

UNITED STATES NUCLEAR REGULATORY COMMISSION WASHINGTON, D. C. 20555

TENNESSEE VALLEY AUTHORITY

DOCKET NO. 50-259

BROWNS FERRY NUCLEAR PLANT, UNIT 1

AMENDMENT TO FACILITY OPERATING LICENSE

Amendment No. 125 License No. DPR-33

- 1. The Nuclear Regulatory Commission (the Commission) has found that:
 - A. The application for amendment by Tennessee Valley Authority (the licensee) dated April 8, 1985, complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations set forth in 10 CFR Chapter I;
 - B. The facility will operate in conformity with the application, the provisions of the Act, and the rules and regulations of the Commission;
 - C. There is reasonable assurance (i) that the activities authorized by this amendment can be conducted without endangering the health and safety of the public, and (ii) that such activities will be conducted in compliance with the Commission's regulations;
 - D. The issuance of this amendment will not be inimical to the common defense and security or to the health and safety of the public; and
 - E. The issuance of this amendment is in accordance with 10 CFR Part 51 of the Commission's regulations and all applicable requirements have been satisfied.
- 2. Accordingly, the license is amended by changes to the Technical Specifications as indicated in the attachment to this license amendment and paragraph 2.C(2) of Facility Operating License No. DPR-33 is hereby amended to read as follows:

8601020493 851218 PDR ADOCK 05000259 PDR PDR

(2) <u>Technical Specifications</u>

The Technical Specifications contained in Appendices A and B, as revised through Amendment No. 125, are hereby incorporated in the license. The licensee shall operate the facility in accordance with the Technical Specifications.

3. This license amendment is effective 90 days from the date of issuance.

FOR THE NUCLEAR REGULATORY COMMISSION

Daniel R. Muller, Director BWR Project Directorate #2 Division of BWR Licensing

Attachment: Changes to the Technical Specifications

Date of Issuance: December 18, 1985

	Turbine Stop Valve Closure	A	Note (5)	Note (5)

