## General Comment

Docket ID NRC-2017-0211

As a southern California resident, I am extremely concerned about the nuclear waste at San Onofre and Diablo Canyon!

It is critical that if we are going to have interim storage of high burn-up fuel, and since we currently do not have a "safe" place to transport it to or store it yet, we must put the material in Thick Casks like they do in Germany.

This way we can transport it when it cools sufficiently and the fear of sea level encroachment and earthquakes will be dealt with as we will be able to monitor the thicker high tech casks while looking for a more viable storage solution.

I support Donna Gilmore's research at SanOnofreSafety.org

Please take action to avert a potential disaster!

Money and careful planning now will proactively mitigate a disaster

Thank you,

Daryl Gale
