SUBJECT
Clarification Teleconference

SUMMARY
NRC participants: Chris Allen and Yong Kim

After the call commenced at approximately 2 P.M., the NRC asked if the tolerance changes associated with the application applied only to the drawing submitted with the application. Neutron Products replied that they did. Next, the NRC asked if any structural components or structural design changes were being made to the package by changing the drawing. Neutron Products indicated that the drawing changes neither resulted in changes to structural components nor produced changes in the package structural design. Neutron Products stated that these changes were being made to address previous NRC inspection findings. As a result of these inspection findings, Neutron Products revised the drawing to remove information which was more appropriate for fabrication and repair drawings as well as to add information which the licensing drawing lacked. The call ended at approximately 2:25 P.M.
