MODES 3 & 4 LOCA EVALUATIONS  
CDR ITEM 232

Dear Dr. Grace:

On August 15, 1986, CP&L notified the NRC (Mr. L. Mellen) of a potentially reportable item per the provisions of 10CFR50.55(e) and 10CFR, Part 21. The NRC was informed that Westinghouse had notified CP&L of a potential unreviewed issue relating to a Loss of Coolant Accident occurring during Modes 3 & 4. In CP&L's September 11, 1986 letter (HO-860346(O)) to the NRC, we projected that a reportability determination and final report would be issued by July 1, 1987.

CP&L continues to pursue resolution of this generic issue through the Westinghouse Owners Group (WOG) as committed to in CP&L letter (NLS-86-320) dated August 26, 1986. We had originally anticipated that the WOG effort would conclude by mid-1987, however, discussion on methodology is still ongoing between NRR and WOG. We are unable to define a completion date for this item, but will continue to follow through the WOG effort and implement the WOG resolution. At that time, CP&L will formally notify you of the Shearon Harris specific resolution of this issue.

Thank you for your consideration in this matter.

Yours very truly,

*R. A. Watson*
