

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

OCTOBER 18 1979

Docket Nos.: 50-315  
50-316

LICENSEE: Indiana and Michigan Power Company  
FACILITY: Donald C. Cook Nuclear Station, Unit Nos. 1 & 2  
SUBJECT: MEETING SUMMARY - EMERGENCY PREPAREDNESS PLANS

On September 19, 1979, the licensee met with the review team to discuss the new NRC acceptance criteria for updating the emergency preparedness plans. On September 20, 1979, the licensee, officials of the State of Michigan, and local officials of the surrounding area to the Donald C. Cook site met with the review team to discuss the emergency plans specifically as it applied to the state and local plans. The list of attendees for each day is enclosed.

The principal document discussed with the licensee, state and local officials was the September 7, 1979 memorandum from Jim Miller to the Emergency Plans Staff on the subject of "Emergency Planning Review Guideline Number One - Revision One - Emergency Planning Acceptance Criteria for Licensed Nuclear Power Plants." Other documents used as references included the following:

- NUREG-0396; EPA 520/1-78-016 "Planning Basis for the Development of State and Local Government Radiological Emergency Response Plans in Support of Light Water Nuclear Power Plants," December 1978.
- NUREG-0578 "TMI-2 Lessons Learned Task Force Status Report and Short-Term Recommendations," July 1979.
- Draft - "Basis For Emergency Action Levels for Nuclear Power Facilities," (For Interim Use and Comment), September 13, 1979.
- SECY 79-450, H. Denton to NRC Commissioners, "Action Plan for Promptly Improving Emergency Preparedness," July 23, 1979.
- NRC Regulatory Guide 1.101 "Emergency Planning for Nuclear Power Plants," March 1977.

GD

OCTOBER 13 1979

From the discussions with the Licensee and officials of the state and local governments, the following open items were noted:

1. The role of the NRC and other Federal agencies needs to be clearly delineated and understood by the agencies. This role will be part of the plans but needs definition by the Federal agencies.
2. State laws in Michigan prescribe an emergency classification scheme. It is not clear that the NRR emergency classification scheme for the licensee is compatible with the state laws. The licensee will advise the NRC if this is still an open item.
3. Acceptance criteria for systems to notify people need to be provided to the licensee now in order to meet the January 1980 submitted date.
4. The State representatives see Emergency Action Levels for Field Monitoring teams as procedural items rather than planning items. NRC wants these in the State plans. The State requested a clarification of this requirement.
5. The five week schedule for complete revision and to include the State and local plans as appendices is questioned. The State provides guidance and direction to the local governments for their plan development.

These open items are to receive NRC attention and the parties involved will be further advised.

Dave Wigginton, Project Manager  
Operating Reactors Branch #1  
Division of Operating Reactors