NOTES FOR TABLE 3.2.A

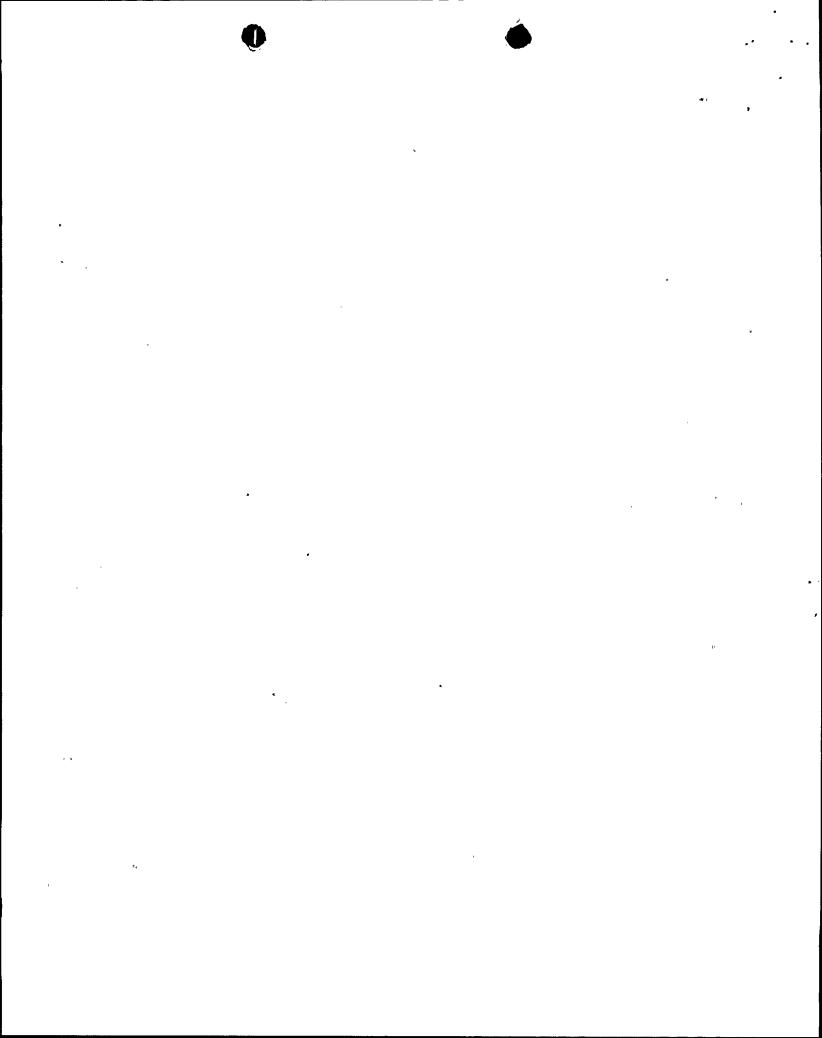

1. Whenever the respective functions are required to be operable, there shall be two operable or tripped trip systems for each function.

If the first column cannot be met for one of the trip systems, that trip system or logic for that function shall be tripped (or the appropriate action listed below shall be taken). If the column cannot be met for all trip systems, the appropriate action listed below shall be taken.

- A. Initiate an orderly shutdown and have the reactors in Cold Shutdown Condition in 24 hours.
- B. Initiate an orderly load reduction and have Main Steam Lines isolated within eight hours.
- C. Isolate Reactor Water Cleanup System.
- D. Isolate Shutdown Cooling
- E. Initiate primary containment isolation within 24 hours.
- F. The handling of spent fuel will be prohibited and all operations over spent fuels and open reactor wells shall be prohibited.
- G. Isolate the reactor building and start the standby gas treatment system.
- H. Immediately perform a logic system functional test on the logic in the other trip systems and daily thereafter not to exceed 7 days.
- I. No action required. Reactor zone walls and ceiling designed above suction pressure of the SGTS.
- J. Withdraw TIP.
- K. Manually isolate the affected lines. Refer to section 4.2.E for the requirements of an inoperable system.
- L. If one SGTS train is inoperable take actions H or action A and F. If two SGTS trains are inoperable take actions A and F.
- 2. When it is determined that a channel is failed in the unsafe condition, the other channels that monitor the same variable shall be functionally tested immediately before the trip system or logic for that function is tripped. The trip system or the logic for that function may remain untripped for short periods of time to allow functional testing of the other trip system or logic for that function.
- 3. There are four sensors per steam line of which at least one sensor per trip system must be operable.
- 4. Only required in Run Mode (interlocked with Mode Switch).
- 5. Not required in Run Mode (bypassed by mode switch).

LIMITING CONDITIONS FOR OPERATION

SURVEILLANCE REQUIREMENTS

3.11 FIRE PROTECTION SYSTEMS

Applicability: Applies to the operating status of the applicable fire suppression and/or detection systems for the reactor building, diesel generator buildings, control bay, intake pumping station, cable tunnel to the intake pumping station, and cable trays along the south wall of the turbine building, elevation 586.

Objective:

To assure availability of Fire Protection Systems.

Specification:

- A. <u>High Pressure Fire</u> Protection System
 - 1. The High Pressure Fire Protection System shall have:
 - a. Two (2) high pressure fire pumps operable and aligned to the high pressure fire header.
 - b. Automatic initiation logic operable.

4.11 FIRE PROTECTION SYSTEMS

Applicability: Applies to the surveillance requirements of the applicable fire suppression and/or detection systems for the reactor building, diesel generator buildings, control bay, intake pumping station, cable tunnel to the intake pumping station, and cable trays along the south wall of the turbine building, elevation 586 when the corresponding limiting conditions for operation are in effect.

Objective:

To verify the operability of the Fire Protection Systems.

Specification:

- A. <u>High Pressure Fire</u> Protection System
 - 1. High Pressure Fire Protection System Testing:

Item

Frequency

- a. Simulated Once/year automatic and manual actuation of high pressure pumps and automatic valve operability
- c. Deleted
- d. Pump Once/3 year capability

