Patricia Silva, Chief  
Inspections and Operations Branch  
Division of Spent Fuel Management  
Office of Nuclear Material Safety and Safeguards  
United States Nuclear Regulatory Commission  
Washington, D.C. 20555-0001

Dear Ms. Silva:

This letter is in response to your letter to me dated December 22, 2017 Subject: Part 71 Quality Assurance program Approval Biennial Change Report.

The State University of New York at Buffalo would like to terminate our Part 71 Quality Assurance Program approval. We no longer require this program since we no longer possess material that would require the QA Program for shipments.

We shipped all of our Research reactor fuel in 2006 and proceeded with Decommissioning activities for our facility. We are presently awaiting final approval of the facility Final Status Survey and termination of our license.

Therefore we no longer require a Quality Assurance program.

If you have any questions or require further information, please contact either Mark Adams ([msadams@buffalo.edu](mailto:msadams@buffalo.edu); 716 829-5802) or David Vasbinder ([dvasbind@buffalo.edu](mailto:dvasbind@buffalo.edu); 716 829-5813).

Sincerely,

A handwritten signature in black ink, appearing to read 'J. Raab', written over a light blue horizontal line.

Joseph Raab, EHS Director
