December 1, 1995

The Honorable Fife Symington Governor of Arizona State Capitol Ninth Floor, West Wing Phoenix, AZ 85007

Re: The Future Offers Options and Opportunity

Dear Governor Symington:

Last year, in the 50th Anniversary edition of the Arizona Power Authority (Authority) Annual Report, we saw that each decade had its milestone. The issue for the 1990s is the "defederalization" of the federal power marketing administrations (PMAs).

The sale of federal power marketing agencies and other federal assets has been a recurring theme in Congress over the past decade, primarily as a way to alleviate the federal debt. The fervor of this year's dialogue was influenced by an ideological shift to the position that the federal government does not belong in the power business.

Through the leadership of the Commission and the Authority's executive director Mark Mitchell, Arizona is helping to put a new face on this challenge by making it an opportunity. Rather than react after Congress acts, the Authority has aligned itself with allies throughout the western United States to create a climate for positive change. If the PMAs are defederalized, our goal is to acquire PMA assets in order to control the destiny of public power customers.

While PMA defederalization has been a major issue in the past year, the Authority has also continued to work directly with the Bureau of Reclamation (Reclamation) and Western Area Power Administration (Western) to gain control of increasing power production and delivery costs. In addition, we are directly involved in the development of a Habitat Conservation Plan for the lower Colorado River with the goal of structuring a sound environmental program, while, at the same time, protecting power interests.

In this report, we discuss the Authority's proactive role in these issues, the possible outcome and its significance for Arizona and our customers.

Sincerely,

Arizona Power Authority

fewel M. Lewis

COMMISSION

J. S. FRANCIS, JR.

MARK S. MITCHELL

REPORT OF THE COMMISSION

Chair Jewell Lewis
Highlights Leadership
Activities

COMMITMENT

The Commission is pleased to report the Authority has taken a leadership role among public power agencies in the West to ensure the lowest electric rates possible. Largely through the initiative of executive director Mark Mitchell, who joined the Authority on January 9, 1995, we have witnessed a change of attitude among power users who formerly responded with "just say no" to any changes on the horizon, Mr. Mitchell has helped win a major victory for public power through his leadership in forging an alliance to analyze proposed changes and then to confront the challenges with a united voice.

Although it appears Congress has tabled the defederalization of the power marketing administrations until next year, we stand committed to gaining cost control of the federal assets vital to the production and delivery of Hoover power. Authority customers will benefit from stabilized electric rates. All Arizona will profit from a stable agricultural base.

The potentially devastating impact on rural economies has been a primary consideration in the Authority's decision to work to ensure cost control over PMA assets. Our focus is the economic preservation of the irrigation districts and municipal economies served by our 39 electric customers. We are committed to promoting improved irrigation methods to conserve both water and power, and to assisting our customers in planning longrange resource conservation to meet evolving needs.

MEMBERS OF THE COMMISSION

LEADERSHIP

Commissioners' Vision and Vigilance Enable the Authority to Offer Customers Reliable Power at Fair Prices. Jewell M. Lewis Chair

Dr. Lewis was appointed to the Commission in 1986. Formerly a teacher for 20 years in the Florence

and Coolidge, Arizona, school systems, she is chairperson of the board of MAC Communications, which owns KTVK Channel 3, Phoenix Magazine, KESZ Radio, and Desert Production Center in Arizona. Dr. Lewis is a member of the Arizona Perinatal Board of Trustees. the NAU Center for Excellence in Education Advisory Board, the D.O.A.R. Advisory Board, and co-chair of the **Orpheum Theatre** Renovation Foundation. James K. Henness Vice-Chair

Jim Henness has served on the Commission for 13 years and was chairman from 1984 to 1986. He was reappointed to a third term which ends in January of 2000. A cotton farmer from Casa Grande, Arizona, Mr. Henness is active in many agribusiness, environmental and community organizations. He is past president of the Agri-Business Council of Arizona, chairman of the State Agricultural

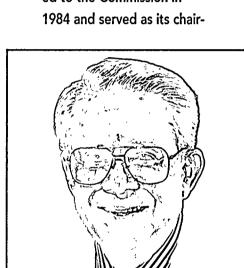

Stabilization Conservation Service Commission, and a member of the National Association of Conservation Districts, and the Arizona Cotton Growers Association. Robert P. Casillas

Bob Casillas served as chairman from February 1992 through January 1994. First appointed to the Commission in 1985, he was reappointed in 1990 for a second term. A native of Miami, Arizona, Mr. Casillas, along with his brother,

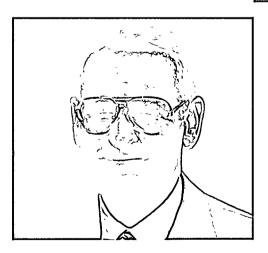

founded C.C. Foods, Inc., a tortilla manufacturing and distributing firm in Phoenix. He served as a Gila County supervisor for eight years, and was chairman three of those years. He is a former director of the Globe Lions Club and is a member of the Globe-Miami Economic Development Committee. Richard S. Walden

Appointed to the Commission in June of 1984,

man from 1988 to 1990. He is also serving a second sixvear term. Mr. Francis is chairman of the board of Valley Industries, a familyowned cotton ginning company in Glendale, Arizona, which has recently leased its westside ginning facilities to Anderson Clayton. He serves on the boards of the National Cotton Council, the **Arizona Cotton Growers** Association, and the SuPima

Association of America.

Dick Walden is serving his second consecutive six-year term which ends in 1998. He served as chairman from

1990 to 1992. Mr. Walden heads the Farmers Investment Co., a familyowned pecan and cotton growing and processing firm headquartered in Sahuarita, Arizona. He is a director of the First Interstate Bank, and chairman of the National Pecan Shellers Association. J. S. Francis, Jr.

