Dear Mr. Chairman:

I am writing in regard to the enclosed
correspondence from Mr. John T. Kauffman of
Allentown, Pennsylvania.

Pennsylvania Power & Light Company is
facing some difficulties with the supply of nuclear
fuel for their Susquehanna plant and I would
greatly appreciate any comments or information
you may be able to provide pertaining to this inquiry.

With kind personal regards, I am

Sincerely yours,

Fred B. Rooney, M.C.

Mr. William A. Anders, Chairman
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Chairman:

It has been brought to my attention by Mr. Ralph Deuster, President of Nuclear Fuel Services, Inc. (NFS) that two major events have taken place recently which may seriously delay start-up of the NFS reprocessing plant and, in turn, have a serious detrimental effect on the supply of reload fuel for our Susquehanna Plant. These events are the letter of Mr. Edson Case of the NRC relating to the possibility that the NFS final environmental statement may not be issued until the GESMO action is completed and the letter by Mr. R. W. Peterson stating that the Council on Environmental Quality believes that the GESMO Draft Impact Statement does not meet the requirements of the National Environmental Policy Act.

We are not in a position to discuss the merits of these two actions, but we feel the issues should be attacked on an urgent basis and with consideration of the total impact on the U.S. Energy Supply. We have already seen NFS' projected operating date delayed by a year since we began negotiations with them last September (culminating in a contract signed in January). That delay, plus those which the above two letters might provoke, could prevent us from obtaining hoped for plutonium purchases in 1982 or recycle of our own plutonium in 1984.

We would then need additional U_3O_8 and enrichment with both the prices and sources uncertain. A negative ruling on plutonium recycle would also considerably increase our needs for U_3O_8 even though the need for additional enrichment would then be satisfied by the contingency plan in our enrichment contracts. These problems are recognized as common in the industry just as it is recognized that reasonable caution in the utilization of plutonium is necessary. We admit that readily acceptable solutions are hard to find and we assume you are already using all due effort to schedule the hearings and make the judgments necessary to get plutonium recycle approved and reprocessing plants licensed under proper conditions.

As one additional suggestion, we offer the concept of providing for plutonium safeguards by an adequate armed force both for transportation

Mr. William A. Anders

March 26, 1975

Page 2

and for guarding the reprocessing plants and fabrication facilities. Right now, a large enough force could be dedicated so that it would be immediately clear to all that it would be adequate. As time went on, more detailed studies and hearings could perhaps justify a major reduction in the force. Meanwhile, the plants could be in operation and the resultant electrical energy available.

As another suggestion, we believe that reprocessing plants could be licensed without waiting for the GESMO decision. Although this would result in production of plutonium which could partially frustrate a negative decision on plutonium recycle, the plutonium would then be located only in a few, very easy to guard, plants. Also, a negative GESMO decision should be regarded as only a temporary situation because better safeguards technology or future acute need for plutonium could provide the impetus to reverse such a negative decision.

It is, of course, possible that without plutonium recycle some reprocessors would not want to go ahead with their plans. However, the way should be paved for reprocessing licenses on their own merits so that a significant amount of time could be saved if the reprocessor does decide to go ahead.

Thank you for your consideration in these matters.

Very truly yours,

John T. Kauffman
Vice President - System Power & Engineering

Central Pennsylvania Committee on
Nuclear Power

119 E. Aaron Drive
State College, Pa., 16801

31 March 1975

Directorate of Regulation
U.S. Nuclear Regulatory Commission
Washington, D.C., 20545

Gentlemen:

In view of the fire which burned control cables of the emergency core cooling system at the Browns Ferry plant on 22 March 1975, and that the Peach Bottom units 2 and 3 located in York County, Pa. are of identical design, the Central Pennsylvania Committee on Nuclear Power requests that you suspend operations at Peach Bottom units 2 and 3 until such time as the control wiring can be made fireproof.

Furthermore since four more identical units are under construction in Pennsylvania at Montgomery County: Limerick 1 and 2, and at Luzerne County: Berwick 1 and 2, the Central Pennsylvania Committee on Nuclear Power requests that the control wiring to be installed in these plants be fireproof also.

These requests are made in light of your power under 10 C.F.R. 50.100 to revoke licenses and permits, and the provisions of the Administrative Procedure Act.

Sincerely Yours,

William A. Lochstet
