19990018	6/23/99	F	32.7	A	2	<p>The cause of the rod drop, that required manual reactor trip, was failure of a Stationary Gripper circuit card in the Rod Control System. The card failure was due to fracture of a solder terminal post. Failure of the card caused the group 1 rods in Shutdown Bank B to be released by their Stationary Gripper Coils, allowing the rods to drop into the core.</p> <p>Corrective actions included inspections and repairs of Stationary Gripper circuit cards and Post Maintenance Testing.</p> <p>A Licensee Event Report (No. 1999-001-00) is being prepared for submittal to the NRC.</p>