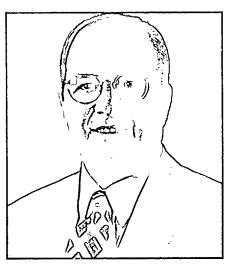

Jack Francis was appointed to the Commission in

THE AUTHORITY STAFF

Mark S. Mitchell Takes the Authority Helm and Brings Together Public Power Interests in the West

COMMUNICATION

Executive director Mark S. Mitchell, P.E., is a strong communicator who enjoys people and sincerely believes that "work should be fun." After all, when things are going well, he contends, everyone is happy. So why not strive for doing things right the first time and the satisfaction it brings.

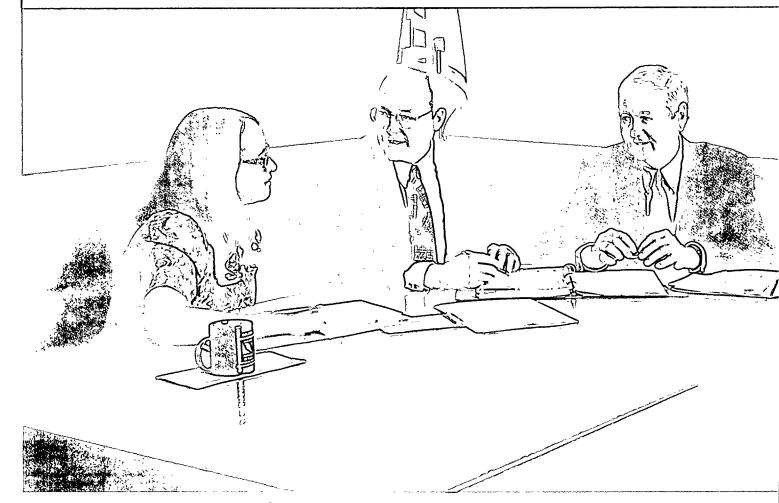

That is the philosophy and tone he brings to the Authority in the new "executive director" position.

Mitchell faced many immediate challenges upon joining the Authority team earlier this year. He immedi-

ately threw himself into the task of learning the issues and players involved in the renewed congressional bid to rid the federal government of the power marketing administrations (PMAs).

This has meant weeks of crisscrossing the U.S. and the western states to meet with other federal power customers, leaders of various public power organizations, and Washington decision makers. He, along with many others in the Southwest, is working for greater control over public power rates.

The Authority staff understands the urgent mission requiring their new leader's energy and time. They appreciate the confidence Mitchell has demonstrated in their ability to carry out their responsibilities in his absence.

Ŷ

į,

"Extremely challenging" is how Mitchell describes the effort to ensure that existing customers of the power marketing administrations maintain control of the use and cost of these vital resources. The challenge wasn't even on the horizon when the Commission con-

firmed Mitchell's appointment on December 20, 1994. Nevertheless, Mitchell's career to date has prepared him to face challenges head-on, and he quickly went into high gear to help orchestrate a united front in favor of public power acquisition of the PMAs.

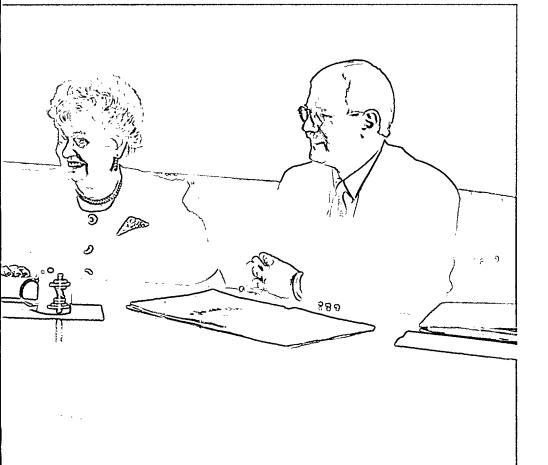

A registered professional engineer, Mitchell holds a B.S. in Electrical Engineering from New Mexico State University and a Master of Engineering Management from the University of Colorado. He served for 12 years as a

system planning engineer for the Salt River Project and two electric cooperatives prior to joining the Authority. In these positions, he worked with other organizations on the development of transmission projects and the administration of transmission and resource agreements.

Significantly, Mitchell helped negotiate the bylaws for the Southwest Regional Transmission Association (SWRTA) and the Western Regional Transmission Association (WRTA). He has detailed knowledge of Title 7 of the Energy Policy Act of 1992 and FERC policies and activities related to the Act.

A native of New
Mexico, Mitchell is active in
community affairs in
Gilbert, Arizona, where he
lives with his wife Mary and
their children Melissa and
Matthew.

THE AUTHORITY STAFF

New Tools and Training
Revitalize Essential Duties

AUTOMATION

By bringing a fresh, new outlook to the Authority, executive director Mark Mitchell complements two enduring strengths of the Authority staff: stability and hard work.

Excluding the new director and Authority attorney James Bartlett, who has served the agency more than 25 years, the average tenure of the seven Authority staff members is 11 years. This fact speaks untold stories about dedication, loyalty, experience and know-how.

Despite its limited staff, the Authority carries a heavy responsibility for scheduling and accounting for the sales of electric power, which, in the last fiscal year, produced revenues of nearly \$18 million.

