Juno Beach, FL 33408

SUBJECT: NRC INTEGRATED INSPECTION REPORT NOS. 50-250/98-07 AND 50-251/98-07

Dear Mr. Plunkett:

On July 11, 1998, the NRC completed a safety inspection at your Turkey Point Units 3 & 4 reactor facilities. The enclosed integrated report presents the results of that inspection.

During the six-week period covered by this inspection, your conduct of activities at the Turkey Point facilities was generally characterized by safety-conscious operations, sound engineering and maintenance practices, and excellent plant support activities.

An apparent violation was identified and considered for escalated enforcement action in accordance with the "General Statement of Policy and Procedures for NRC Enforcement Actions" (Enforcement Policy), NUREG 1600. The apparent violation involved your identification that a failure to adequately separate non-safety and safety related electrical loads resulted in a potential for loss of power to some residual heat removal (RHR) motor operated valves required for the piggy back mode of RHR during a Loss of Coolant Accident. This apparent violation will be addressed in a separate correspondence.
