Mr. D. G. Eisenhut, Director
Division of Licensing
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Eisenhut:

This letter is to confirm understandings reached with the NRC regarding licensing submittals for the QUAD+ demonstration assemblies and the NRC review of such submittals. These understandings were reached during the joint TVA-Westinghouse demo licensing meeting with the NRC on February 24, 1983. The following licensing plan and sequence of events was agreed to:

1. Westinghouse will submit a generic QUAD+ demonstration assemblies licensing topical for NRC review about two months prior to TVA's submittal of the Browns Ferry Unit 2 Cycle 6 reload licensing supplement.
2. TVA will reference this generic report in their reload licensing supplement for Browns Ferry Unit 2 Cycle 6. TVA will submit the reload supplement about four months prior to the expected criticality date of Browns Ferry Unit 2 Cycle 6.
3. The NRC review of the demo licensing topical will be consistent with the schedule of Browns Ferry Unit 2 Cycle 6. This review will be consistent with the level of review applicable to demonstration programs, conforming to the NRC policy of encouraging such programs, and being differentiated from the level of review performed for a full reload of a new fuel design.
4. TVA will issue a letter to the NRC at the time of the submittal of the demo licensing topical by Westinghouse linking the topical to the Browns Ferry Unit 2 Cycle 6 reload to assure review of the demo topical consistent with the licensing schedule for the Browns Ferry Unit 2 Cycle 6 reload.

Very truly yours,

for E. P. Rahe, Jr., Manager
Nuclear Safety Department
