Attention: Mr. S. A. Varga, Chief  
Operating Reactor's Branch #1  
Division of Operating Reactors

Dear Mr. Varga:

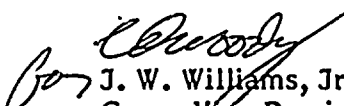

Re: Turkey Point Units 3 and 4  
Docket Nos. 50-250 and 50-251  
BART-WREFLOOD Input Revision

As you are aware, Westinghouse has revised the ECCS evaluation model procedure by which the core flooding rate information generated by the WREFLOOD code is introduced into the BART heat transfer coefficient calculation. Reanalysis of the Turkey Point Units 3 and 4 ECCS performance utilizing the revised procedure resulted in a higher peak clad temperature (PCT) than the previously calculated PCT of 1972°F.

As reported to the NRC by Westinghouse in a March 22, 1985 letter to Mr. D. G. Eisenhut, and as discussed at the prehearing conference of March 26, 1985, the new calculated PCT for Turkey Point Units 3 and 4 is 2051°F. This value is well below the 10 CFR 50.46 limit of 2200°. Analyses using the FLECHT correlation in lieu of the BART code had confirmed that the acceptance criteria in 10 CFR 50.46 had been met (PCT of 2130°F vs. the 2200° limit).

If you have any questions, please call us.

Very truly yours

  
J. W. Williams, Jr.  
Group Vice President
