1. The purpose of this document is to provide a comprehensive overview of the current status of the project. It is intended for the use of management and other stakeholders who are involved in the project's execution.

2. The project has made significant progress since the last report. Key milestones have been achieved, and the team is on track to complete the project by the end of the year. However, there are still some challenges that need to be addressed.

3. The following table provides a detailed breakdown of the project's performance metrics. It includes information on budget, schedule, and quality. The data shows that the project is performing well overall, but there are some areas where improvement is needed.

4. Summary of key findings and recommendations.

5. Conclusion and next steps.

Office of Nuclear Reactor Regulation
Attention: Mr. Hugh L. Thompson, Jr., Director
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Thompson:

Re: Turkey Point Units 3 and 4
Docket Nos. 50-250 and 50-251
Maintenance and Surveillance Inspection

Upon request of the Turkey Point NRC Project Manager, Mr. D. G. McDonald, FPL verbally agreed to support inspections in mid-October and November relating to maintenance and surveillance activities and certain operational (train vs. unit) events.

Subsequent to FPL agreeing to these inspections, the Turkey Point Plant was selected for an in-depth integrated design inspection of its auxiliary feedwater system as a consequence of the Davis-Besse event, and for an IAEA safeguards inspection on Turkey Point Unit 4.

FPL is concerned that the impact these major programmatic inspections may have on key plant personnel (i.e. workload required in preparation for the inspections, inspector support, and in resolution of items identified during inspections) may be detrimental considering the short time interval in which they have been requested. Because of these additional inspections, FPL requests that the one-week maintenance and surveillance inspection be deferred until after the Unit 4 refueling outage, scheduled to begin January 1986.

If you have any questions regarding this request, please call us.

Very truly yours,

J. W. Williams, Jr.
Group Vice President
Nuclear Energy
