IMPLEMENTATION STATUS OF TMI ACTION PLAN ITEMS

Gentlemen:

The information attached responds to your request of April 14, 1989 regarding the status of the identified TMI Action Plan Items. Please note that the time provided to determine the status of implementation of all TMI items as required by your request has been extremely short and that significant personnel burden has been involved. Moreover, the attached notations regarding status of individual items are necessarily brief and cannot address all of the details of the more complex issues. Taking these constraints into account, I certify that to the best of my knowledge the attached information is correct.

Please refer any questions regarding this submittal to Mr. M. R. Oates at (919) 546-6063.

Yours very truly,

L. W. Eury  
Executive Vice President  
Power Supply

LWE/JHE/crs (306CRS)

NOTES TO TMI ITEM STATUS TABLE

Note 1:

SHNPP has fully implemented the requirements for an SPDS with the exception that one Human Engineering Discrepancy (HED No. 31G1-6019) remains outstanding. A modification to correct this HED is currently in progress and scheduled to be completed by May 19, 1989.

Note 2:

SHNPP has completed all required actions for this item, however the NRC has not yet issued a final Safety Evaluation Report (SER). If additional requirements are identified in the final SER, CP&L will address them at that time.

GUIDELINES FOR UPDATING TMI STATUS

1. The enclosure provides a complete listing of all TMI requirements from NUREG-0737 and NUREG-0737 Supplement 1. Regulatory Guide 1.97 requirements, although addressed in Supplement 1 to NUREG-0737, are excluded since they did not originate from the TMI Action Plan. This listing consists of a matrix of items applicable to both operating reactors and operating license applicants (NTOLS) as of November, 1980, as shown in NUREG-0737 Enclosure 1 and 2, respectively. All items which are not listed identically in Enclosure 1 and 2 are marked with asterisks to indicate differences between operating reactor and NTOL requirements. Whenever these differences occur, enter data in accordance with the appropriate title, regardless of the TMI Action Plan item number listed. Your NRC Project Manager has indicated which issues are shown as unimplemented in the NRC tracking system. Please review the entire listing for each licensed reactor unit. Where an item was not applicable for your facility, mark N/A in the implementation status column.
2. Where an item was applicable to your facility but no changes were necessary, mark NC in the implementation status column.
3. Where an item was applicable to your facility and changes are complete mark C in the implementation status column. If the date is readily available (month and year) we request you provide it, however, C is sufficient.
4. Where an item was applicable to your facility and is not fully implemented, provide your projected implementation date (month and year) and a short note identifying the outstanding item (e.g. hardware, procedures, training, technical specifications). I - Mark for Incomplete
