Re: Mail Control Number 593032

Mr. LaFranzo,

I am writing to follow-up on your email request (November 2, 2017) for additional information for the Central Michigan University application for a license amendment. Within the bounds of NRC release criteria, residual radioactive material authorized under license number 21-01432-02 that was received, possessed, used, or stored in Brooks Hall and CART Building has been removed from those locations of use.

I have personally verified that all licensed radioactive materials including sealed sources and radioactive waste have been removed from Brooks Hall and the CART Building. Additionally, Chase Environmental Group, Inc. remediated locations of residual radioactivity identified during characterization surveys and conducted a MARSSIM-based final status survey in each usage area after remediation and/or removal of radioactive material. The results of the final status surveys verify that any residual contamination is within the bounds of NRC's release criteria. I have also verified that all radioactive markings have been removed from the buildings.

Let me know if you have any further questions. My phone number is (989) 774-4189.

Sincerely,

Jennifer Walton, Ph.D., CIH
