Donald C. Cook Nuclear Plant Unit 2
Docket No. 50-316
License No. DPR-74
SUPPLEMENTAL REQUEST FOR AEP:NRC:0931B

U.S. Nuclear Regulatory Commission
Attn: Document Control Desk
Washington, D.C. 20555

Attn: T. E. Murley

March 2, 1988

Dear Dr. Murley:

This letter constitutes a request to recover part of the Bases to the Technical Specifications (T/Ss) for the Donald C. Cook Nuclear Plant Unit 2 which was inadvertently deleted. In our letter AEP:NRC:0931, dated August 19, 1986, we submitted a T/S change request which included Bases page B 3/4 7-6 for Unit 2. During preparation of that submittal, the portion of the second paragraph of Section 3/4.7.9 appearing at the bottom of page B 3/4 7-6 was inadvertently deleted. The deleted portion addressed the situation in which a low pressure CO₂ system is isolated for personnel protection to permit entry² for routine tours, maintenance, construction, or surveillance testing. The first part of the deleted paragraph repeats the requirements specified under Action a of T/S 3.7.9.3; and the second part outlines qualifications for a person serving on a roving fire watch patrol. The Cook Nuclear Plant has a plant procedure which ensures that appropriate qualifications are maintained by personnel serving on a roving fire watch patrol by requiring that these personnel receive periodic fire watch training. Since no procedural changes were made as a result of the deleted paragraph, the deletion has not impacted our compliance with the T/S Bases.

Documents impacted by this deleted portion include the SER for Amendment 91 to the Unit 2 T/Ss (dated April 7, 1987) and AEP:NRC:0931B (dated July 27, 1987) which is still pending with the NRC.

To resolve this issue we are requesting that approval be granted to replace the current Bases page (B 3/4 7-6) for Unit 2 with the revised Bases page included in the attachment to this letter. The revised page includes the changes submitted in AEP:NRC:0931B.

-2-

AEP:NRC:0931D

We believe that this request will not result in (1) a significant change in the types of effluents or a significant increase in the amounts of any effluent that may be released offsite, or (2) a significant increase in individual or cumulative occupational radiation exposure.

An application fee was paid for the proposed amendment submitted in AEP:NRC:0931B; therefore, we have not included an application fee for this letter.

This document has been prepared following Corporate procedures which incorporate a reasonable set of controls to ensure its accuracy and completeness prior to signature by the undersigned.

Sincerely,

M. P. Alexich
Vice President
