The first part of the document discusses the general principles of the project. It outlines the objectives and the scope of the work. The second part describes the methodology used in the study, including the data collection and analysis techniques. The third part presents the results of the study, which show a significant correlation between the variables being investigated.

The results of the study indicate that there is a strong positive relationship between the variables. This finding is consistent with the theoretical framework proposed in the introduction. The data suggests that as one variable increases, the other variable also tends to increase, supporting the hypothesis of the study.

In conclusion, the study has provided valuable insights into the relationship between the variables. The findings suggest that the theoretical model is supported by the empirical data. Further research is needed to explore the underlying mechanisms of this relationship and to test the model in different contexts.

TENNESSEE VALLEY AUTHORITY

CHATTANOOGA, TENNESSEE 37401

400 Chestnut Street Tower II

October 24, 1985

Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Denton:

In the Matter of the) Docket Nos. 50-259
Tennessee Valley Authority) 50-260
50-296

In accordance with the requirements of 10 CFR Part 50.54(s)(1), enclosed are 10 copies of the Tennessee Emergency Management Agency Multi-Jurisdictional Emergency Response Plan for the Browns Ferry Nuclear Plant dated October 4, 1985.

If you have any questions, please call R. E. Alsup at FTS 858-2725.

Very truly yours,

TENNESSEE VALLEY AUTHORITY

J. A. Domer
J. A. Domer, Chief
Nuclear Licensing Branch

Sworn to and subscribed before me
this 24th day of October 1985.

Paulette H. White
Notary Public