Only five years ago, the Authority operated on two computers. Payroll and accounts payable were calculated and recorded manually as were most budgeting activities. Monthly

Left to right: Theodore Moss, Utilities Consultant Supervisor; Donald Esgar, Utilities Con Attorney; Rita Gallant, Authority Secretary; Frank Bonfili, Assistant Administrator, Financ

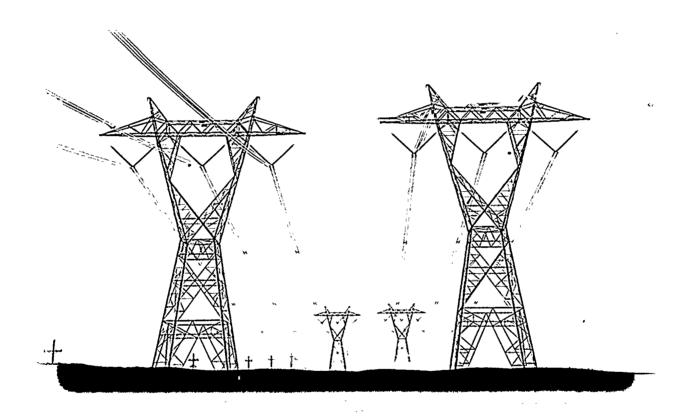

billing for more than three dozen power customers was a staggering undertaking before automation. The Authority began catching up quickly in the late 1980s. Today every staff member has a computer.

And now, as change continues to accelerate, how does the Authority intend to keep up? More of the same?

Not exactly the same, but definitely more. More responsibility, more change, more output. But according to Mitchell, "improved productivity through the implementation of new tools, techniques and teamwork will allow us to meet the challenges."

Modernized tools and

ARIZONA POWER AUTHORITY 37TH ANNUAL REPORT 1994-95

A NEW HORIZON FOR PUBLIC POWER

9601190170 951231 PDR ADDCK 05000528 I PDR Mood

MISSION

- To be a leader in managing resources in a safe and environmentally prudent manner
- To provide active representation on behalf of the state of Arizona at federal, state and local forums on issues that impact the public power community as a whole and issues that specifically involve Arizona and the Authority's power resources
- To serve as an information resource for its customers on topics that impact the customers' electric resources and utilization of those electric resources
- To maintain regular communications with its customers so that customers are aware of current Authority activities and upcoming issues of importance
- To pursue generation or transmission projects that are within the Authority's legislative mandate when these projects are in the best interests of the state of Arizona
- To ensure that customer billings are prepared accurately and rendered on a timely basis

training, plus greater understanding of the broad issues facing the industry, will position Authority staff as well-versed team members valued for specialized knowledge and flexibility.

Rather than continue as isolated divisions, staff will begin learning new skills through cross training and the introduction of new

technology. Thus, Mitchell said, he expects to see greater job satisfaction, and value added on behalf of both customers and employees.

"My job is more interesting now because computer software allows us to track so many more trends," confided assistant administrator Frank Bonfili, who joined the Authority in 1986. "I can handle more and plan better for the future."

The Authority is implementing a program to upgrade office equipment, computers, and computer software.

Congress Postpones

Decision on Future Control
of PMA Assets

OPPORTUNITY

Expectations and emotions ran high this year as Congress considered the sale of the federal power system. During the past decade, Congress has proposed several times to sell federal power facilities. Previously, its strategy had been to reduce the federal deficit by selling federal assets. This year, however, saw an ideological shift. Rather than basing their decision on purely economic arguments, members of Congress also focused on reducing the size of the government. Some argued that the federal government does not belong in the power business.

Closure on the power marketing administration (PMA) issue was anticipated as part of the federal budget reconciliation process.

However, although the outcome is uncertain, it appears that any action will be postponed for another year.

Public power entities in the desert Southwest and elsewhere saw the proposed sale as an opportunity to gain better control of the costs of the generation and transmission on which they rely. Working with other public power entities, the Authority helped draft legislative language that was broad enough to allow all existing federal power customers to purchase or lease the generation and transmission assets of the PMAs.

