L-88-475

U. S. Nuclear Regulatory Commission
 Attn: Document Control Desk
 Washington, D.C. 20555

Gentlemen:

Re: Turkey Point Unit Nos. 3 and 4
 Docket Nos. 50-250 and 50-251
 Supplemental Response to NRC Bulletin
Potential Safety-Related Pump Loss

Florida Power & Light letter L-88-295 dated July 18, 1988 provided a partial response to NRC Bulletin 88-4 "Potential Safety-Related Pump Loss for Turkey Point". To complete the remaining portion of this bulletin, the results of hydraulic instability calculations are required from the individual safety-related pump manufacturers. Due to numerous requests for similar information from other utilities, the responses from the pump manufacturers originally requested for September 1, 1988, have been delayed. It is anticipated that FPL will receive the results of these calculations and the corresponding miniflow recirculation requirements by April 1, 1989. FPL will then develop a plan and schedule for the resolution of any concerns within 30 days of receipt of the miniflow recirculation requirements. The results and schedule for resolution of any hydraulic instability concerns will be provided by May 29, 1989.

If you have any questions or comments, please contact us.

Very truly yours,

W. F. Conway
 Senior Vice President - Nuclear

WFC/SDF/jr
