Gentlemen:

Re: St. Lucie Unit 1
Docket No. 50-335
Proposed License Amendment
Breathing Air System

In accordance with 10 CFR 50.90, Florida Power & Light Company (FPL) submits herewith a request to amend Facility Operating License DPR-67.

FPL has planned a plant improvement modification which will enhance the station breathing air system by adding new containment isolation valves on the station air header to containment, and by adding a breathing air aftercooler. These new containment isolation valves will have valve tag numbers different than the valve tag numbers of the presently installed containment isolation valves. Therefore, Technical Specification Table 3.6-1, "Containment Leakage Paths" and Table 3.6-2, "Containment Isolation Valves" must be revised to reflect the new valve tag numbers.

This proposed amendment is similar to that proposed for St. Lucie Unit 2 on October 19, 1984 (L-84-280) and approved by NRC as Amendment No. 10 to Facility Operating License NPF-16.

Marked up copies of the affected Technical Specification pages are included as Attachment 1. A Safety Evaluation in support of the proposed amendment is included as Attachment 2. A "Determination of No Significant Hazards Considerations" is provided as Attachment 3.

The proposed amendment has been reviewed by the St. Lucie Facility Review Group and the Florida Power & Light Company Nuclear Review board.
