U.S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Varga:

Re: Turkey Point Units 3 & 4
Docket Nos. 50-250 and 50-251
Proposed Fire Protection
Amendment Modification

Florida Power & Light has reviewed your letter dated September 17, 1981 concerning the following areas of our proposed Technical Specifications for fire protection. The following is our response to those items:

Item 1 (T.S. 3.14.3.a)

As requested we will propose a change to our Technical Specifications so that fire hose stations in the vicinity of safety related equipment shall be operable at all times when the safety related equipment in their area of protection is required to be operable; or within one hour the inoperable hose station shall be made operable or an equivalent capacity fire hose shall be run from an equivalent water source to the inoperable location.

Item 2. (T.S. Table 3.14-2)

As requested, we will propose a change to our Technical Specifications to include in our Technical Specifications a table indicating the appropriate hose stations protecting safety related areas.

Item 3. (T.S. 4.15.3.a.4)

As requested, we will propose a change to our Technical Specifications which would require testing our fire hoses at 150 psi or 50 psi above system pressure (whichever is greater).
