L-84-108

Office of Nuclear Reactor Regulation
Attention: Mr. S. A. Varga, Chief
Operating Reactors Branch #1
Division of Operating Reactors
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Varga:

Re: Turkey Point Units 3 and 4
Docket Nos. 50-250 and 50-251
Distribution System Voltages

Our letter L-84-25 dated January 31, 1984 provided revisions to our proposed license amendment associated with the review of adequacy of station electric distribution voltages at Turkey Point Units 3 and 4. Attached are further revisions to Table 3.5-2 and Table 3.5-4.

Table 3.5-2 is revised to add a requirement that allows single channel operation of the undervoltage devices on the 480V load centers, only if the inoperable channel is placed in the trip condition.

In this revision, the Instantaneous Setpoints for the 480V load center undervoltage devices are raised five volts on Table 3.5-4 (Sheet 2) to correct previously transmitted values. The actual settings on these relays, which had previously been installed on Unit 3, were reviewed and determined to be within the designated tolerances of the corrected design setpoints.

Should you or your staff have any questions on this information, please contact us.

Very truly yours,

for C. Woody
J. W. Williams, Jr.
Vice President
Nuclear Energy
