

DEC 07 1982

Docket No. 50-316

LICENSEE: Indiana and Michigan Electric Company

FACILITY: D. C. Cook Unit No. 2

SUBJECT: MEETING SUMMARY - CYCLE 4 RELOAD

*"see repts"*

The licensee and Exxon met with the staff on December 2, 1982 to discuss the D. C. Cook Unit No. 2 fuel reload for cycle 4. The attendance list is included as Enclosure 1.

During the previous meeting on the same subject on November 3, 1982, a number of questions were provided to the licensee. This meeting on December 2 was to discuss the licensee's response to the questions. The licensee provided written responses which are included as Enclosure 2. Attachments 1 and 2 of Enclosure 2 are the Technical Specifications changes for the reload review. Attachments 3 thru 5 of Enclosure 2 are responses to staffs questions. Attachment 6 is the D. C. Cook procedures for detailed sampling of reactor coolant for fuel failures and was provided also in response to a staff question.

As a result of the meeting, the licensee will document their rational for the review performed for the reload, the reasoning for selecting certain accident sequences for details analysis, the basis for calculated results being conservative or non-conservative, and an estimate of the fractional part of 10 CFR Part 100 doses resulting from the sequences analyzed. The licensee will also address the 3.5% uncertainty on RCS flow and the effects this uncertainty will have on the various calculations performed.

The remaining material to be docketed and any additional responses are to be completed before December 22, 1982. The plant startup schedule is currently sometime about January 19, 1982.
