

February 6, 1985

Docket Nos. 50-250
and 50-251

LICENSEE: Florida Power and Light Company

FACILITY: Turkey Point Plant Units 3 and 4

SUBJECT: SUMMARY OF MEETING HELD WITH FLORIDA POWER AND LIGHT COMPANY,
(FPL), FEBRUARY 4, 1985, REGARDING TURKEY POINT PLANT TECHNICAL
SPECIFICATIONS

Background

Members of the NRC staff met with the licensee's representatives at Bethesda, Maryland, to discuss revision of the Turkey Point Plant Units 3 and 4 Technical Specifications. The licensee is in the process of converting the existing plant Technical Specifications to the format and content of the Standard Technical Specifications for Westinghouse Pressurized Water Reactors (NUREG-0452).

Summary

Details were discussed relating to the purpose for the revision, statues, plans and schedules, integration with ongoing efforts and procedures relating to licensing approval. The list of attendees, outline of the licensee's presentation, and NRR Office Letter No. 38 are enclosed.

This meeting was a followup to the initial meeting held August 23, 1984, in which both parties agreed that the proposed revision will not require plant hardware changes and will reflect the current Turkey Point Plant design and analytical basis. The licensee provided an update of status and indicated the effort is currently on schedule. The NRC staff indicated that the review of the proposed Technical Specifications will be in accordance with NRR Office Letter No. 38, Procedures For Revisions To Technical Specifications, as applied to licensed plants.

The proposed changes should be provided for the NRC staff review by the end of the year. The review process will include NRR review and independent audits by a contractor and the Regional staff. The overall review process should take approximately six months. As previously stated, the NRC licensing and Regional staff will work closely with the licensee's staff during all phases of this effort which will result in an overall improvement in the existing margin of safety for the Turkey Point Facility.
