***** THE END *****

WCP

The first part of the document discusses the importance of maintaining accurate records. It emphasizes that proper record-keeping is essential for the efficient operation of any organization. The text highlights the need for a systematic approach to data collection and storage, ensuring that information is readily accessible and secure.

In the second section, the author explores various methods for organizing data. It compares different filing systems, such as alphabetical, numerical, and chronological, and discusses their respective advantages and disadvantages. The text also touches upon the use of digital databases and the challenges associated with data migration and backup.

The third part of the document focuses on the role of records in legal and regulatory compliance. It explains how well-maintained records can serve as evidence in court proceedings and help organizations avoid penalties for non-compliance. The author provides examples of common regulatory requirements and offers practical advice on how to meet them.

The fourth section discusses the impact of records on business decision-making. It argues that a comprehensive record of past actions and outcomes can provide valuable insights into trends and patterns, enabling managers to make more informed choices. The text also addresses the issue of record retention, explaining how long different types of records should be kept and the consequences of premature disposal.

In the fifth part, the author examines the challenges of managing records in a global context. It discusses the differences in record-keeping practices across various cultures and legal systems, and offers strategies for ensuring consistency and interoperability. The text also touches upon the issue of data privacy and the need to comply with international regulations like the GDPR.

The final section of the document provides a summary of the key points discussed and offers some concluding thoughts on the future of records management. It predicts that as technology continues to advance, the role of records will become increasingly important, and organizations must adapt to these changes to remain competitive.

The document concludes with a call to action, urging organizations to take a proactive approach to records management. It emphasizes that investing in a robust records management system is not just a cost, but a strategic investment that can yield significant long-term benefits. The author encourages readers to consult with experts and stay up-to-date on the latest developments in the field.

Overall, the document provides a comprehensive overview of records management, covering its importance, various methods, legal implications, and future trends. It is a valuable resource for anyone involved in organizational operations, particularly those responsible for data and information management.

RE: Docket No. 50-220

Dear Mr. Grier:

In accordance with Nine Mile Point Nuclear Station Unit #1
 Technical Specifications, we hereby submit Licensee Event Report,
 LER 78-28, which is in violation of Section 4.1.4c of the
 Technical Specifications.

This report was completed in the format designated in
 NUREG-0161, dated July 1977.

Very truly yours,

RE: Docket No. 50-220
LER 78-028/03L-0

Dear Mr. Grier:

Technical Specification 4.1.4b requires that at least once per quarter Core Spray pump operability shall be checked. In addition, Paragraph 4.1.4c requires that at least once per quarter the operability of power-operated valves required for proper Core Spray System operation shall be checked.

Both of these surveillance requirements are accomplished by the performance of N1-ST-Q1, performed at quarterly intervals adjusted plus or minus 25% to accommodate normal operating and test schedules as allowed by Technical Specification 1.15.

Surveillance Test N1-ST-Q1 was scheduled to be performed on 2/12/78 for the first quarter, and on 5/12/78 for the second quarter. On 1/21/78, the isolation valve operability portion of this test was completed, with the remainder (pump operability) completed on 2/15/78.

The second quarter test was completed on 5/22/78, which was within the allowable interval for the surveillance test and for surveillance requirement 4.1.4b, but it was nine days late for the power-operated valve operability test (4.1.4c). This tardiness resulted from the use, by the Operations' Department, of the completion date for the surveillance test (i.e. the date the pump test completed N1-ST-Q1) rather than using the completion date of the most restrictive portion of the surveillance test (i.e. the valve operability tests conducted early).

Shift Supervisors have been reminded of the importance of tracking those surveillance tests whose testing frequency may be altered by normal plant operation, especially when more than one surveillance requirement is satisfied by the surveillance test. In addition, the third quarter's test has been rescheduled to accommodate the 3.25x test interval as defined in Technical Specification 1.15.

Very truly yours,
