEGORY:

A, C

CLASS:

2

FUNCTION:

Valves open to provide a flowpath for nuclear cooling water supply to the reactor coolant pump lube oil coolers.

TEST REQUIREMENTS:

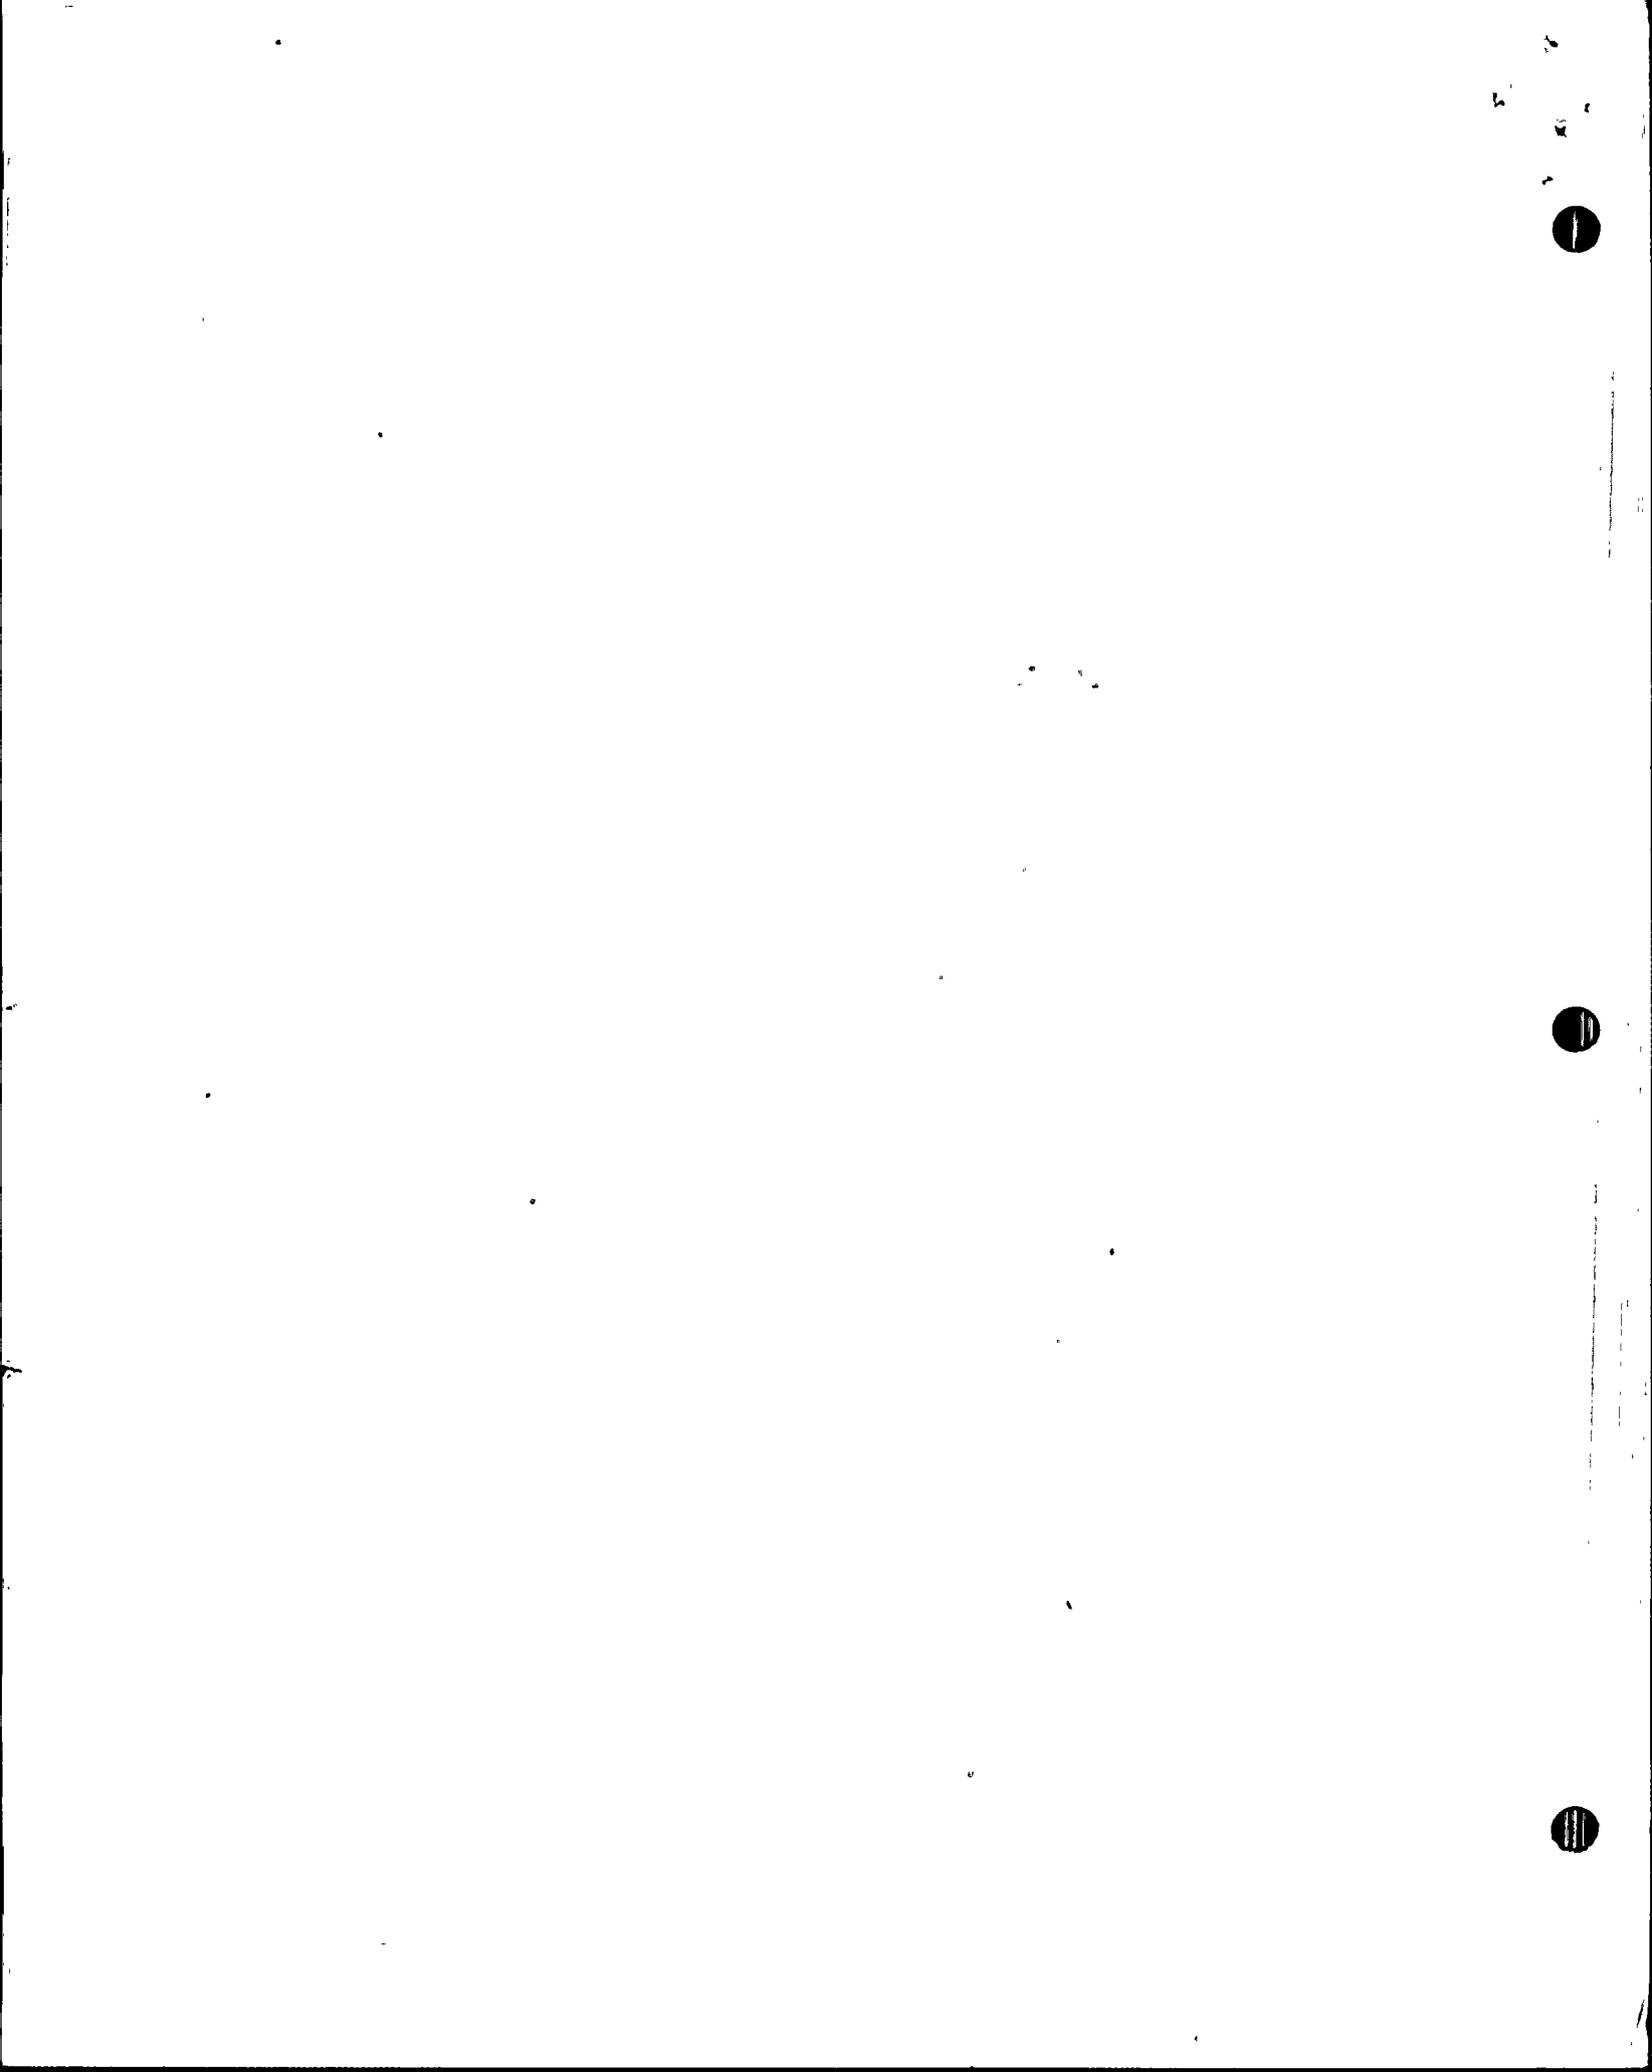

Full stroke tested every 3 months or partial stroke tested every 3 months and full stroke tested at cold shutdowns.

BASIS FOR RELIEF:

This valve is open during normal operation to allow a supply of nuclear cooling water to the reactor coolant pump coolers. Stroking these valves could cause overheating of the reactor coolant pump motor air coolers, lube oil coolers thrust bearing oil coolers, and seal coolers and compromise the integrity of the pumps.

ALTERNATE TESTING:

Full stroke test these valves during cold shutdown.

