

APR 26 1983

Docket Nos. 50-250  
and 50-251

Dr. Robert E. Uhrig, Vice President  
Advanced Systems and Technology  
Florida Power and Light Company  
Post Office Box 14000  
Juno Beach, Florida 33408

Dear Dr. Uhrig:

By letter dated February 25, 1977, as revised April 28, 1977, December 9, 1977, April 10, 1978, November 15, 1978, March 6, 1979, September 18, 1979, October 15, 1980 and June 14, 1982, you submitted a proposed inservice inspection program description and request for relief from inspection requirements pursuant to 10 CFR 50.55a(g). The purpose of this letter is to inform you of the results of the staff review of your relief requests and to grant relief in part from the requirements of Section XI of the American Society of Mechanical Engineers Boiler and Pressure Vessel Code (the Code) or impose other requirements, as appropriate.

The review of requests for relief from the inservice inspection requirements has been completed. Based on the results of this review, the staff has determined there are cases in which relief can be granted from the examination requirements which we have determined to be impractical to perform and by granting relief, will not compromise the safety of Turkey Point Units 3 and 4.

Section 50.55a(g) of 10 CFR Part 50 requires that your program be revised at 120-month intervals with the start of commercial operation being the reference date. The start of the next interval for Unit 3 is December 14, 1982 and for Unit 4 is September 7, 1983. Your inservice inspection and testing program must be based on the edition and addenda of the Code incorporated by 10 CFR 50.55a(g) 12 months prior to these dates. Although the date of applicability of this Code edition and addenda has expired for Unit 3, the relief requests evaluated in this report may still be valid because all examinations required to be performed during the ten-year interval may not have been completed or because the examination requirements in the later edition and addenda of Section XI may be the same as those for which relief has been requested. The relief requests for the next 120-month inspection interval to be submitted for review should factor the information presented in this report into consideration. Any changes to your Technical Specifications are required to be submitted at least six months prior to the beginning of a 120-month interval and it is requested that any requests for relief from Code requirements be provided on the same schedule. The staff review of your relief requests for your next interval will be conducted

on a schedule based on the program-revision requirements for Units 3 and 4. Until that time you should follow your current inservice inspection program modified as described herein and by any further relief granted or additional testing imposed during the remainder of the period.

The enclosed Safety Evaluation (Enclosure 1) delineates those items for which relief has been granted and alternate schedules and procedures defined. The staff has determined that where stated the Code requirements are impractical, the granting of this relief is authorized by law and will not endanger life or property of the common defense and security, and is otherwise in the public interest considering the burden that could result if they were imposed on your facility.

A copy of the related Notice of Granting of Relief is enclosed.

Sincerely,

Original signed by:
