Subject: RE: Re: Re: Request for Additional Information

Mr. Kent,

We have reviewed the information provided in your e-mail dated October 19, 2017. We found that additional clarification is needed. Please provide the information requested below:

* On Page 2, you provide the new maximum values including the tolerances. We noted that the values are presented in what seems to be a range. Please confirm that the values presented in the column named Activity represent the range of activities from a minimum to a maximum value.

* Regarding the activities of the sources, we noticed that the "maximum values" listed for different capsule codes containing the same isotopes are different. Please explain why.

* The table submitted in your amendment only shows values for Ba-133, Cd-109, and Fe-155. Please note that since your address has changed and the values for the source activities have also changed, both of your registration certificates will have to be updated. Therefore, please provide the maximum activity for the sources that contain Co-57 and Sn-119m.

* Please provide a list of the maximum activity expected for each isotope that includes the 10 % loading tolerance. This information is included on the first page of each registration certificate.

Please submit the requested information within 30 calendar days of the date of this email. A reply to this email will be sufficient. If we have not received the complete information within 30 days, we will consider your application as having been abandoned by you. This is without prejudice to the submission of a complete new application.

Thanks

Lymari Sepulveda
