NRC Assigns New Resident Inspector To FitzPatrick Nuclear Plant

Nuclear Regulatory Commission officials in King of Prussia, Pa., have selected Gregory F. Stock as the new resident inspector at the James A. FitzPatrick nuclear power plant. He joins Senior Resident Inspector Ken Kolaczyk at the plant in Scriba, N.Y. The plant is operated by Exelon Generation.

Stock was most recently a resident inspector at the Nine Mile Point nuclear plant in Scriba. Prior to joining the NRC in 2013 as a project engineer, Stock worked at the Norfolk Naval Shipyard, specializing in propulsion machinery. He earned a bachelor's degree in mechanical engineering from Penn State University.

“Greg is a good addition to the resident staff at FitzPatrick. His training and experience will help ensure the plant continues to meet the high safety standards set by this agency,” said NRC Acting Region I Administrator David Lew.

Each U.S. commercial nuclear plant site has at least two NRC resident inspectors. They serve as the agency's eyes and ears at the facility, conducting daily inspections, monitoring major work projects, and interacting with plant workers and the public.
