SUBJECT: SYSTEMATIC ASSESSMENT OF LICENSEE PERFORMANCE (SALP)
(NRC INSPECTION REPORT NO. 50-250/96-99 AND 50-251/96-99)

Gentlemen:

The NRC Systematic Assessment of Licensee Performance (SALP) has been completed for your Turkey Point nuclear plant. The facility was evaluated for the period of August 28, 1994, through August 17, 1996. The results of the evaluation are documented in the enclosed SALP report. This report will be discussed with you at a public meeting to be held at the Turkey Point site on October 10, 1996, at 10:00 a.m. This SALP process assesses licensee performance in four functional areas: Plant Operations, Maintenance, Engineering, and Plant Support.

The level of safety performance at Turkey Point continued to be superior in all SALP functional areas for the second consecutive SALP period. This continued high level of performance resulted from dedication to continuous improvement and teamwork of all those associated with the operation of the facility. Senior managers continued to set high standards of safety performance, were involved in site activities, and made conservative decisions relative to operation of the facility. Self-assessment, quality verification, and associated corrective actions were effective in assuring that the high standards of performance continued at your Turkey Point facility. Turkey Point has coped well with change over this SALP cycle. It will be a continuing challenge to sustain superior performance with a high rate of change, and it is imperative that training and development programs remain effective.

We commend you and your staff for the continued superior level of performance.

In accordance with Section 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be placed in the NRC Public Document Room.