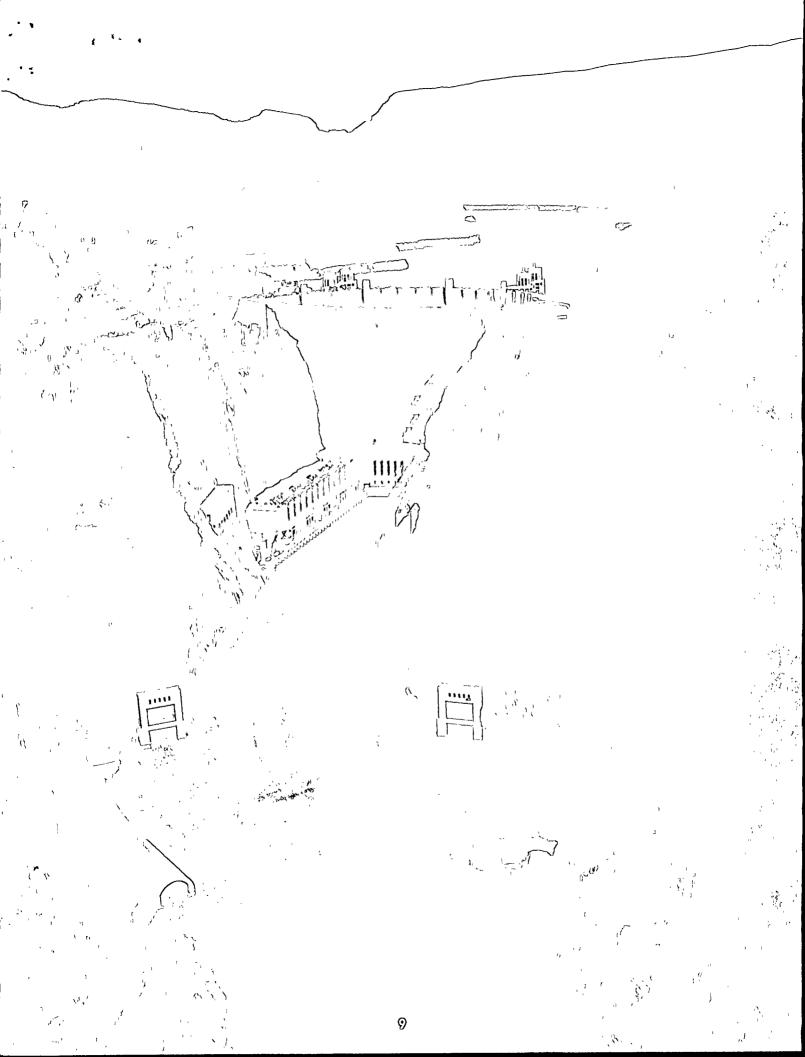

The issues involved with defederalization of the PMAs are complex and will require a concerted effort for successful conversion to customer control. The Authority will continue to work to ensure any legislation enacted transfers PMA control to existing customers in the region.

Says executive director Mark Mitchell of the postponement: "We've been given time to further consider our options and refine our proposal. We will be prepared when this issue returns."

The Authority and its customers depend on federal power delivered over federal transmission facilities. Cost-based rates provide electricity at prices which help Arizona agriculture remain competitive and aid economic development in small communities. It is vital that cost control of these assets remain with the existing customers who rely on and have paid for these facilities.

The road ahead is anything but smooth, but the consequences of failure to maintain control should propel these federal power customers and like-minded decision makers to victory.

The challenges and their outcome will do much to carve the new visage of public power.

Habitat Conservation Plan Provides Hope for Achieving Dual Goals

ENVIRONMENT

Learning to live with environmental and economic imperatives—saving a river and its original inhabitants while preserving the investment represented by power facilities on the river—requires a commitment to cooperation.

Continued economical operation of Hoover Dam and other electric generating facilities on the Colorado River hinges on the reasonable implementation of the 1973 **Endangered Species Act** (ESA) in the Upper Basin. Federal agencies have announced proposals for two alterations in the flow of the Colorado River into the Lower Basin that could significantly impact operations at Glen Canyon Dam. Both proposals are, in one way or another, measures designed to comply with the Grand Canyon Protection Act.

The first proposal deals with the maximum allowable water releases at Glen Canyon. The second proposes a "spring spike" release down river from

Glen Canyon in an effort to use sediment to rebuild beaches in the Grand Canyon.

Currently, the maximum allowable flow from Glen Canyon is 20,000 cubic feet/second, down from the 31,000 cfs allowed prior

U.S. Department of Interior had not yet rendered a decision.

The Authority questions the U.S. Geological Survey proposal for a spring spike of 45,000 cfs because it would exceed the Glen Canyon power plant capaci-

to 1990. Of the six alternatives proposed in the final Environmental Impact Statement, the power users prefer the one increasing the flows to an allowable maximum of 25,000 cfs.

At 25,000 cfs, the power users will be able to realize a greater value from their investment in the Glen Canyon generating plant, which was formerly operated as a peaking facility. At the time of publication, the

ty by 15,000 cfs, thus allowing water to flow down river unused. This experimental approach is intended to repair beaches by forcing onto them the sediment abundant in the river following the snow melt.

The U.S. Fish and
Wildlife Service (USFWS)
has designated "critical
habitat" areas for four
endangered big fish in the
Colorado River. The critical
habitat designation encom-

passes nearly 2,000 river miles. The Bureau of Reclamation is studying biological effects that power facility operations have on two of these native fish in the Lower Colorado. Based on these findings, scientists will determine what can be done to mitigate impacts. The Authority is concerned about how the outcome would affect the use of Hoover Dam as a peaking source.

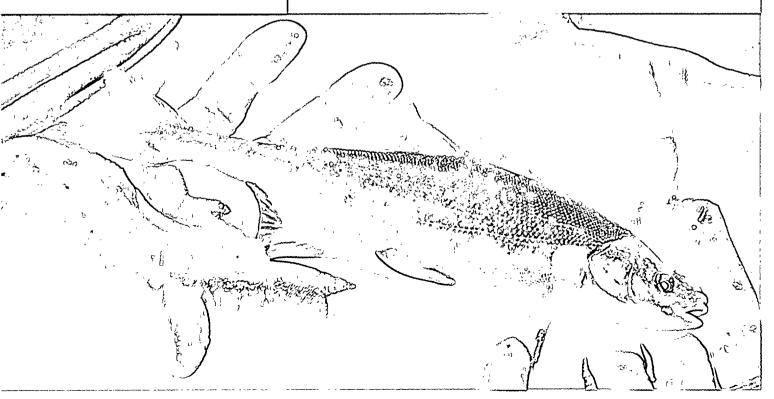

The Authority has taken a proactive stance by participating with Nevada, California and local Indian tribes in the development of a Habitat Conservation Plan. Through a memorandum of agreement with the USFWS, the group has three years to develop a

plan that will mitigate today's problems and make recommendations to handle future problems.

One option might be to build hatcheries to spawn the endangered fish. While difficult to fund as a federal expense, such a solution might be feasible when financed by water and power and recreational users, said Authority legal consultant Tom Hine, who serves on a Habitat Conservation work group.

Although restoring an endangered species still is more art than science, the ESA has been effective. Since the act took effect in 1973, 912 species have been listed as threatened or endangered. About 40 percent of the 912 U.S. species on the list (422 animals, 490 plants) have either stabilized or begun to improve. Another 30 percent continue to decline but more slowly than before. Thirteen species have been removed, of which seven are now extinct and six have been saved.

