During surveillance testing while the plant was shutdown for refueling, a switch on LIS-3-56B, which trips the reactor recirculation pump motor generator, failed to operate.

Conditions Prior to Occurrence:

The reactor was shut down for refueling.

Action specified in the Technical Specification Surveillance Requirements met due to inoperable equipment. Describe.

None

Apparent Cause of Occurrence:

Instrument drift.

Analysis of Occurrence:

Since the redundant switch was operable, the reactor shutdown, and the recirculation pump not operating, no problem was incurred.

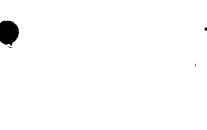

Corrective Action:

The switch was recalibrated and functionally tested.

Failure Data:

259/7437 and 296/7724.