BROWNS FERRY NUCLEAR PLANT, UNIT 2

AMENDMENT TO FACILITY OPERATING LICENSE

Amendment No. 120 License No. DPR-52

- 1. The Nuclear Regulatory Commission (the Commission) has found that:
 - A. The application for amendment by Tennessee Valley Authority (the licensee) dated April 8, 1985, complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations set forth in 10 CFR Chapter I;
 - B. The facility will operate in conformity with the application, the provisions of the Act, and the rules and regulations of the Commission;
 - C. There is reasonable assurance (i) that the activities authorized by this amendment can be conducted without endangering the health and safety of the public, and (ii) that such activities will be conducted in compliance with the Commission's regulations;
 - D. The issuance of this amendment will not be inimical to the common defense and security or to the health and safety of the public; and
 - E. The issuance of this amendment is in accordance with 10 CFR Part 51 of the Commission's regulations and all applicable requirements have been satisfied.
- 2. Accordingly, the license is amended by changes to the Technical Specifications as indicated in the attachment to this license amendment and paragraph 2.C(2) of Facility Operating License No. DPR-52 is hereby amended to read as follows:

(2) <u>Technical Specifications</u>

The Technical Specifications contained in Appendices A and B, as revised through Amendment No. 120, are hereby incorporated in the license. The licensee shall operate the facility in accordance with the Technical Specifications.

3. This license amendment is effective 90 days from the date of issuance.

NOTES FOR TABLE 3.2.A

1. Whenever the respective functions are required to be operable, there shall be two operable or tripped trip systems for each function.

If the first column cannot be met for one of the trip systems, that trip system or logic for that function shall be tripped (or the appropriate action listed below shall be taken). If the column cannot be met for all trip systems, the appropriate action listed below shall be taken.

- A. Initiate an orderly shutdown and have the reactors in Cold Shutdown Condition in 24 hours.
- B. Initiate an orderly load reduction and have Main Steam Lines isolated within eight hours.
- C. Isolate Reactor Water Cleanup System.
- D. Isolate Shutdown Cooling
- E. Initiate primary containment isolation within 24 hours.
- F. The handling of spent fuel will be prohibited and all operations over spent fuels and open reactor wells shall be prohibited.
- G. Isolate the reactor building and start the standby gas treatment system.
- H. Immediately perform a logic system functional test on the logic in the other trip systems and daily thereafter not to exceed 7 days.
- I. No action required. Reactor zone walls and ceiling designed above suction pressure of the SGTS.
- J. Withdraw TIP.
- K. Manually isolate the affected lines. Refer to section 4.2.E for the requirements of an inoperable system.
- L. If one SGTS train is inoperable take actions H or action A and F. If two SGTS trains are inoperable take actions A and F.
- 2. When it is determined that a channel is failed in the unsafe condition, the other channels that monitor the same variable shall be functionally tested immediately before the trip system or logic for that function is tripped. The trip system or the logic for that function may remain untripped for short periods of time to allow functional testing of the other trip system or logic for that function.
- 3. There are four sensors per steam line of which at least one sensor per trip system must be operable.
- 4. Only required in Run Mode (interlocked with Mode Switch).
- 5. Not required in Run Mode (bypassed by mode switch).

3.11 FIRE PROTECTION SYSTEMS

Applicability: Applies to the operating status of the applicable fire suppression and/or detection systems for the reactor building, diesel generator buildings, control bay, intake pumping station, cable tunnel to the intake pumping station, and cable trays along the south wall of the turbine building, elevation 586.

Objective:

To assure availability of Fire Protection Systems.

Specification:

- A. <u>High Pressure Fire</u> <u>Protection System</u>
 - 1. The High Pressure Fire Protection System shall have:
 - a. Two (2) high pressure fire pumps operable and aligned to the high pressure fire header.
 - b. Automatic initiation logic operable.

4.11 FIRE PROTECTION SYSTEMS

Applicability: Applies to the surveillance requirements of the applicable fire suppression and/or detection systems for the reactor building, diesel generator buildings, control bay, intake pumping station, cable tunnel to the intake pumping station, and cable trays along the south wall of the turbine building, elevation 586 when the corresponding limiting conditions for operation are in effect.

Objective:

To verify the operability of the Fire Protection Systems.

Specification:

- A. <u>High Pressure Fire</u> Protection System
 - 1. High Pressure Fire Protection System Testing:

Item

Frequency

- a. Simulated Once/year automatic and manual actuation of high pressure pumps and automatic valve operability
- b. Pump Once/month Operability
- c. Deleted
- d. Pump Once/3 year capability
