Main Office Inspection Next Inspection Date: July 24, 2019

Field Office Inspection _____

Temporary Job Site Inspection _____

PROGRAM SCOPE

This was an unannounced, routine inspection of a small private company specializing in real-time scanning services of industrial towers and tanks. The licensee is authorized to use Cs-137(6), Co-60(14) and Cf-252(2) sealed sources within a customized source holder system to perform structural analysis of materials. While the company is based in Sarnia, Ontario, Canada, the licensee maintains a US mailing address. All sources were stored at the Canadian office and transported to the US for specific jobs at temporary job sites. At the time of the inspection, the licensee did not have any temporary job sites in NRC jurisdiction. The inspection was performed through several telephone conversations and a review of documents were email to the inspector because the licensee dose not have an office in the US.

Performance Observations

The inspector reviewed a selection of available records such as inventories, hazmat training, audits, leak tests, and dosimetry. Through these documents and other discussions, the inspector found the licensee's RSO to be knowledgeable of radiation protection principles and regulatory requirements. The RSO committed to inform the inspector about any future job sites in NRC jurisdiction.

No violations of NRC requirements were identified as a result of this inspection.
