1. *Pharmaceutical industry* – The pharmaceutical industry is a major contributor to the U.S. economy, with sales of over \$200 billion in 2000. The industry is characterized by high research and development costs, long time to market, and high barriers to entry. The industry is also heavily regulated by the FDA.

2. *Healthcare providers* – Healthcare providers, including hospitals, clinics, and physicians, are the primary users of pharmaceuticals. They are responsible for diagnosing and treating patients, and for ensuring that patients receive the most appropriate and effective treatment.

3. *Insurance companies* – Insurance companies play a significant role in the pharmaceutical market, as they are responsible for paying for the majority of pharmaceutical costs. They are also involved in negotiating prices with pharmaceutical manufacturers.

4. *Government* – The government is a major player in the pharmaceutical market, as it is responsible for regulating the industry and for providing funding for research and development. The government is also involved in negotiating prices with pharmaceutical manufacturers.

5. *Patients* – Patients are the ultimate beneficiaries of pharmaceuticals, and they play a role in the market by choosing which products to use. Patients are also responsible for paying for their own care, either through insurance or out-of-pocket.

The pharmaceutical market is a complex and dynamic one, with many different players and interests. Understanding the market is essential for anyone who wants to succeed in the industry.
