The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author details the various methods used to collect and analyze the data. This includes both manual and automated processes. The goal is to ensure that the information is both reliable and up-to-date.

The third part of the document focuses on the results of the analysis. It shows that there has been a significant increase in sales over the period covered. This is attributed to several factors, including improved marketing strategies and better customer service.

The fourth section discusses the challenges faced during the process. One major issue was the lack of consistent data from some of the smaller suppliers. This was addressed by implementing a new system for tracking orders and deliveries.

Another challenge was the high volume of data generated. To manage this, the team decided to use data visualization tools to identify trends and anomalies more easily.

Finally, the document concludes with a summary of the findings and recommendations for future work. It suggests that continued investment in data analysis and reporting will be crucial for long-term success.

The following table provides a detailed breakdown of the sales data for each quarter. It shows the total revenue, the number of units sold, and the average price per unit.

Quarter	Total Revenue	Units Sold	Average Price
Q1	\$120,000	10,000	\$12.00
Q2	\$150,000	12,500	\$12.00
Q3	\$180,000	15,000	\$12.00
Q4	\$210,000	17,500	\$12.00

The data clearly shows a steady upward trend in sales throughout the year. This is a positive indicator for the company's performance.

ADDITIONAL INFORMATION CONCERNING THE SAFETY  
PARAMETER DISPLAY SYSTEM (SPDS)

Mr. Harold R. Denton, Director  
Office of Nuclear Reactor Regulation  
U. S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Mr. Denton:

This letter responds to your staff's December 24, 1984 request for additional information concerning the D. C. Cook Safety Parameter Display System (SPDS).

As we recently informed your staff, much of the requested information requires input from Westinghouse Electric Co., from whom we purchased our SPDS. Westinghouse has advised us that they wish to address the issues with a D. C. Cook Plant Specific topical report. Westinghouse is scheduled to complete and deliver this report to us by early March. Once we receive the information from Westinghouse, it will take us 2-3 weeks to review and process the information for submittal to you.

Regarding your request for information concerning the schedule for full implementation of the SPDS, we would appreciate deferring the schedule until all studies and evaluations have been completed. In our letter AEP:NRC:0773D, dated January 30, 1984, we committed to submit a status report on the SPDS in April, 1985. The schedule for full implementation of the SPDS will be a part of that report.

This document has been prepared following Corporate procedures which incorporate a reasonable set of controls to insure its accuracy and completeness prior to signature by the undersigned.

Very truly yours

*M. P. Alexich*
