Docket No. 50-316

Indiana Michigan Power Company
ATTN: Mr. Milton P. Alexich
Vice President
Nuclear Operations Division
1 Riverside Plaza
Columbus, OH 43216

Gentlemen:

This refers to the routine safety inspection conducted by F. A. Maura and A. M. Bongiovanni of this office on February 9-15, 1989, of integrated leak rate testing activities at Donald C. Cook Nuclear Plant, Units 1 and 2, authorized by NRC Operating Licenses No. DPR-58 and No. DPR-74, and to the discussion of our findings with W. G. Smith and T. Postlewait at the conclusion of the inspection.

The enclosed copy of our inspection report identifies areas examined during the inspection. Within these areas, the inspection consisted of a selective examination of procedures and representative records, observations, and interviews with personnel.

During this inspection, certain of your activities appeared to be in violation of NRC requirements, as specified in the enclosed Notice. A written response is required.

Additionally, Paragraph 6.a of the enclosed report describes a violation concerning the methodology of calculating the combined Type B and C leakage rates. It is our understanding that in addition to responding to the violation, you will be reviewing the combined leakage rates of the as found and as left Type B and C tests for the last Unit 1 refueling outage and for the previous and present Unit 2 refueling outage. We understand you will notify this office with your results on or before March 13, 1989.

It is also our understanding that you will conduct a detailed temperature survey prior to your next containment integrated leak rate test, presently scheduled for May 1989, which will address our concerns noted in Paragraph 2.d.

In accordance with 10 CFR 2.790 of the Commission's regulations, a copy of this letter, the enclosures, and your response to this letter will be placed in the NRC Public Document Room.