The Razorback Sucker, Bonytail Chub, Colorado Squawfish, Humpback Chub—and potentially 80 other plant and wildlife species in the Lower Basin being considered as endangered—may too be saved through such creative initiatives as the Habitat Conservation Plan.

Authority Legal Counsel
James Bartlett Discusses
Dramatic Changes in the
Management of Hoover
Powerplant Operations and
Maintenance

AGREEMENT

Q: What is the Implementation Agreement?

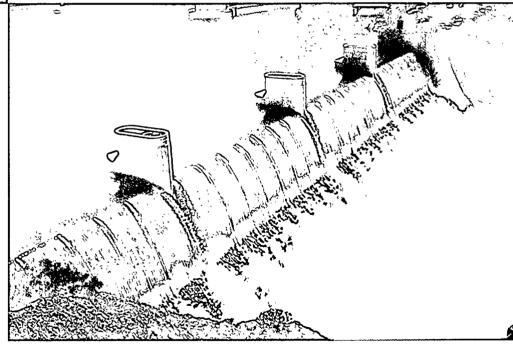

Bartlett: It's a forum to break down communication barriers. In recent years, a number of controversies have arisen between the Western Area Power Administration (Western), the Bureau of Reclamation (Reclamation) and the Hoover Contractors with respect to a variety of Hoover issues. The Boulder Canyon Project (Hoover) Implementation Agreement "implements" recommendations for resolving the 11 controversial issues identified in the June 22, 1993, "Report of the Negotiating Group." The Implementation Agreement serves as a practical vehicle for resolving conflicts between Hoover Contractors and the federal agencies, without costly and time-consuming administrative proceedings and litigation.

Q: How does it work?

Bartlett: Perhaps the single most important achievement of the Agreement is the establishment of an Engineering and Oversight Committee (E&OC) to act in conjunction with a Coordinating Committee. These committees provide for an exchange of facts

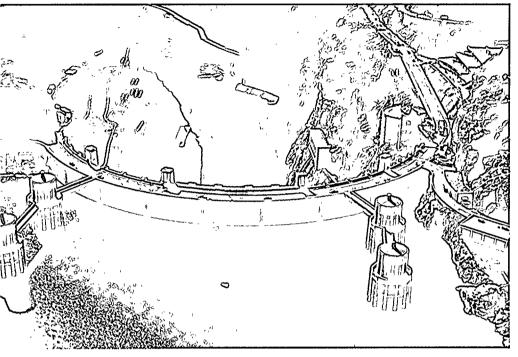

capacity and energy
charges remain the lowest
possible consistent with
sound business principles.
The committees represent
a significant departure from
previous dealings among
the parties. Before, discussions were often marred by
unwillingness or inability to
cooperate and exchange
information which, in turn,
bred unhappiness and distrust.

Q: Who is involved?
Bartlett: Prior to 1987, the
City of Los Angeles
Department of Water and
Power and the Southern

and information and ensure that the Boulder Canyon Project will be operated, maintained, marketed and kept in good repair so that California Edison Company operated and maintained the Hoover powerplant under an agreement with the United States. When

the original 50-year contracts for the sale of hydroelectric power produced at sibility for water releases and the physical operations of Hoover Dam.

the Boulder Canyon Project expired in 1987, new 30year contracts were signed by Western and 15 purchasers, including the Arizona Power Authority. Pursuant to a change in the federal law. Western took over the operation of the generating facility and also became the marketing agent for power produced at Hoover and various other federal power projects. Reclamation continued to carry out its responQ: What are the issues? Bartlett: Some of the major concerns are identifying and controlling the costs of replacements, identifying the costs and benefits shared by various federal power projects, and implementing the agreedon methodology for establishing future charges for Hoover power. The Agreement also attempts to soften the financial impact of the Hoover Visitor's Facility on Hoover ratepayers, who alone must bear costs that have ballooned from an original \$32 million to more than \$120 million, including interest

during construction. The Agreement recommends several avenues for raising additional funds to defray the cost overrun.

Q: What are the expected results?

Bartlett: As I stated earlier. the E&OC and **Coordinating Committee** were formed to exchange information and resolve disputes. Although representatives from Western. Reclamation and the Contractors are still trying to attain the results intended by the Agreement, all parties believe they can resolve various technical and administrative difficulties within the next year, to the mutual advantage of all participants.

Q: Where do we go from here?

Bartlett: It is unlikely that all problems will disappear as a result of the Agreement, but now a cooperative forum has been established with adequate assurances that such problems can be resolved in a timely and amicable way. The Agreement is truly a milestone on the road to more efficient and costeffective generation of hydropower at the Boulder Canyon Project.

•6 ×

Access to Nation's Electric Transmission System Promises Lower-Cost Electricity

EXPANSION

The Authority's energy resource options are expanding as a result of the "open access" to electric transmission mandated by the Federal Energy Regulatory Commission (FERC).

When the U.S. Congress passed the Energy Policy Act of 1992, it, among other things, directed FERC to develop a means of providing open access to the electric transmission systems to all potential users.

Currently, most public power entities rely on major transmitting utilities for access to the generation markets. Nondiscriminatory access to the nation's electric transmission system will allow formerly captive utilities the opportunity to tap into lower cost electricity supplies. The Authority, its customers, and other similar entities soon will be able to operate more independently and competitively.

As might be expected, developing a process to fairly provide open access is not simple. There are significant differences in the way transmission systems across the country are developed and operated. The Authority has taken a leadership position by participating in the creation of regional transmission groups to work through these complex issues. The Authority is an active member of the Southwest Regional Transmission Association (SWRTA), approved by FERC in October of 1995.

