General Comment

Thin cans are you even serious? This has got to be a joke! You have already violated laws and our trust for letting unlimited amounts of spent fuel to be stored not only on a beach, but over fault lines, with little security. Haven't you put us at enough risk? Who do you really work for? This amount of fuel was not originally allowed to be stored on sight. Then you allow them to have secret meetings in Poland? What the mother of Peter are you guys doing? You all need to be fired and replaced with people who live here and understand the logic involved with storing Spent nuclear fuel rods on a beach, with a small wall, over a fault line and within a few miles of a military bombing range that explodes the MOAB. It's the bomb one step under nuclear bombs. How crazy are you people?
