## General Comment

With the resources available to the NRC you should be required BY LAW to put notice for public comment in every single mailbox of every resident within 50 miles that will be irreparably harmed by this decision when the leaks begin. The fact that you did not do this shows negligence on your part and this will be a key point in the legal proceedings to follow.

Your job is to protect the population from the exact kind of damage that will occur should this decision move forward. You are derelict in your duties as is evidenced by your recent lack of integrity with the public on the entire San Onofre operation with SCE. And now your direct actions which will, if completed, irreparably harm all life not only in Southern California but the entire western hemisphere of Planet Earth.

There is not one sentence in your plan to provide real safety to any of the citizens who are literally trusting you and the NRC with their lives and lives of their future grandchildren who have yet to be born and therefore have no voice.

The storage containers are to be stored 108 feet from high tide and just above the water table,

which is the exact opposite of what any true engineer with integrity will tell you is a good operational plan for the safety of the people and life in Southern California for centuries moving forward.

We the people have been showing up to the meetings, writing letters, raising awareness, and still you and the decision makers at the NRC are violating the wishes of the public and I believe you will be convicted of violating the law as well before this issue is resolved. Every single name of every single decision maker, and person who follows the orders to carry out this atrocity against humanity will be convicted to the best of our collective ability. We understand that you are creating a legal framework right now that would distance you from responsibility with this decision, this will be your greatest downfall as it shows intent to do harm. This will be proven in a court of law.

You still have a chance to do the right thing for your families and ours. This material can be moved to another offsite storage facility which has been designed specifically for this purpose and was submitted in the original plans to build San Onofre to begin with. SCE has the resources to make this happen, and you have the responsibility to make sure that the best decision is made, and we the people will hold you personally, professionally, and legally accountable.

May you and all of the NRC reverse this tragic direction and serve the people you are intended to protect not profiteers intent on neglecting their responsibility at the inevitable cost of massive human life.
