Sequoyah Nuclear Plant, Units 1 and 2
Renewed Facility Operating License Nos. DPR-77 and DPR-79
NRC Docket Nos. 50-327 and 50-328

Watts Bar Nuclear Plant, Units 1 and 2
Facility Operating License Nos. NPF-90 and NPF-96
NRC Docket Nos. 50-390 and 50-391

Subject: **TENNESSEE VALLEY AUTHORITY - HYDROLOGIC ENGINEERING
CENTER RIVER ANALYSIS SYSTEM (HEC-RAS) PROJECT MILESTONE
STATUS UPDATE**

Reference: TVA letter to NRC, "Tennessee Valley Authority - Hydrologic Engineering
Center River Analysis System (HEC-RAS) Project Milestones," dated
June 22, 2016 (ML16175A518)

By letter dated June 22, 2016, Tennessee Valley Authority (TVA) provided NRC with dates for several project deliverables associated with the ongoing HEC-RAS external flood modeling project (referenced letter). The HEC-RAS external flood modeling project was the subject of an April 4, 2016 public meeting to discuss technical details and a resolution plan for TVA's HEC-RAS external flood modelling issues. In the referenced letter, TVA committed to provide updates on the status of the specific project deliverables on a six-month frequency.

The purpose of this letter is to provide the third written update regarding the status of the project milestones consistent with the commitment made in the referenced letter.

There has been no change in milestone status since the update provided by letter dated June 27, 2017 (ML17179A040), however, several milestone dates have been revised.

**TABLE 1
 PROJECT DELIVERABLE SUBMITTAL MILESTONES**

	Project Deliverable	Submittal Milestone
1	Browns Ferry Mitigating Strategies Assessment (MSA)	Complete
2	Sequoyah MSA	Complete
3	Watts Bar MSA	Complete
4	Watts Bar Focused Evaluation (FE)	June 2018
5	Sequoyah FE	June 2018
6	Browns Ferry FE	June 2018
7	Sequoyah Hydrology License Amendment Request (LAR)	July 2018
8	Watts Bar Hydrology LAR	August 2018

The calculations, analyses, and evaluations being performed in support of Tasks 4 - 8 are fundamentally based on precipitation values in Topical Report TVA-NPG-AWA16, "TVA Overall Basin Probable Maximum Precipitation and Local Intense Precipitation Analysis, Calculation CDQ000000201600041." This topical report was submitted to NRC for review by letter dated September 20, 2016. As there are several technical issues still being reviewed by NRC, the milestone dates for Tasks 4 - 8 have been revised to reflect TVA's current estimate of resolution of the technical issues mentioned above, and completion of the corresponding analyses and evaluations in support of these tasks. Any significant revisions to the Topical Report would likely have additional impacts to the HEC-RAS milestone schedule based on required rework.

December 21, 2017

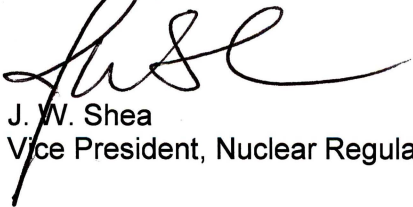

The projected milestones for the submittal of the Sequoyah and Watts Bar Hydrology LARs are subject to communications with the NRC Project Manager.

TVA will provide the fourth status update on these project deliverable submittal milestones by June 30, 2018, consistent with the Commitment made in the referenced letter.

There are no new regulatory commitments contained in this letter.

If additional information is needed regarding this update, please contact Russell Thompson at (423) 751-2567.

Respectfully,

J. W. Shea
Vice President, Nuclear Regulatory Affairs and Support Services
