Gentlemen:

Subject: SYSTEMATIC ASSESSMENT OF LICENSEE PERFORMANCE
(NRC INSPECTION REPORT NOS. 50-250/91-41 AND 50-251/91-41)

The NRC Systematic Assessment of Licensee Performance (SALP) has been completed for your Turkey Point facility. The facility was evaluated for the period August 1, 1990, through September 28, 1991. The results of the evaluation are documented in the enclosed Initial SALP Report. This report will be discussed with you at a public meeting to be held at the Turkey Point facility at 10:00 a.m. on December 10, 1991.

The performance of your Turkey Point facility was evaluated in the functional areas of Plant Operations, Radiological Controls, Maintenance/Surveillance, Emergency Preparedness, Security, Engineering/Technical Support, Outage, and Safety Assessment/Quality Verification.

The assessment indicates superior performance was attained in the following areas: Plant Operations, Emergency Preparedness, Security, Outage, and Safety Assessment/Quality Verification. In addition, continued performance improvement was demonstrated in the areas of Radiological Controls and Maintenance/Surveillance. The assessment of outage performance as Category 1 was particularly significant since it covered the lengthy dual unit outage. The modifications, which should enhance the overall safety and security of the Turkey Point station, were well controlled and of high quality. Good contingency planning was also demonstrated during the extensive outage.

The assessment indicates that overall Turkey Point's performance continues to improve which is a continuation in trends noted over the past three SALP periods. Your managers and staff are to be commended.

Any comments you have concerning our evaluation of the performance of your Turkey Point facility should be submitted to this office within 30 days following the date of our meeting. These comments will be considered in the development of the Final SALP Report. Your comments and a summary of our meeting will be issued as an appendix to the Final SALP Report.