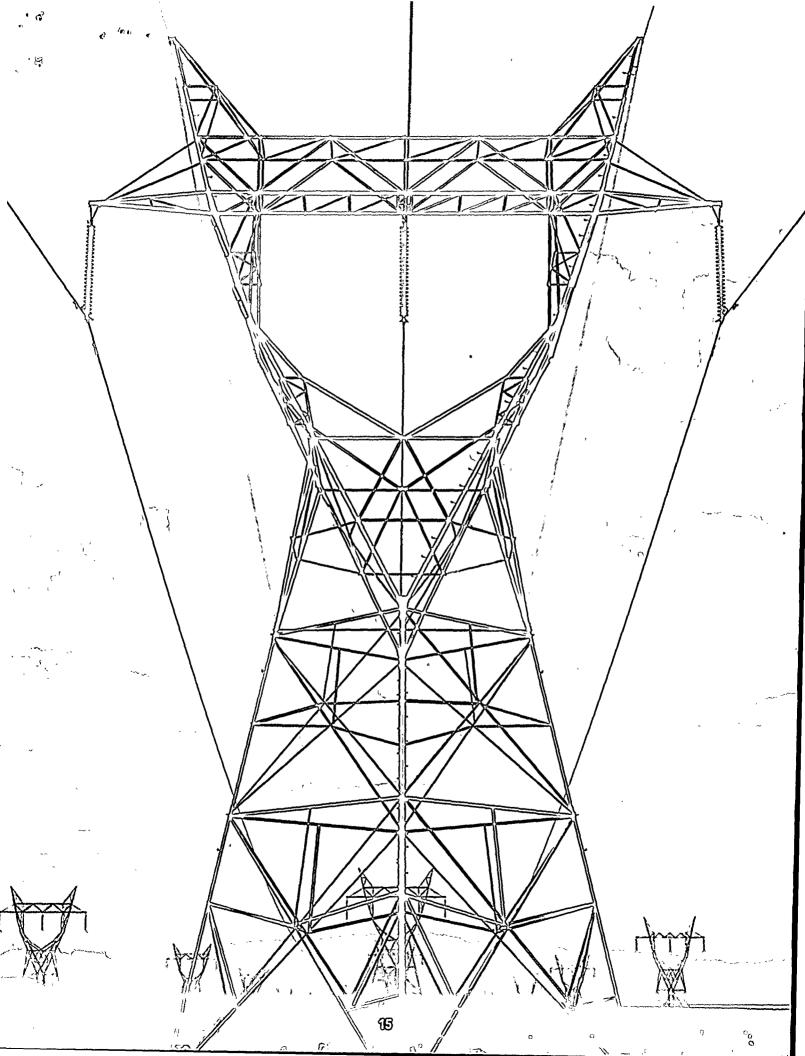

Earlier in 1995, FERC issued a "notice of proposed rulemaking" to serve as a framework for how transmission owners must offer access to their systems. Owners are required to offer prices and terms comparable to their own usage. The rulemaking document describes the comparable rate tariffs to be filed by transmission owning utilities. It also discusses a method for making system information known to all potential users by means of electronic bulletin boards or real-time information networks.

FERC has requested the industry to establish standards for "what" information should be posted on these electronic systems and "how" the computer systems should be structured.

The Authority is one of 25 industry representatives working to establish standards for what should be posted. The Authority and its customers, to become astute users of expanded transmission options, need to understand the alternatives for accessing the resource markets. Authority executive director Mark Mitchell, who played a key role in the development of SWRTA, feels strongly that by helping to forge the access mechanisms, the Authority will be in a better position to make beneficial use of the system.

Implementation of nondiscriminatory mechanisms for transmission access will radically alter historical electric utility relationships. While use of the transmission system will become more regulated, there will be greater competition among generation suppliers. At the same time, nontraditional suppliers such as independent power producers and power marketers will play more significant roles.

The exciting news is that this increased competition should translate into savings for public power users.

INDEPENDENT AUDITORS' REPORT

Arizona Power Authority Commission

We have audited the accompanying combined financial statements of Arizona Power Authority (an Agency of the State of Arizona) ("APA") and the separate financial statements of the APA General Fund and the Hoover Uprating Fund of APA as of June 30, 1995 and 1994 and for the years then ended, listed in the Table of Contents. These financial statements are the responsibility of the management of APA. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with generally accepted auditing standards. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such financial statements present fairly, in all material respects, the combined financial position of APA and the financial positions of the APA General Fund and the Hoover Uprating Fund of APA at June 30, 1995 and 1994 and the results of their operations and their cash flows for the years then ended in conformity with generally accepted accounting principles.

Our audits were conducted for the purpose of forming an opinion on the basic financial statements taken as a whole. The supplemental schedule listed in the Table of Contents, which is also the responsibility of the management of APA, is presented for purposes of additional analysis and is not a required part of the basic financial statements of APA. Such supplemental schedule has been subjected to the auditing procedures applied in our audit of the basic financial statements and, in our opinion, is fairly stated in all material respects when considered in relation to the basic financial statements taken as a whole.

DELOITTE & TOUCHE LLP.

Phoenix, Arizona July 28, 1995

NOTÉS TO COMBINED FINANCIAL STATEMENTS YEARS ENDED JUNE 30, 1995 AND 1994

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

System of Accounting - The accounting records of the Arizona Power Authority ("APA") are maintained in accordance with applicable provisions of the Uniform System of Accounts prescribed by the Federal Energy Regulatory Commission ("FERC").

Property and Depreciation - Property is stated at original cost. The costs of property additions and replacements are capitalized. Replacements of minor items of property are charged to expense as incurred. Costs of property retired are eliminated from plant accounts, and such costs plus removal expenses less salvage are charged to accumulated depreciation.

