Juno Beach, FL 33408

Gentlemen:

The Nuclear Regulatory Commission (NRC) Office for Analysis and Evaluation of Operational Data (AEOD) completed assessment of your Licensee Event Reports (LERs) for Turkey Point 3 and 4 as part of the NRC's Systematic Assessment of Licensee Performance (SALP) program. Please note that this assessment was performed for the period from April 1, 1986, to April 30, 1987; but the SALP appraisal period is from May 1, 1986, to May 31, 1987. This assessment is being forwarded at this time for your use and information in order to pattern future submittals.

In general, AEOD found an improvement in the Turkey Point LERs which used a refinement of the basic methodology presented in NUREG-1022, Supplement No. 2. Major strong points of the LERs are the discussions of the failure mode, mechanism, safety system responses, and effect of failed components. The principal weaknesses identified in the Turkey Point LERs involve the requirements to identify the root cause, to describe the corrective actions taken to reduce the probabilities of recurrence of the event, and to state the type of personnel involved in a personnel error and whether the error is cognitive or procedural. These findings are based on the requirements contained in 10 CFR 50.73.

Please let us know if you have any questions.

Sincerely,

Original Signed by
Luis A. Reyes