VALVE RELIEF REQUEST NO: 16

SYSTEM: Main Steam

COMPONENTS: SGV003, SGV005, SGV006, SGV007, SGV642, SGV652,
SGV653, SGV693

P&ID & COORDINATES: SGP-002 @ E10, A10, G10, C10

CATEGORY: C

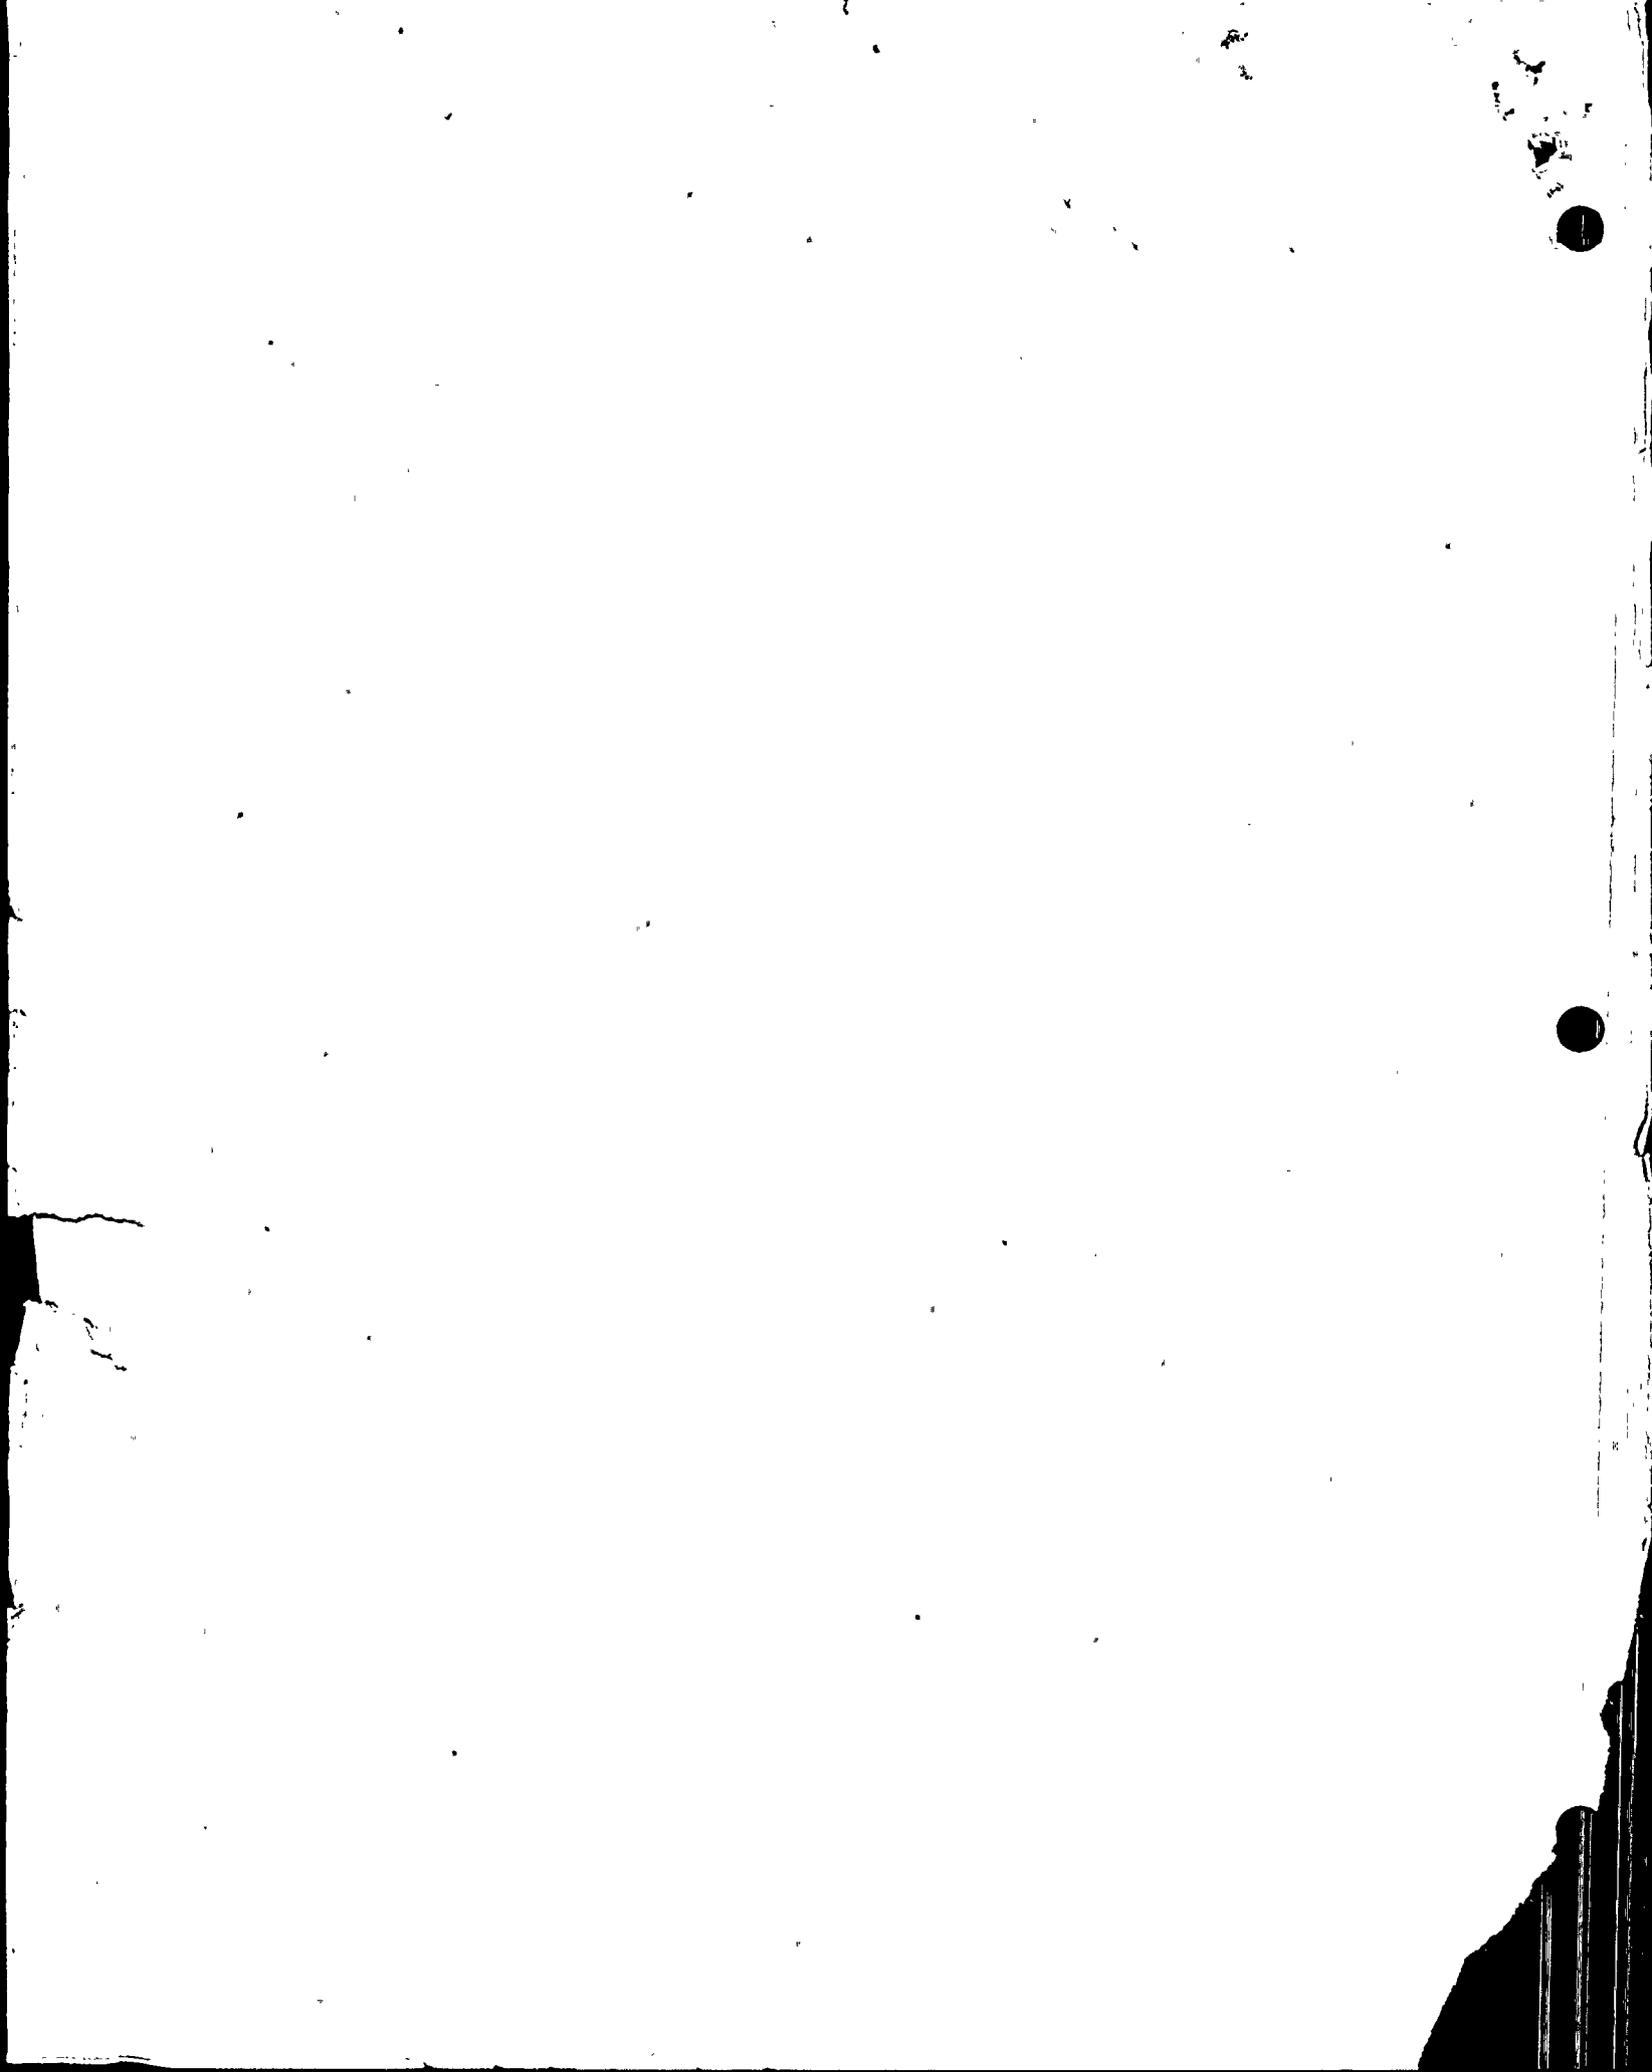

CLASS: 2

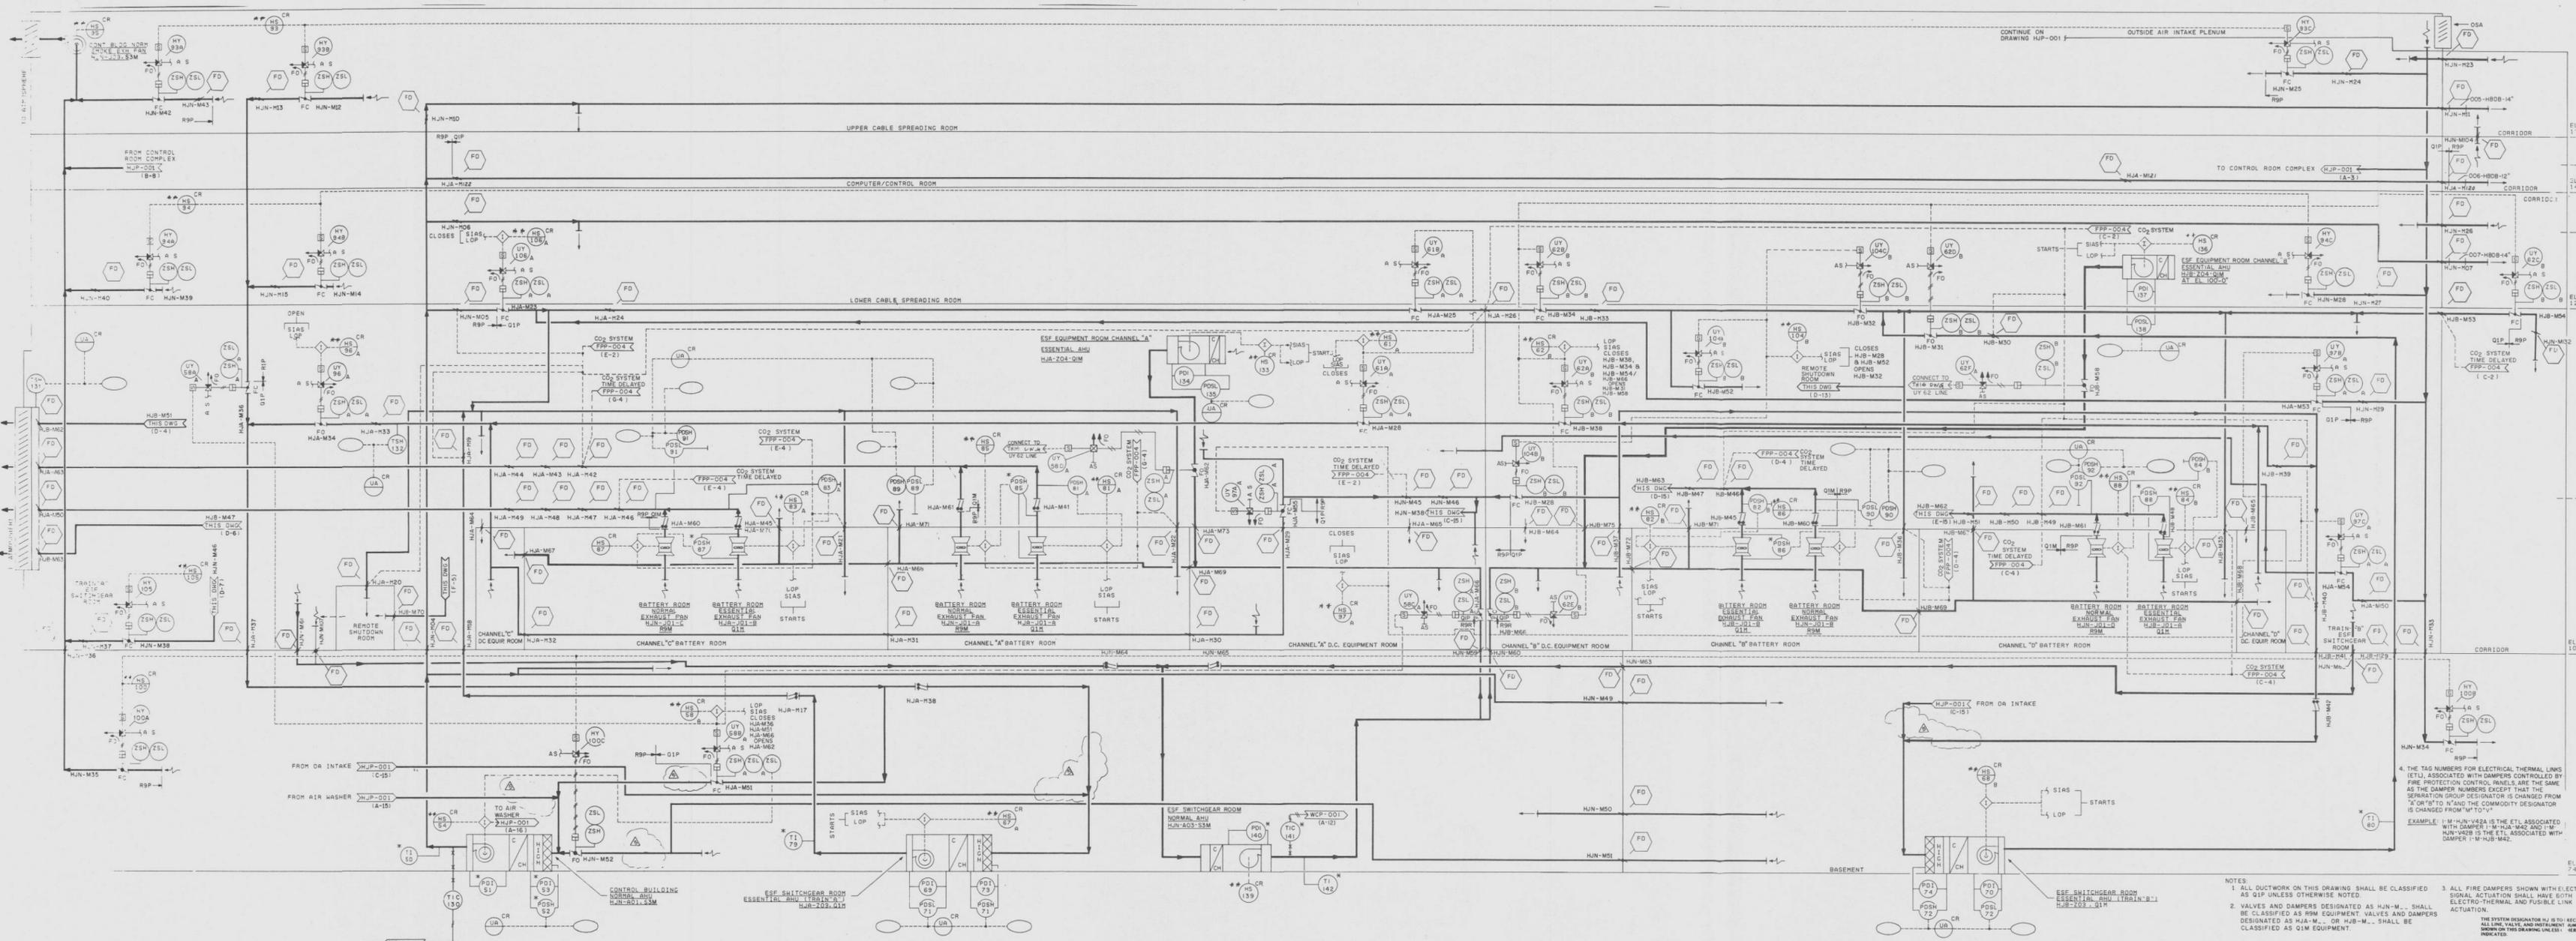

FUNCTION: Valves open to provide a flow path for feed-
