LICENSEE:

The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

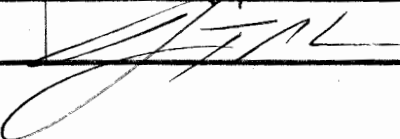

- 1. Based on the inspection findings, no violations were identified.
- 2. Previous violation(s) closed.
- 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy, to exercise discretion, were satisfied.

Non-cited violation(s) were discussed involving the following requirement(s):

- 4. During this inspection, certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited in accordance with NRC Enforcement Policy. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11.
(Violations and Corrective Actions)

Statement of Corrective Actions

I hereby state that, within 30 days, the actions described by me to the Inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.

Field Office Inspection _____

Temporary Job Site Inspection _____

PROGRAM SCOPE

This was a routine, unannounced inspection of the licensee's industrial gauge servicing program. The licensee is located in North Royalton, Ohio, and held an NRC license that authorized the possession of specific radionuclides as analytic samples for leak tests of sealed sources contained in customers' fixed gauges, and servicing of fixed gauges in states where the NRC maintains jurisdiction. At the time of the inspection, BSK had ten employees, four of which were trained authorized user field service technicians (AUs). The licensee did not take possession of material at clients facilities where service was performed. Licensed work in NRC states was predominantly performed in Michigan and Indiana.

PERFORMANCE OBSERVATIONS

The inspector interviewed the radiation safety officer (RSO). The RSO provided the inspector with an overview of the licensee's program and the services that BSK provided to its clients. Fixed gauge shutter repair was the most common service that was provided by the licensee, according to the RSO. The RSO described the use of calibrated survey meters while conducting service. Trained AUs wear personal dosimetry when performing service on industrial gauges. Dosimetry was exchanged on a quarterly basis.

The inspector observed the possession of survey meters used by AUs, and reviewed a random selection of training records, dosimetry results between 2014-2017, and service and survey meter calibration records.

No violations of NRC requirements were identified.
