SUBJECT: NRC INSPECTION REPORT NOS. 50-250/98-09 AND 50-251/98-09

Dear Mr. Plunkett:

An NRC inspection was conducted July 27 - 31, and August 10 - 14, 1998, at your Turkey Point Units 3 and 4 reactor facilities. This was a Safety System Engineering Inspection (SSEI). The primary objective of this SSEI was to determine if the Auxiliary Feedwater (AFW) System was designed, operated, and maintained consistent with the design and licensing bases.

Overall, the inspection determined that the AFW system was designed, operated and maintained consistent with the design and licensing bases. The calculations to support system performance, although considered numerous, were adequate. The team found that modifications to the system met design and licensing basis requirements and no unreviewed safety questions had been introduced. The team found that the quality of the later plant modification packages had improved over earlier packages. Your pre-inspection self assessment on the system was very thorough and is considered a strength. In addition, the team also considered the detail of the design basis documentation to be a strength. The team also found that your corrective actions for AFW system related problems were applied in an effective manner.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.

Sincerely,

Original signed by
Kerry D. Landis