water flow to the steam generators.

TEST REQUIREMENTS: Full stroke test every 3 months or partial stroke
test every 3 months and full stroke test during
cold shutdown.

BASIS FOR RELIEF: These valves are in the feedwater inlet lines
to each steam generator and are open during
power operation. Full or partial stroking these
valves during operation could secure feedwater
and cause a reactor trip.

ALTERNATE TESTING: Full stroke test at cold shutdown.

NOTES:
 1. ALL DUCTWORK ON THIS DRAWING SHALL BE CLASSIFIED AS QIP UNLESS OTHERWISE NOTED.
 2. VALVES AND DAMPERS DESIGNATED AS HJN-M... SHALL BE CLASSIFIED AS RM EQUIPMENT. VALVES AND DAMPERS DESIGNATED AS HJA-M... OR HJB-M... SHALL BE CLASSIFIED AS QIM EQUIPMENT.
 3. ALL FIRE DAMPERS SHOWN WITH ELECTRONIC SIGNAL ACTUATION SHALL HAVE BOTH ELECTRO-THERMAL AND FUSIBLE LINK ACTUATION.
 4. THE TAG NUMBERS FOR ELECTRICAL THERMAL LINES (ETL) ASSOCIATED WITH DAMPERS CONTROLLED BY FIRE PROTECTION CONTROL PANELS ARE THE SAME AS THE DAMPER NUMBERS EXCEPT THAT THE SEPARATION GROUP DESIGNATOR IS CHANGED FROM "A" OR "B" TO "N" AND THE COMMODITY DESIGNATOR IS CHANGED FROM "M" TO "V".
 EXAMPLE: 1-M-HJN-V42A IS THE ETL ASSOCIATED WITH DAMPER 1-M-HJN-M42 AND 1-M-HJN-V42B IS THE ETL ASSOCIATED WITH DAMPER 1-M-HJN-M42.
