General Comment

I'm wondering why you'd seriously consider using thin temporary storage containers instead of thick casks used by other countries. I don't even think nuclear is safe under any circumstances, but it's very troubling when it's used without adequate safety measures like thin canisters.

There are organizations and individuals like the SanOnofreSafety.org groups and the comment submitted by Donna Gilmore.

Please do not use thin canisters. It's the least you can do to show concern for your children and grandchildren who will have to deal with the consequences of nuclear waste and exposure to it when there's an accident or inevitable decay of any containers.