Depreciation is provided on the straight-line composite method based on the estimated useful lives of the property items, which range from 5 to 44 years.

Advances for Hoover Uprating Project - Proceeds from bonds payable are advanced by APA for uprating the Hoover Power Plant and are recorded as advances. Such advances, including debt issue costs, plus net interest expense incurred by APA are reimbursed in the form of credits on the monthly power bills rendered to APA by the Western Area Power Administration of the Department of Energy ("Western"). The credits are issued over the 30 year life of the bonds. Substantially, all net interest expense on the bonds is charged to the uprating project as amounts to be recovered from future credits.

Reclassifications - Certain amounts in the 1994 financial statements have been reclassified to conform to the 1995 presentation.

2. FUND ACCOUNTING

Hoover Uprating Fund - The Hoover Power Plant Act of 1984 ("Hoover Act") authorized the United States Government to increase the capacity of, i.e., "uprate", existing generating equipment at the Hoover Dam Power Plant ("Uprating Project"). Instead of appropriating further federal funds for the Uprating Project, Congress implemented an advancement of funds procedure whereby prospective non-federal purchasers of the uprated Hoover capacity and associated energy contribute to the financing of the Uprating Project. APA financed a portion of the total Uprating Project by issuing bonds (Note 7).

The Hoover Uprating Fund accounts for advances by APA in connection with the Uprating Project. Effective June 1, 1987, APA executed new power contracts with Western and APA customers which expire in 2017. The revenues and expenditures applicable to the sale and transmission of power and energy received by APA from Western under these contracts are accounted for in the Hoover Uprating Fund.

APA General Fund - APA operations other than those applicable to the Hoover Uprating Fund are accounted for in the APA General Fund. The purchase of steam power and the sale and transmission of such power to APA's customers comprise the majority of this fund.

3. PROPERTY, PLANT AND EQUIPMENT.

Property, plant and equipment of the APA General Fund at June 30 are as follows:

		1995	1994
Transmission and distribution plant General plant		\$ 506,418 <u>667,560</u> .	\$ 486,663 671,678
Total Less accumulated depreciation	1	1,173,978 <u>785,888</u>	1,158,341 <u>717,902</u>
Property, plant and equipment - net	**	\$ 388,090	<u>\$ 440,439</u>

The transmission and distribution plant is comprised of a substation and related equipment. Purchased power is delivered over transmission facilities owned by Western.

4. CASH

All cash balances of APA are maintained by State of Arizona Treasurer for pooled investment purposes. Statutes require the State Treasurer to invest these pooled funds in obligations of the United States Government. All investments are carried at cost.

5. ADVANCES FOR HOOVER UPRATING PROJECT

Advances for the Hoover Uprating Project were reimbursed by Western through credits on APA's power bills in the amounts of \$5,118,675 and \$4,699,814 for the years ended June 30, 1995 and 1994, respectively. During the years ended June 30, 1995 and 1994, interest expense on the bonds issued to finance the Uprating Project exceeded interest revenue and gain on sale of investments by \$3,020,457 and \$2,921,861, respectively. These amounts were charged to the cost of the Project.

6. INVESTMENTS

As of June 30, 1995 and 1994, investments are insured or collateralized with securities held by APA's agent in APA's name. Investments are carried at cost, which approximates fair value at June 30, except United States government bonds as of June 30, 1995. Due to an increase in interest rates, government bond market values have declined by \$494,000. APA intends to hold such bonds until maturity.

Investments as of June 30 are as follows:

•		*		- -		1995	1994 ,
United States gövernme	nt securities				×	\$ 10,100,653	\$ 7,622,010
Repurchase agreements		. •				7,445,535	8,716,313 .
Commercial paper	* 1		-			* n	1,512,781 ب
Money market	•		•		-	<u>542,809</u>	534,014
Total investments	*	• •	•	* *	•	\$ 18,088,997	\$ 18,385,118

On December 1, 1993, APA entered into a master repurchase agreement with Morgan Stanley & Co., Inc. ("Morgan Stanley"), wherein APA agreed to effect a series of repurchase transactions with Morgan Stanley in permitted investments. Permitted investments are defined as United States Treasury Securities, Government National Mortgage Association Securities, Federal Home Loan Mortgage Corporation Securities, Federal Housing Authority Securities and Student Loan Marketing Association Sécurities. The securities are held by Bank One of Arizona, N.A., as Trustee, for APA. If at any time the aggregate market value of all purchased securities is less that APA's aggregate margin amount (calculated using a percentage of 105%), then APA may require Morgan Stanley to transfer to APA cash or additional securities, at Morgan Stanley's option, so that the cash and aggregate purchased securities will equal or exceed APA's aggregate margin amount.

7. BONDS PAYABLE

In prior years, APA defeased certain general obligation and other bonds by placing the proceeds of new bonds in an irrevocable trust to provide for all future debt service payments on the old bonds. Accordingly, the trust account assets and the liability for the defeased bonds are not included in APA's financial statements. On June 30, 1995, \$89,820,000 of bonds outstanding are considered defeased.

