Gentlemen:

On September 20, 1977 you submitted a report "Steam Generator Repair Report" which applied to the Turkey Point Plant Unit Nos. 3 and 4. Revision 1 to this report, which was submitted on December 20, 1977, included a section 3.5 entitled "Plant Security". This section refers to specific plans for physical protection of the plant during the repair period which "will be addressed as required".

The staff has the proposed security plans for the plant under review. Revision 0 dated October 24, 1978 is not yet approved, however it would require special procedures to be issued for special maintenance activities that involve unusually large numbers of people. Pending staff approval of Revision 0, we require that you commit to and prepare special security procedures applicable to the replacement of the steam generators. You should commit to the preparation of such procedures within ten (10) days of receipt of this letter and have them available for NRC inspection ninety (90) days prior to commencing the steam generator replacement activity.

Sincerely,

ORIGINAL SIGNED

7812110010

A. Schwencer, Chief
Operating Reactors Branch #1
Division of Operating Reactors
