Washington, D. C. 20555

Gentlemen:

Re: Turkey Point Units 3 and 4
Docket Nos. 50-250 and 50-251
Confirmatory Measurements Program

As requested by NRC Letter dated June 12, 1989, Florida Power & Light Company (FPL) has analyzed the unknown spiked samples received on July 20, 1989, at the Turkey Point Plant Chemistry Department. As instructed, the attached results were back-decay corrected to January 3, 1989.

As discussed by telephone on September 18, 1989 with Ms. Adamovitz of your staff, the results for Strontium-89 and 90 have been omitted, and will be provided by separate correspondence by October 31, 1989. The reason for omitting these results is discussed in the attachment.

Should there be any additional information needed, please contact us.

Very truly yours,

J. H. Goldberg
Executive Vice President

Attachment:

The following are the results of test samples received on July 20, 1989. The results are decay corrected to January 3, 1989.

<u>Nuclide</u>	<u>Value</u>	<u>% Uncertainties</u>
Tritium	2.35 E-5	10%
Fe 55	2.87 E-5	10%

As a part of the routine analysis program for Strontium determination, Quality Control (QC) samples are frequently analyzed with the sample of interest in order to validate the results. This methodology was applied for this test sample. The results of the QC sample indicated a mismatch between the expected and the measured values. A new standard (QC sample) is being prepared for reanalysis with the test sample in order to ensure the accuracy of the results. This analysis takes 2-4 weeks to perform. An amended report will be issued following reanalysis with the validated results.