The new bonds bear interest ranging from 2.8% to 5.6% and are due serially from 1995 through 2017 as follows:

1995 1996		•	•			1,190,000 1,280,000
1997	í	•	•			1,380,000
1998 1999	• • • • • • • • • • • • • • • • • • • •	a.	' ;	•	•	1,495,000 1,625,000
Thereafter		· *	•	,	- 4	73,325,000
Total Gurrent por	tion of bonds payable	·			,	80,295,000 1.190,000
Long-term r	portion of bonds payable	G - 1		**		79,105,000

8. RETAINED EARNINGS

Allocations of retained earnings for specified purposes are authorized by the Arizona Power Authority Commission (the "Commission"), APA's governing board, under provisions of the Arizona Power Authority Act of 1944, as amended. The general reserves shown on the accompanying balance sheets are comprised of the following at June 30:

APA General Fund	F	٠٠	1995	1994
Resource Development Operations fund Power contracts System improvement and repairs		•	\$ 3,500,000 200,000 100,000 200,000	\$ 3,500,000 200,000 100,000 200,000
Total	, k	•	\$ 4,000,000	\$ 4,000,000

9. RETIREMENT AND PENSION PLANS

All APA full-time employees are required to participate in the Arizona State Retirement Plan (the "Plan"), a multiple-employer, cost-sharing pension plan administered by the Arizona State Retirement System (the "ASRS"). The payroll for employees covered by the Plan for the year ended June 30, 1995 and 1994 was \$275,233 and \$309,895, respectively; APA's total payroll was \$280,543 and \$313,015, respectively.

ASRS provides for retirement, disability, death and survivor benefits. Retirement benefits are calculated on the basis of age, final average salary and service credit. Members are eligible for retirement benefits on the first day of the calendar month following: 1) the attainment of age 65; 2) the attainment of age 62 and ten years of credited service; or 3) the date when age plus total credited service equals 80. The benefit is based on 2% of final average salary multiplied by the years of service credit. Final average salary is defined as the period of 36 consecutive months during which a participant receives the highest compensation within the last 120 months of service during which the employee made retirement contributions as required by law. The compensation does not include vacation or annual leave, sick leave, compensatory time or any other form of terminátion pay. Persons who have reached age 50 with at least five years of total credited service may take an early retirement which entitles them to a reduced retirement benefit. Retirement benefits vest after five years of service.

Effective July 1, 1988, members of ASRS became eligible for a disability benefit in the event they become unable to perform their work. A participant continues to earn credit of up to a total of 25 years of service during the period of disability.

Upon termination of employment, a member may withdraw contributions made to ASRS. The acceptance of a refund cancels the individual's rights and benefits in ASRS. Employers' contributions to the System are not refunded.

Covered employees were required by State statute to contribute 3.75% of their salary to the Plan during fiscal year 1994-1995 and 3.14% of their salary during fiscal year 1993-1994. APA is required to match their contribution. Total contributions made by APA and its covered employees were \$10,188 for each in 1995 and \$9,730 for each in 1994.

The pension benefit obligation is a standardized disclosure measure of the present value, of pension benefits, adjusted for the effects of projected salary increases estimated to be payable in the future as a result of employee service to date. The measure, which is the actuarial present value of credited projected benefits, is intended to help users assess the public employees retirement system's funding status on a going-concern basis, assess progress made inaccumulating sufficient assets to pay benefits when due, and make comparisons among such systems. The Plan does not make separate measurements of assets and the pension benefit obligation for individual employers. The pension benefit obligations at June 30, 1994, for the Plan as a whole, determined through an actuarial valuation performed as of that date, was \$9,629,857,553. The Plan's net assets available for benefits on that date (valued at market) were \$10,768,681,593. APA's 1994 contribution represented less than one percent of total contributions required of all participating entities, which were \$124,763,806 each for employers and employees in 1994 (1995 information not available).

Ten year historical trend information showing the Plan's progress in accumulating sufficient assets to pay benefits when due is presented in ASRS' June 30, 1994, comprehensive annual financial report.

10. ADDITIONAL BENEFITS

In addition to the pension benefits described, ASRS offers health care benefits to retired and disabled members that are no longer eligible for health care benefits through their former member employer's group health plan. This program is administered in accordance with ARS 38-781.03. Retired is defined as actively receiving an annuity benefit and disabled is defined as receiving a long-term disability ("LTD") benefit through the LTD program administered by ASRS. The ASRS provides the following monthly premium benefits:

· ·		Member	140.1 D	1		' wrd b'	
Years of	Percent of	Only ' Not	Not	<u>pendént(s)</u>	Member Only	With Depe	-
Credited Service	Premium Benefit	Medicare - Eligible	Medicare Eligible	Medicare Eligible	Medicare Eligible	Medicare Eligible	Medicare Eligible
5.0 - 5.9	50%	\$ 47.50	\$ 87.50	\$ 72.50	\$ 32.50	\$ 72,50	\$ 57.50
6.0`- 6.9	60%	> 57.00	- 105.00	87.00	⁻ 39.00	87.00	69.00
7.0 - 7.9	, 70%	66.50	122.50	101.50	45.50 ,	101.50	80.50
8.0 - 8.9	80%	76.00	140.00	116.0Ó	52.00	116.00	92.00 \
9.0 - 9.9	90%	·85.50	157.50	130.50	58.50	130.50	103.50
10.0+	100%	95.00	175.00	145.00	65.00	145.00	115.00

The Arizona State Retirement System reimbursed approximately \$26,100,000 towards the cost of group health insurance coverage for the year. This figure represents an increase of 2,82% over the previous year.

11. COMMITMENTS AND CONTINGENCIES

In 1990, Western refunded to the Authority approximately \$4.6 million of over-collections related to the pre-1987 Hoover Electric Service Contracts. The Authority thereafter made a pro rata refund of this amount to its own pre-1987 customers. Subsequent to the refunds, the Los Angeles Department of Water and Power ("LADWP") and Southern California Edison Company ("Edison") have advised Western of their position that the refunds were incorrectly calculated and that they should have received a larger allocation of the total amount refunded. Based upon its percentage of the overall refund, the Authority might be exposed to a claim of approximately \$1,050,000. In the opinion of the Authority and its legal counsel, the refund calculations were entirely appropriate in the first instance and the Authority's risk of exposure is minimal.
